Part A

Part A: For teachers

1. What IDEA is

IDEA (Initiative for Digital Education in Africa) is a charity based in Belgium. It puts offline computer systems in rural schools. Everything works from a small computer in the school, without internet.

1.1 Words used in this guide

Word	Meaning
IDEA box	The small Raspberry Pi computer in the school that runs the apps. (On the demo it is named `wizardly-hugle`; your school's box has its own name.)
Console	The web page that lists the apps and opens them.
System Disk	The IDEA box's own disk. The apps live on it.
IDEA Disk	A USB disk or stick that the Console has prepared. It can become a **Files Disk** or a **Backup Disk**.
Spare disk	An IDEA Disk that is still empty.
Files Disk	An IDEA Disk for your own files. It appears as the folder **School Files** in Nextcloud (chapter 8).
Backup Disk	An IDEA Disk that keeps copies of the apps' data (chapter 9).
Operator	The person at the school who looks after the IDEA box, with the IDEA contact on the phone (Part B).

1.2 The apps

App	What you use it for	Chapters
Kolibri	Ready-made lessons, videos and exercises (for example Khan Academy). You make classes, lessons and quizzes and see each learner's progress.	3, 4
Nextcloud	Your own files: share worksheets with a class, write documents together in **Nextcloud Office**, collect homework.	5, 6, 8
Kiwix	Wikipedia and other reference books, offline.	7

1.3 How to use this guide

- **Part A (chapters 1 to 9)** is for teachers.
- **Part B (chapters 10 and 11)** is for the school operator.
- Each chapter has numbered steps with screenshots. The screenshots come from the IDEA demo box and use demo accounts whose names start with `demo` (see the appendix). Your school's names will be different.

> **No internet needed.** Everything in this guide works inside the school. Nothing you do is sent to the internet.

2. Getting connected and opening an app

You need a phone, tablet or laptop with a web browser, and the school's IDEA Wi-Fi.

1. Connect your device to the IDEA Wi-Fi. Ask your IDEA contact for the Wi-Fi name and password.
2. Open the browser and go to the Console address your IDEA contact gives you. The Console opens on the **Apps** page: one card per app, each with a short description and a blue **Open** button. The green dot at the top shows the Console is connected to the IDEA box.

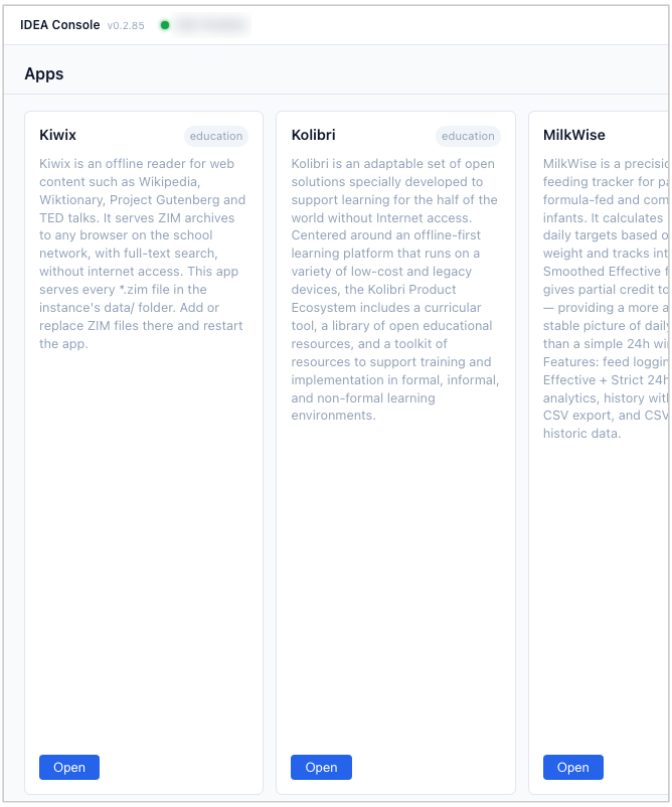

Figure 1. Console Apps page (two of the cards)

3. Click the blue **Open** button on the card of the app you need. The app opens in a new tab. Here it is Kolibri's sign-in page.

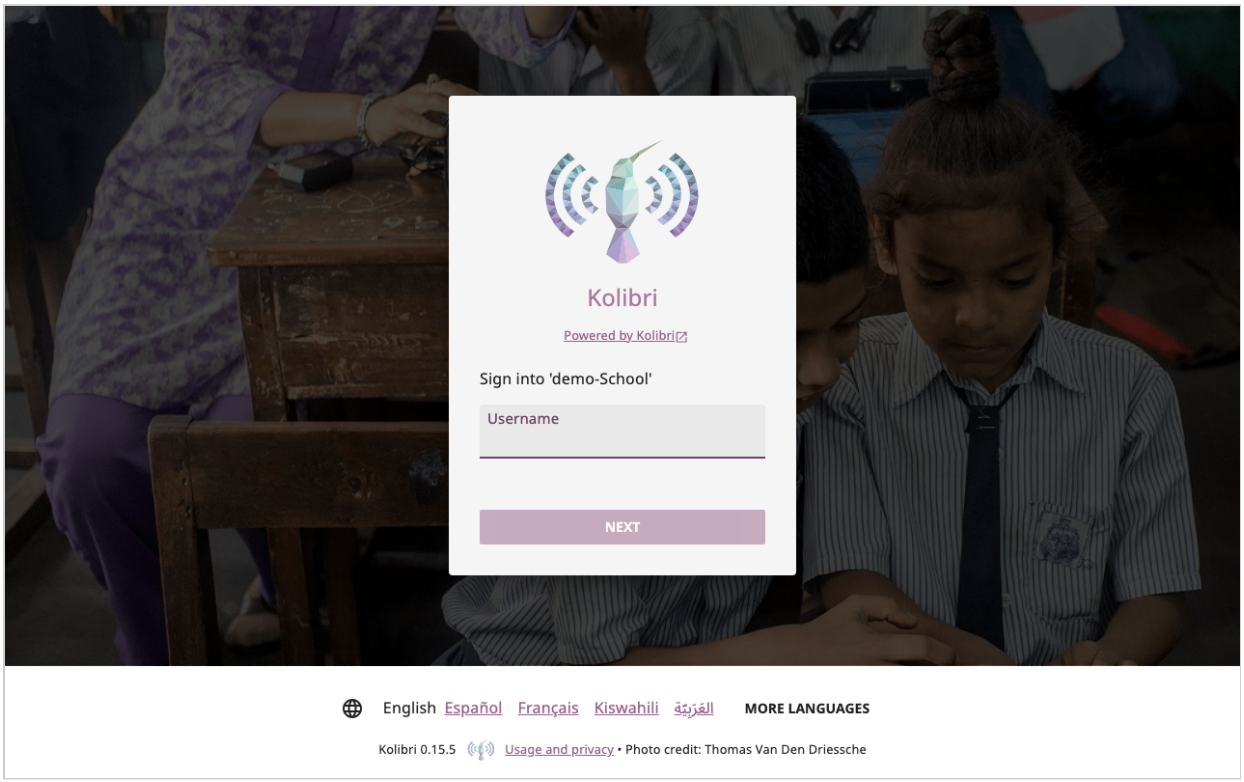

Figure 2. Kolibri opened from the Console

Good to know:

- A card that is greyed out and says **Not available** is not running. Do not try to fix it: tell your school operator.
- Do not type numbers (ports) into the address bar. Always use **Open** in the Console.
- The person icon at the top right (**Operator Login**) is for the operator (Part B). Teachers do not need it.

> **Tip.** You can bookmark the page that opens. If the bookmark stops working, go back to the Console and use **Open** again.

3. Kolibri for teachers

Demo: school (facility) `demo-School`, teacher `demo_teacher1`, class `demo-Grade5A`, channel **Khan Academy (English - US curriculum) > Math by grade > 5th grade > Add and subtract fractions**.

3.1 Signing in

Open Kolibri from the Console (chapter 2, Figure 2). Type your username and click **NEXT**, then type your password.

3.2 Create a class

Creating classes needs a Kolibri admin account (in the demo, `demo_teacher1` is admin and coach).

1. Open **Facility** > **CLASSES**. You see the list of classes.

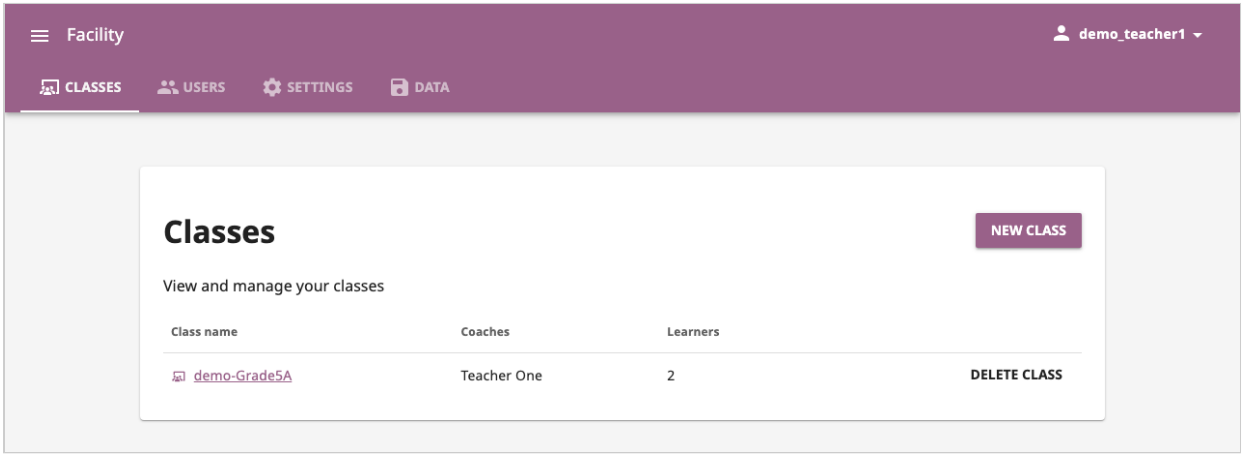

Figure 3. Classes list

2. Click **NEW CLASS**, type the class name, click **SAVE**. (In the demo we pressed CANCEL because `demo-Grade5A` already exists.)

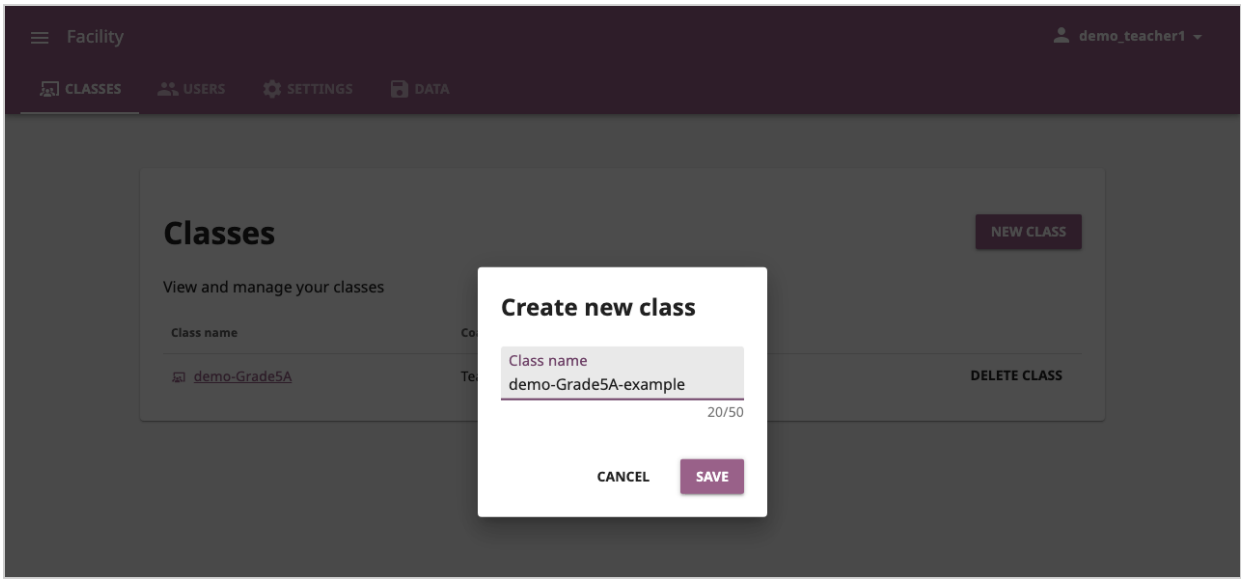

Figure 4. Create new class

3.3 Enroll learners

1. Click the class name. The class page lists **Coaches** and **Learners**. Click **ENROLL LEARNERS**.

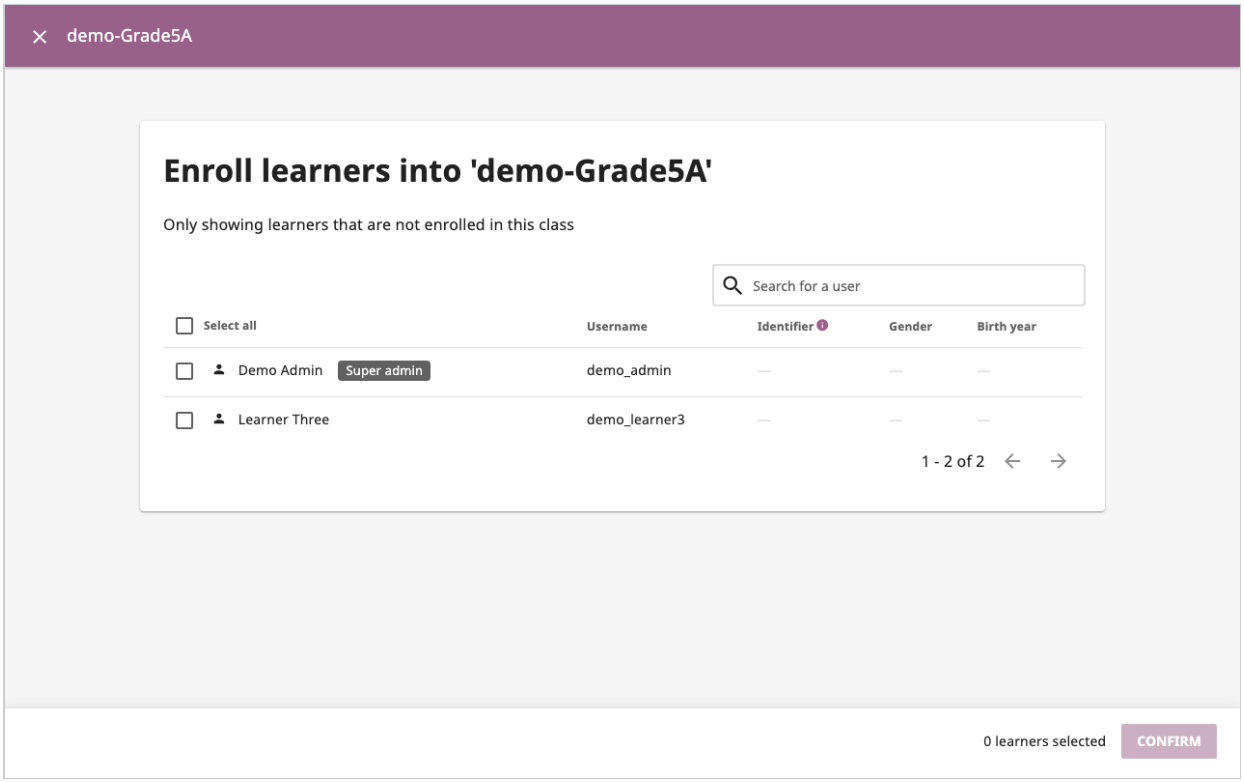

Figure 5. Enroll learners page

2. The list only shows learners who are not yet in the class. Tick each learner (here: Learner Three), then click **CONFIRM**.

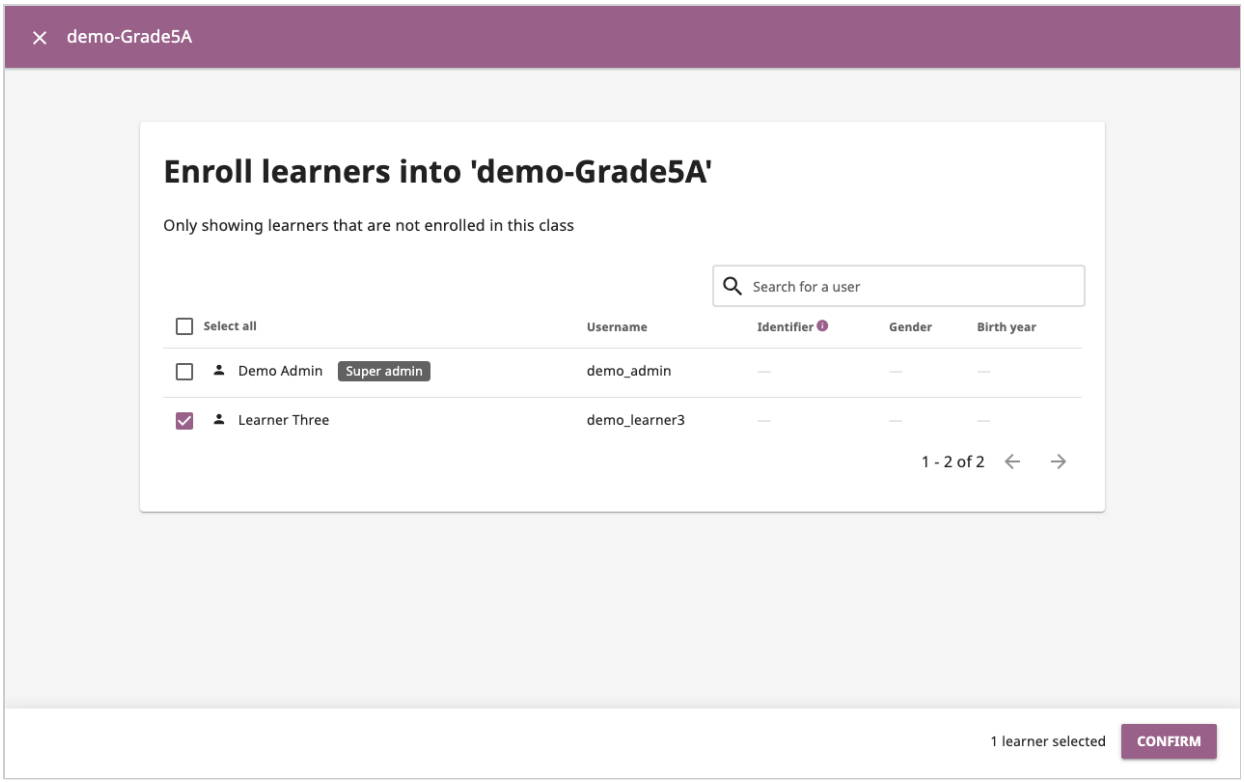

Figure 6. Learner ticked

3. The learner now appears under Learners.

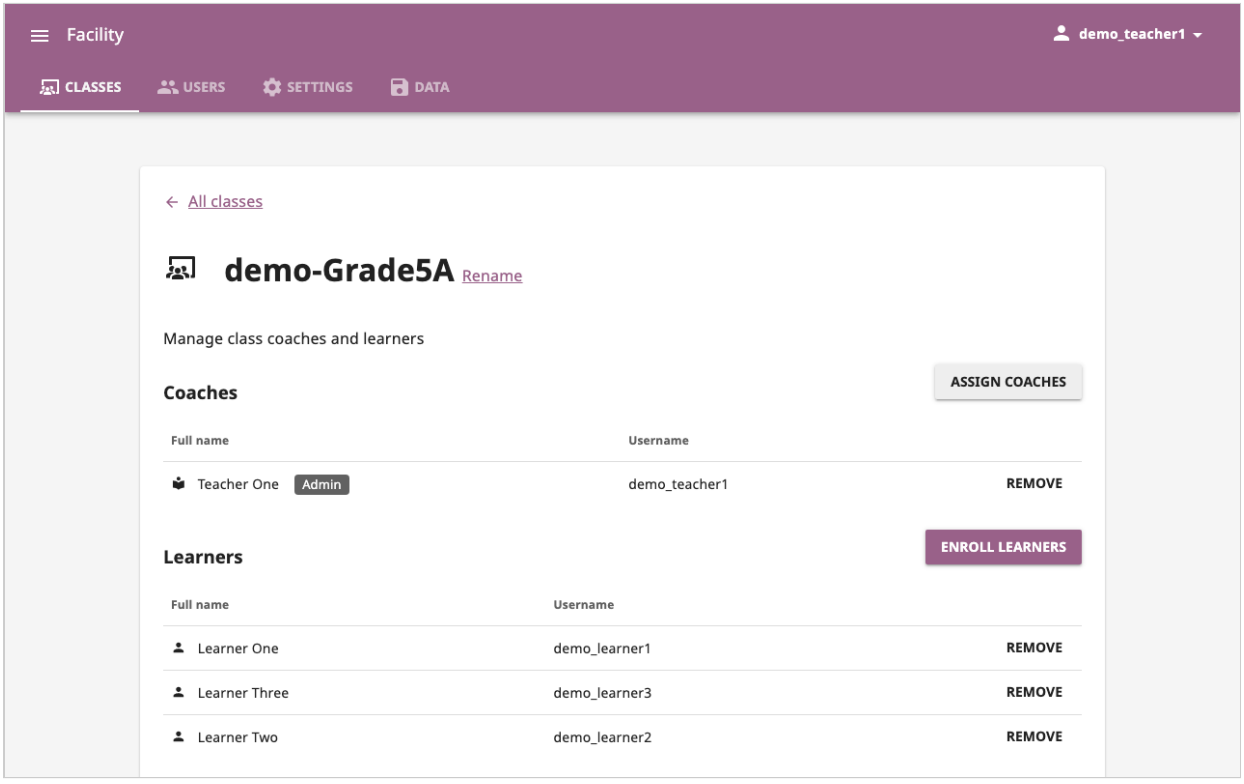

Figure 7. Learner enrolled

3.4 Make a lesson and show it to the class

A good lesson has 3 videos (explain) and 3 exercises (practise).

1. Open **Coach**, choose the class, click **PLAN** > **LESSONS** > **NEW LESSON**.

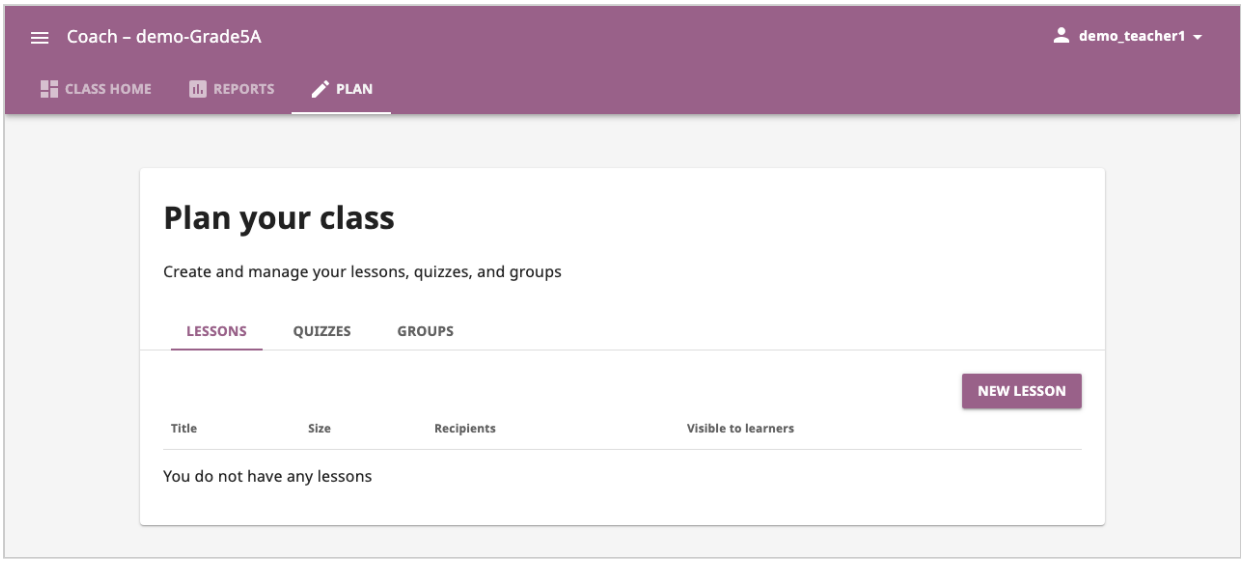

Figure 8. Plan your class

2. Type a title (`demo-Fractions lesson`). Under **Recipients** keep **Entire class**. Click **SAVE CHANGES**.

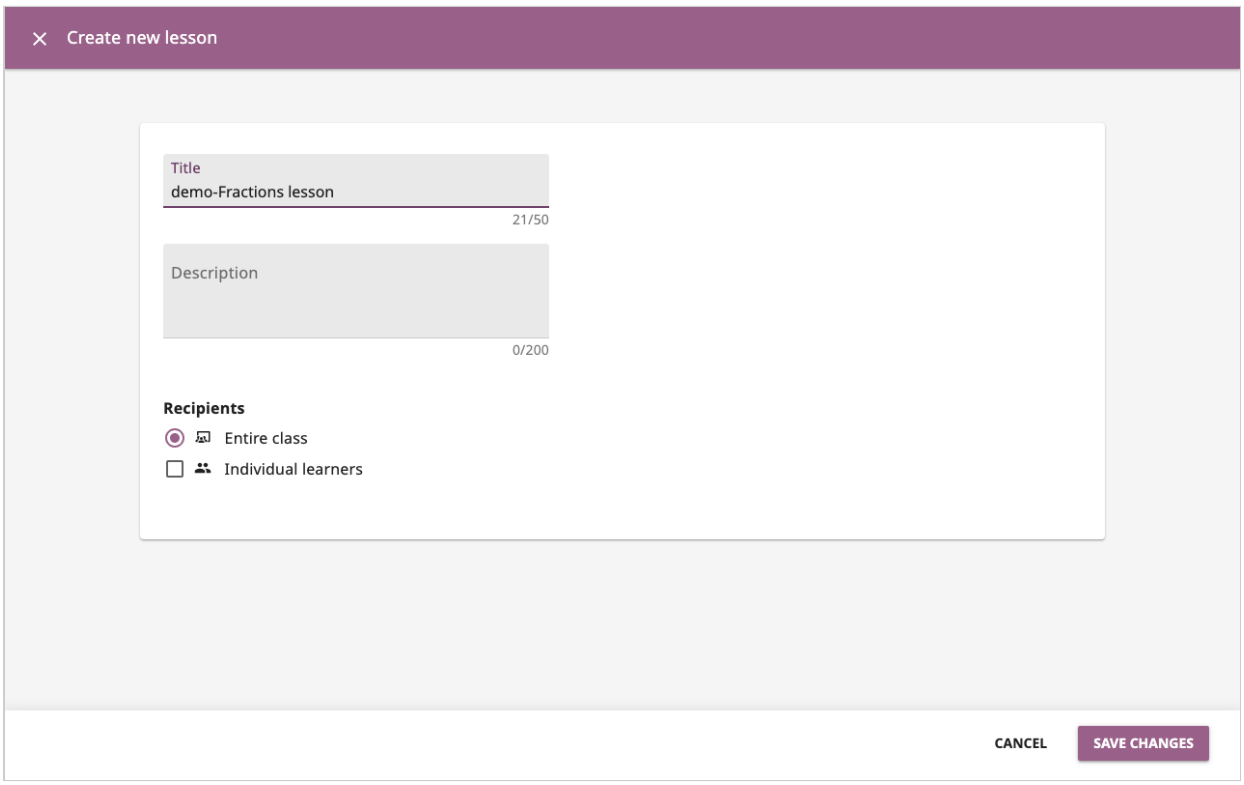

Figure 9. New lesson

3. On the lesson page, click **MANAGE RESOURCES**.

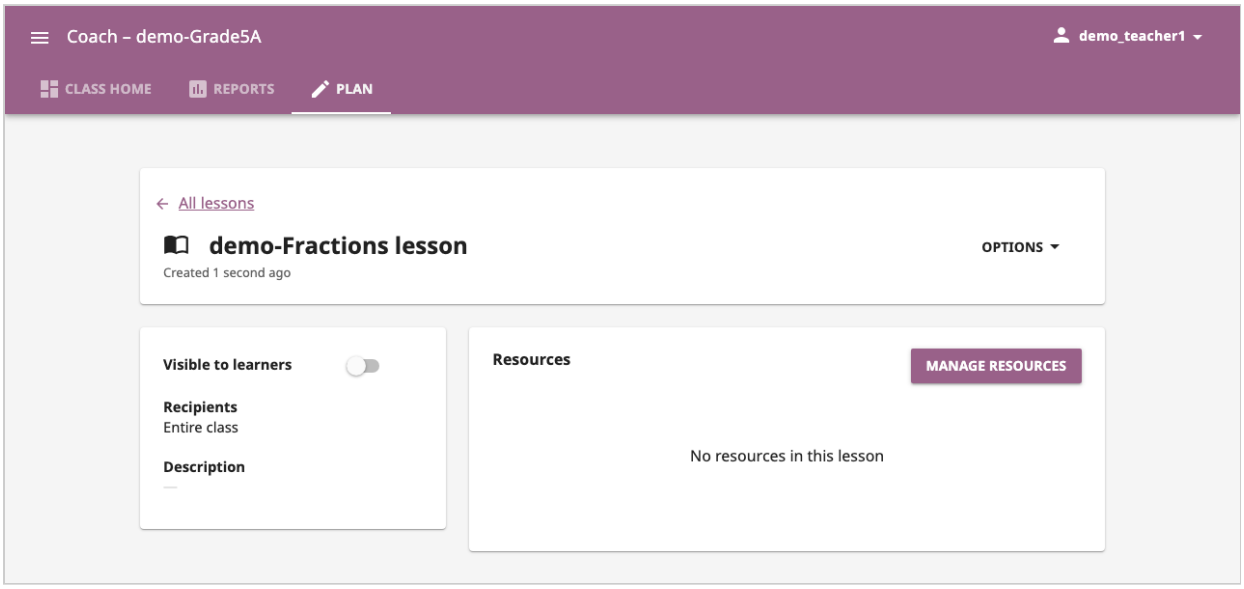

Figure 10. Empty lesson

4. Choose the channel, then click through **Math by grade > 5th grade > Add and subtract fractions**.

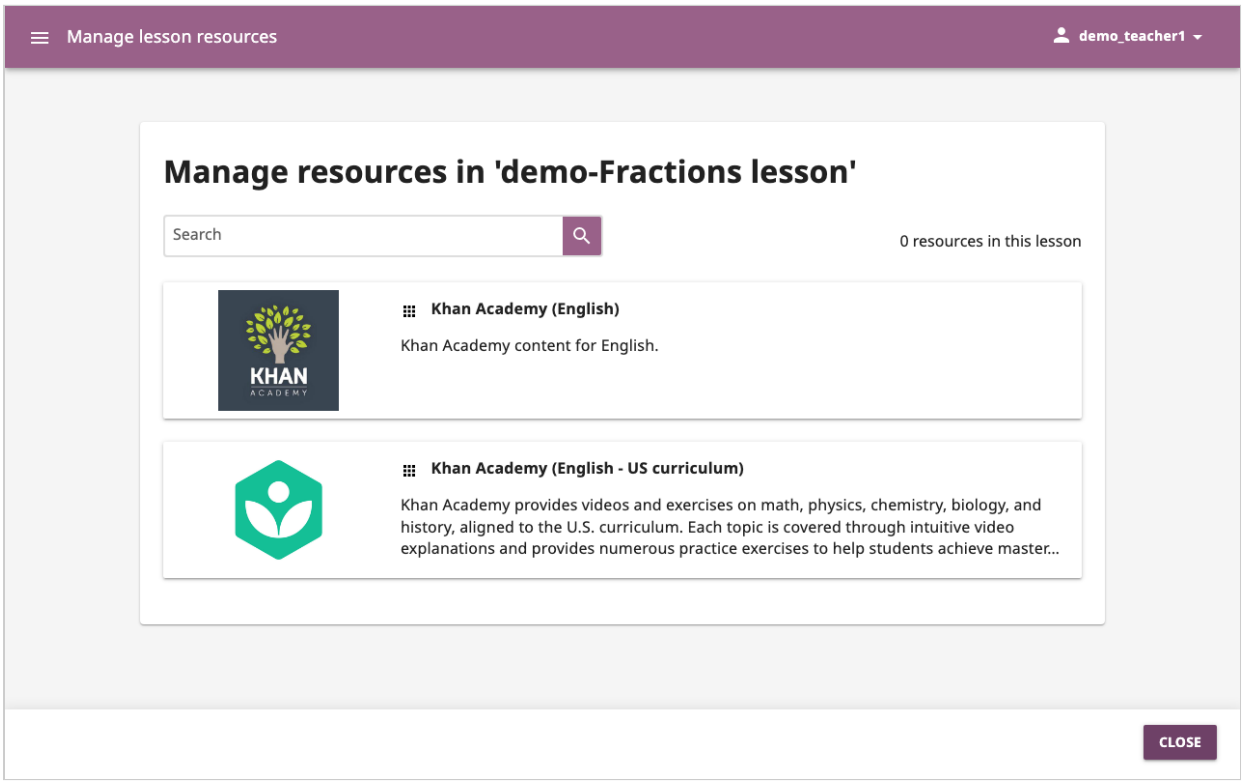

Figure 11. Channels

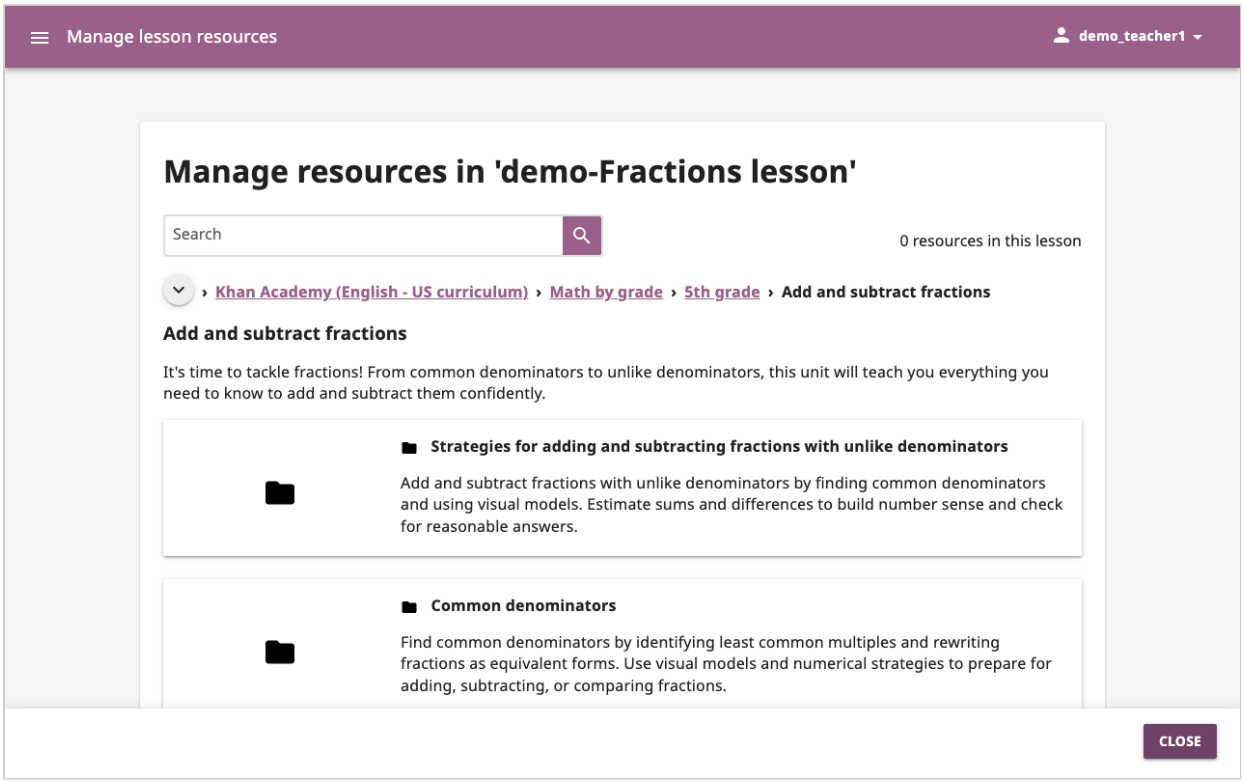

Figure 12. Topic

5. Open "Adding and subtracting fractions with unlike denominators". Tick 3 videos and 3 exercises (the exercise titles start with "Practice"). Each tick is saved straight away; a message "resources added" appears. Click **CLOSE** when done.

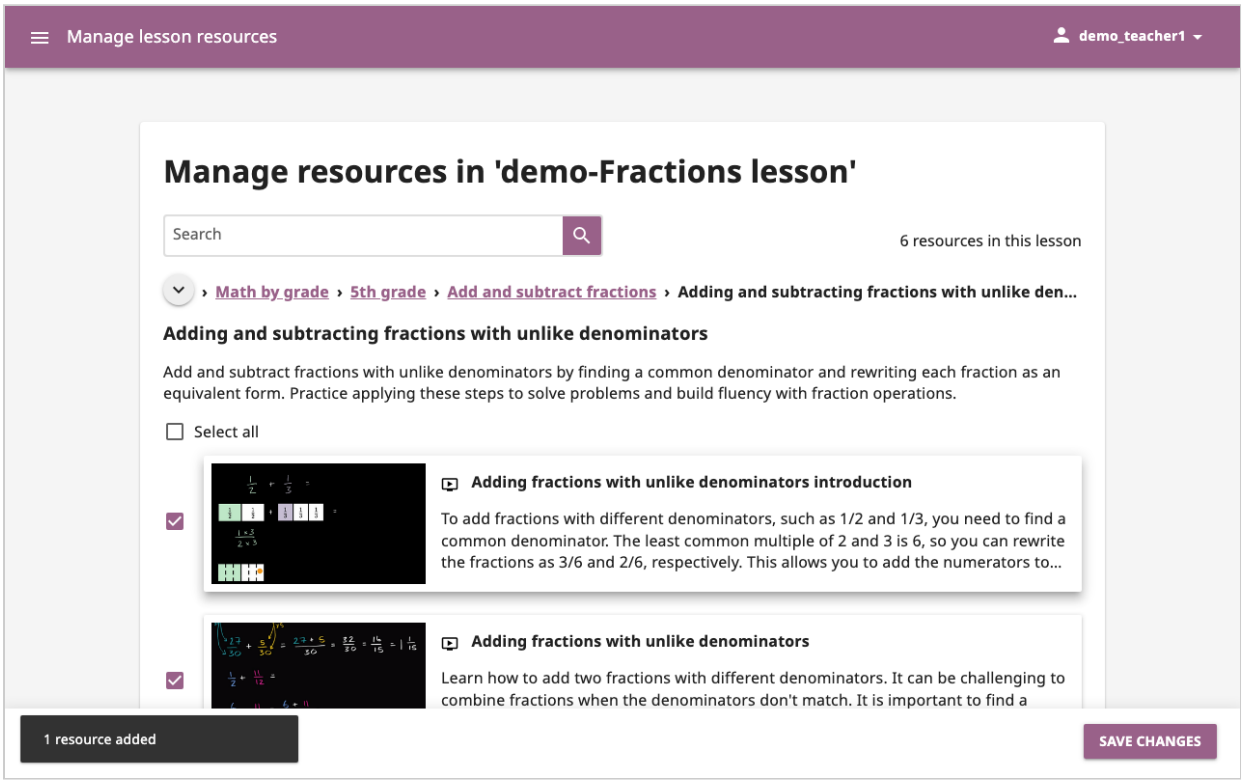

Figure 13. Resources ticked

6. Back on the lesson page, check the 6 resources and switch on **Visible to learners**.

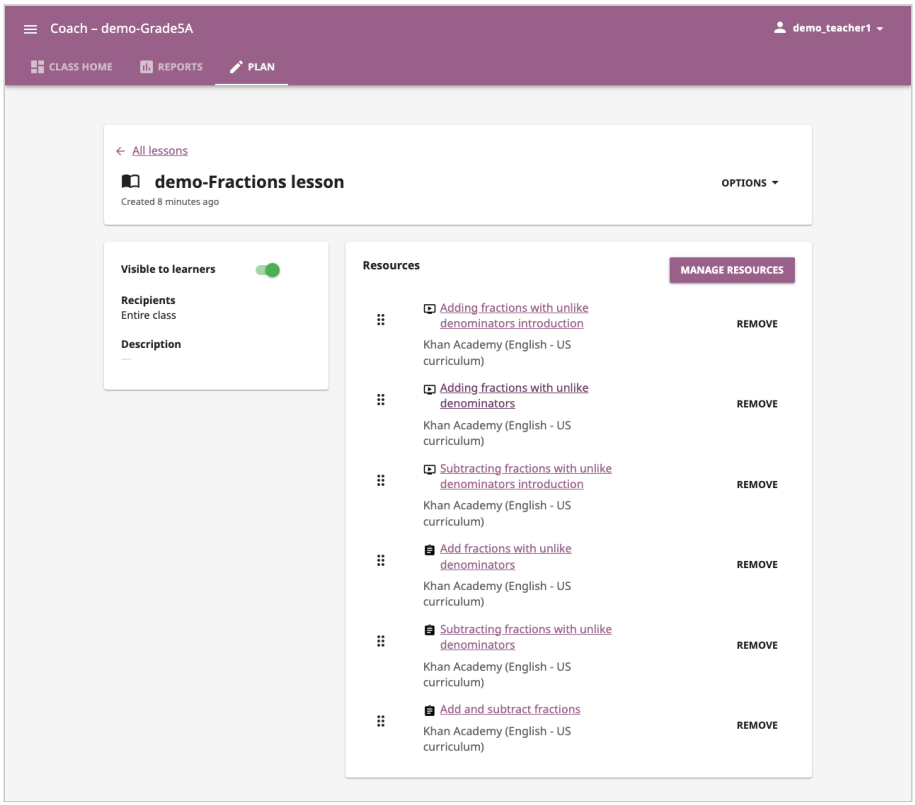

Figure 14. Lesson with 6 resources, visible

3.5 Make a quiz

Quizzes are built from exercises only.

1. **PLAN** > **QUIZZES** > **NEW QUIZ**.

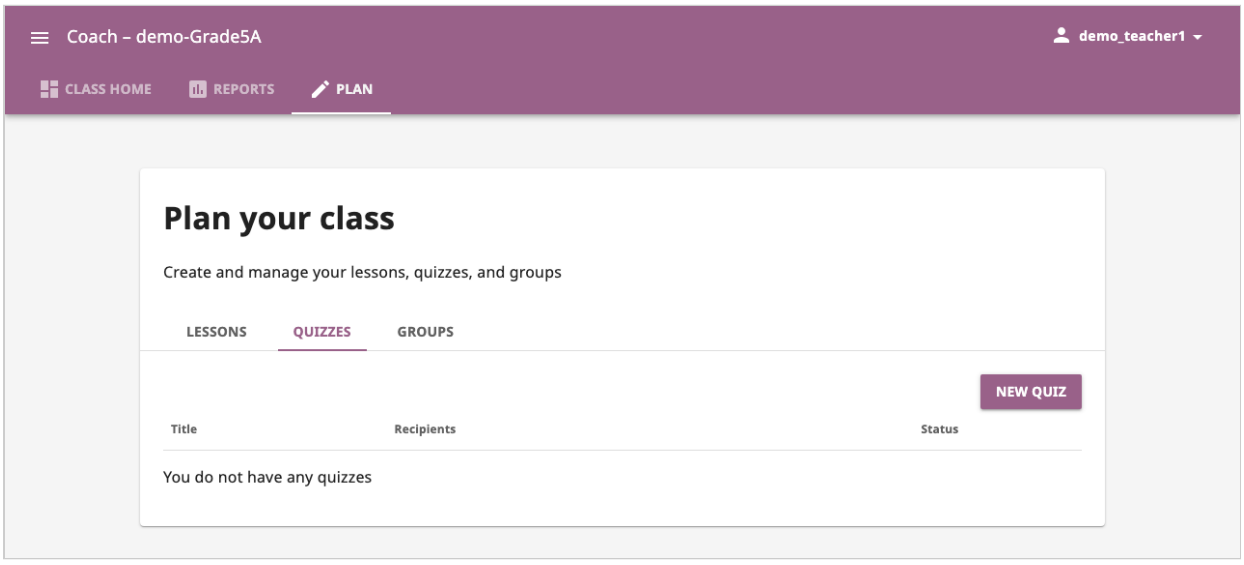

Figure 15. Quizzes tab

2. Type a title (`demo-Fractions quiz`) and the **Number of questions** (6). Browse to Add and subtract fractions and tick a folder (or single exercises). Click **CONTINUE**.

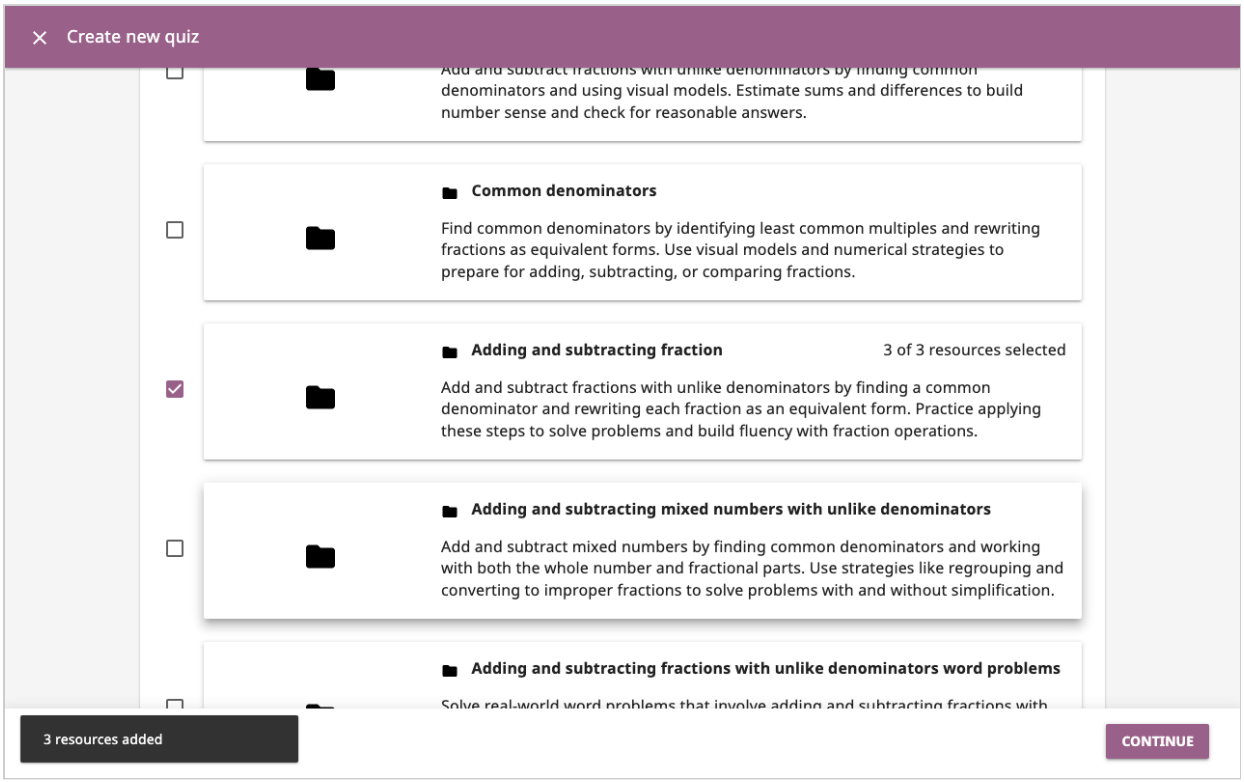

Figure 16. Create new quiz

3. **Preview quiz**: check the questions, choose **Randomized** or **Fixed** order, click **FINISH**.

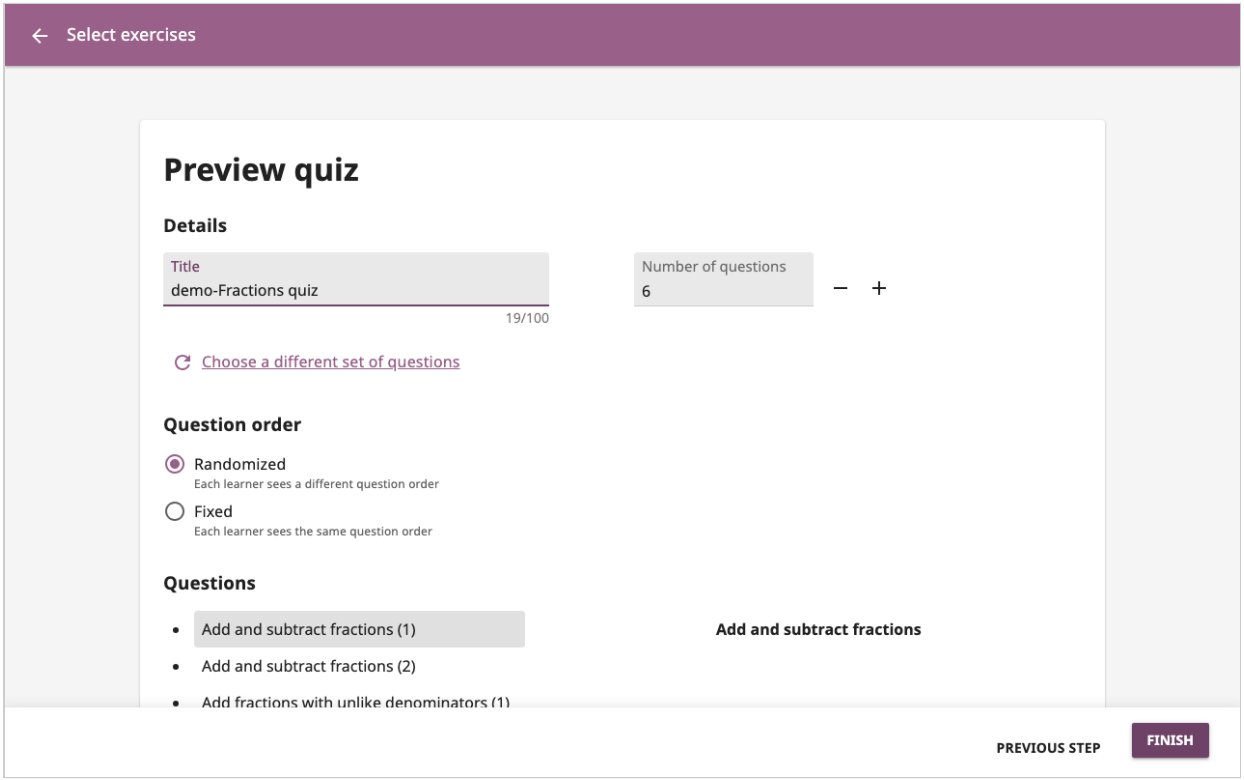

Figure 17. Preview quiz

4. The quiz is not open yet. When the class is ready, click **START QUIZ** and then **CONTINUE**. When the class has finished, open the quiz in **Coach** again and end it there, so no more answers come in.

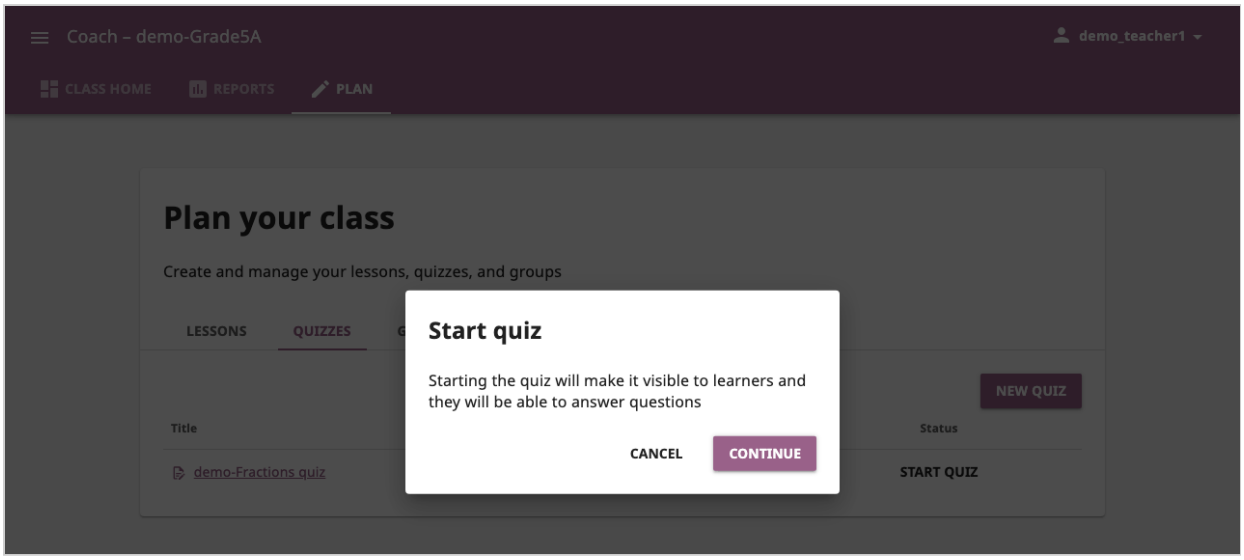

Figure 18. Start quiz

3.6 See progress (Reports)

Do this after learners have worked (chapter 4).

1. Click **REPORTS**. Tabs: LESSONS, QUIZZES, GROUPS, LEARNERS.

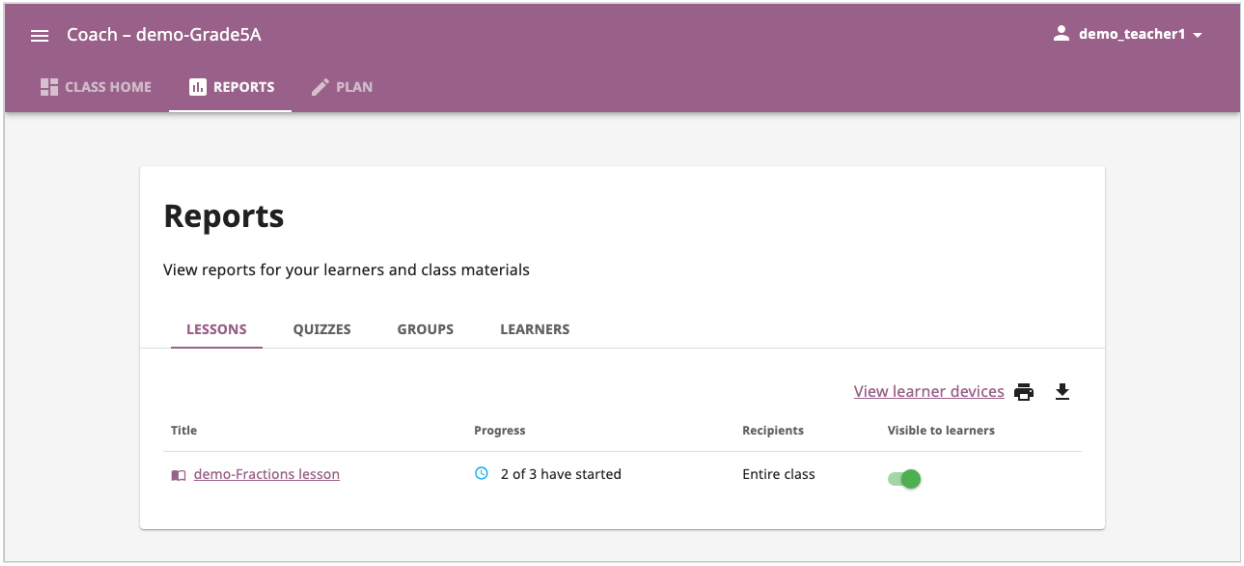

Figure 19. Reports

2. **LESSONS** > the lesson > **LEARNERS**: who completed, started or did not start.

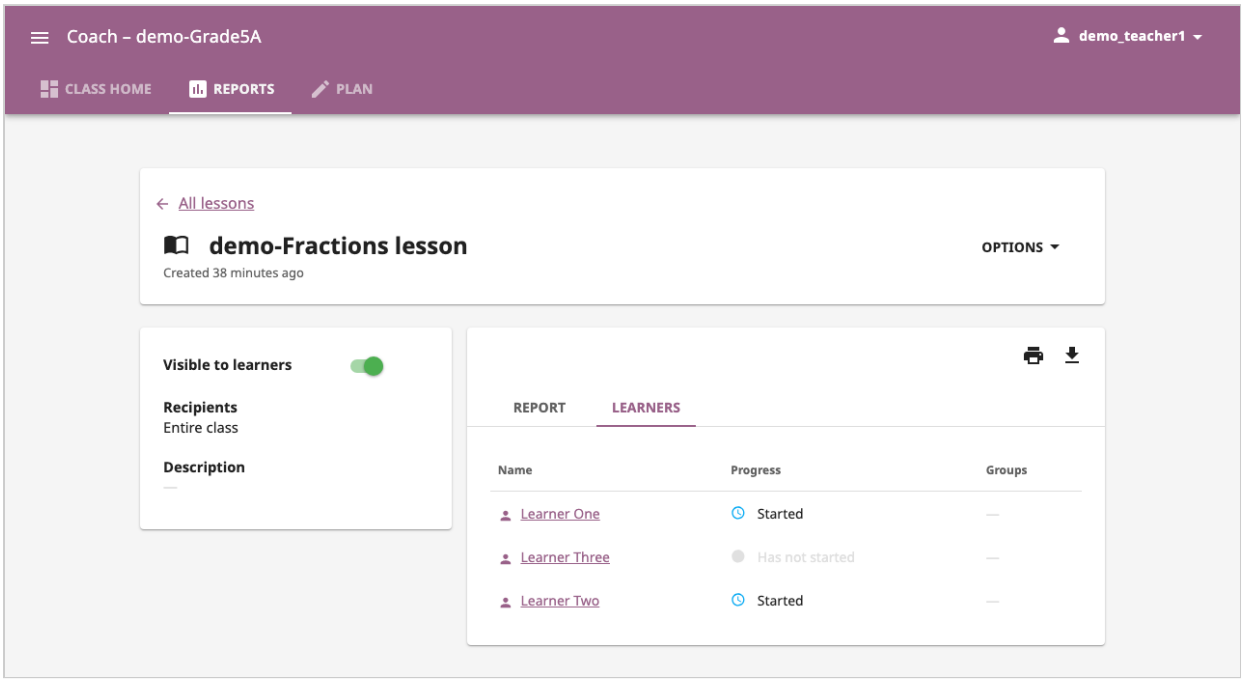

Figure 20. Lesson report

3. **QUIZZES** > the quiz: status and score per learner; **DIFFICULT QUESTIONS** shows what to re-teach.

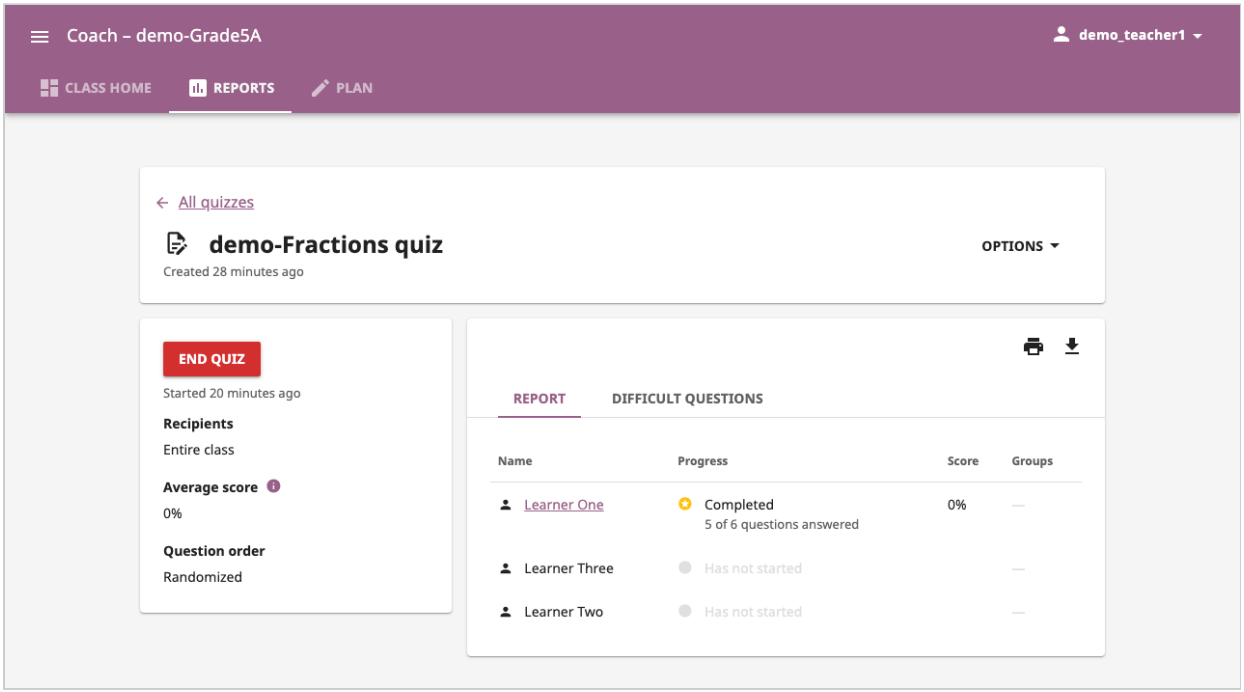

Figure 21. Quiz report

4. **LEARNERS** > a name: that learner's lessons and quizzes.

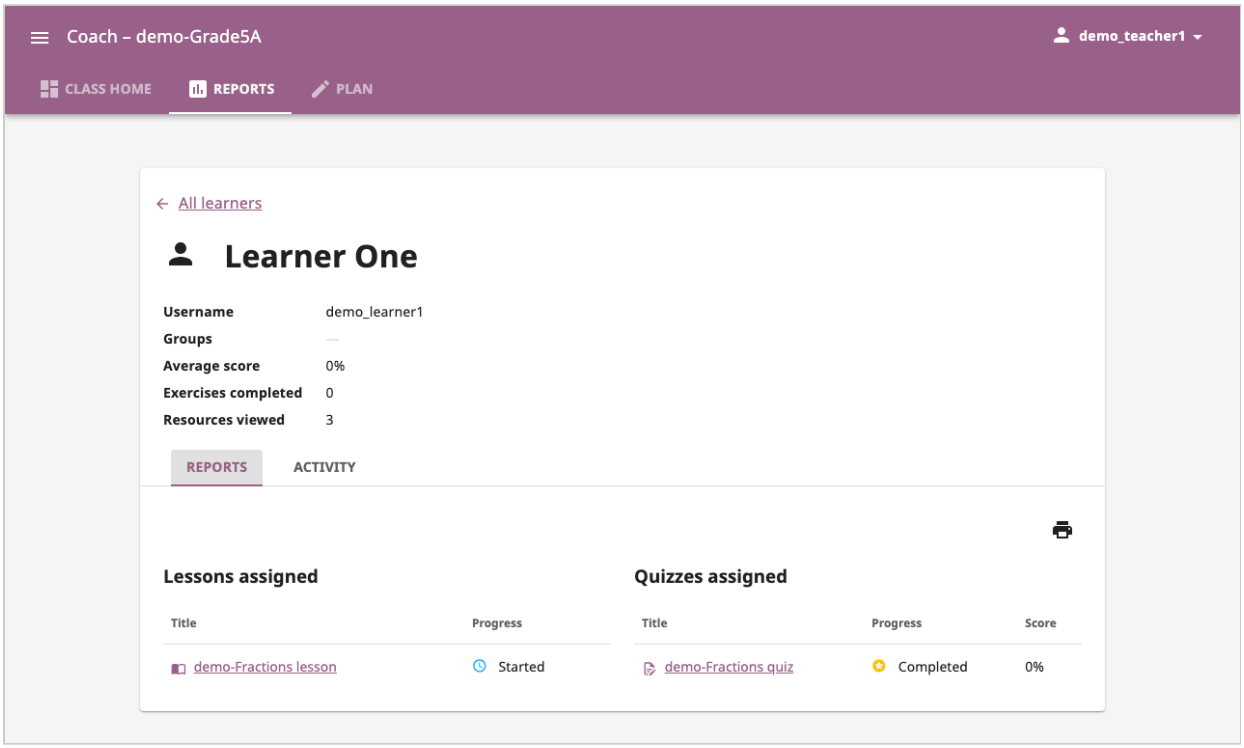

Figure 22. Learner report

Reports can be printed or exported as CSV (icons top right).

> **Tip.** Do not chase 100%. Look for the question most learners got wrong and teach it again.

4. Kolibri for learners (try it yourself)

Sign in as a learner in a second browser window (private window) to see exactly what your class sees. On the demo school, learners sign in with their **username only, no password** (facility setting; check your school's setting).

> **Note on passwords.** The demo learners sign in without a password. A school can turn learner passwords on: sign in as a Kolibri admin, open **Facility** > **SETTINGS**, tick **Require password for learners**, then click **SAVE CHANGES**. Learners who have no password yet then need one set by the admin.

4.1 Do a lesson

1. Sign in as `demo_learner1`. **HOME** shows Your classes, Recent lessons and Recent quizzes.

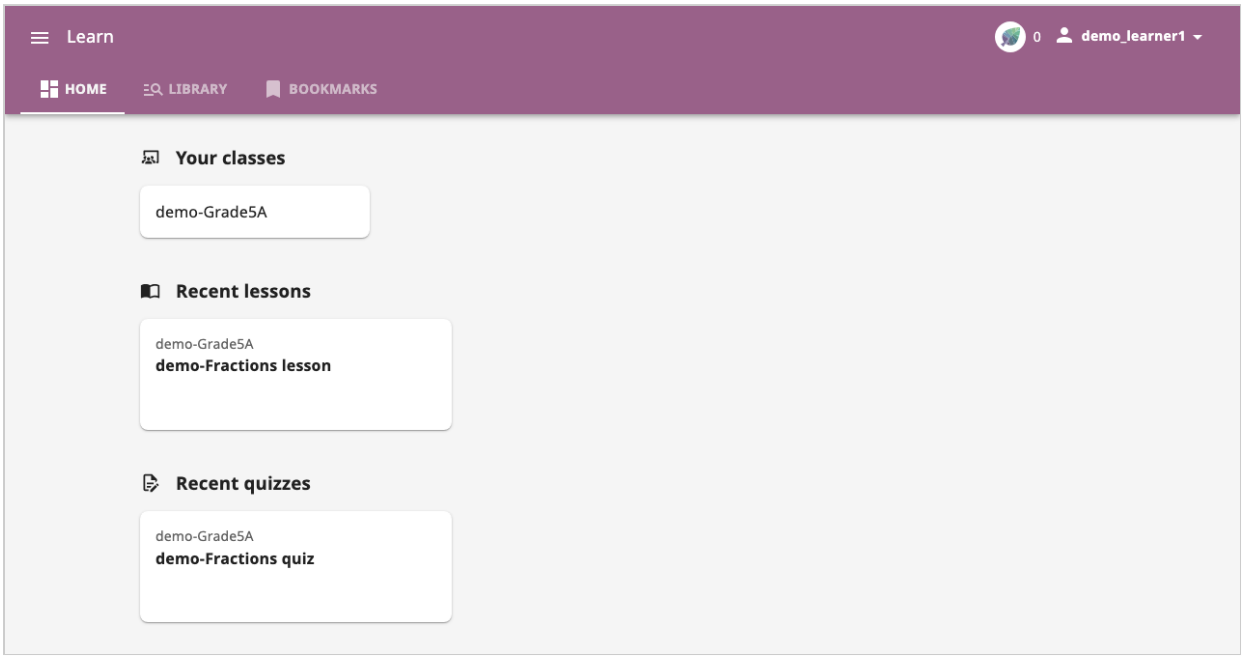

Figure 23. Learner home

2. Click **demo-Fractions lesson**. The 6 items are listed in order.

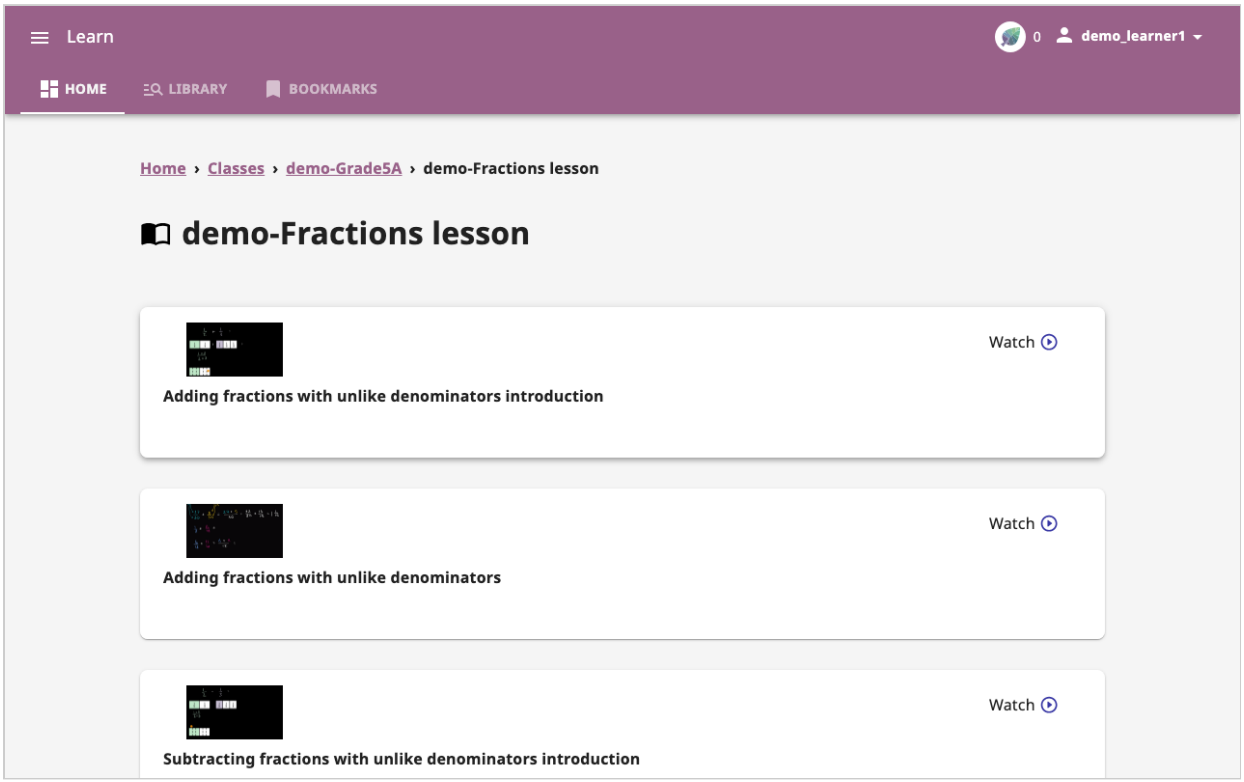

Figure 24. Lesson

3. Watch the first video.

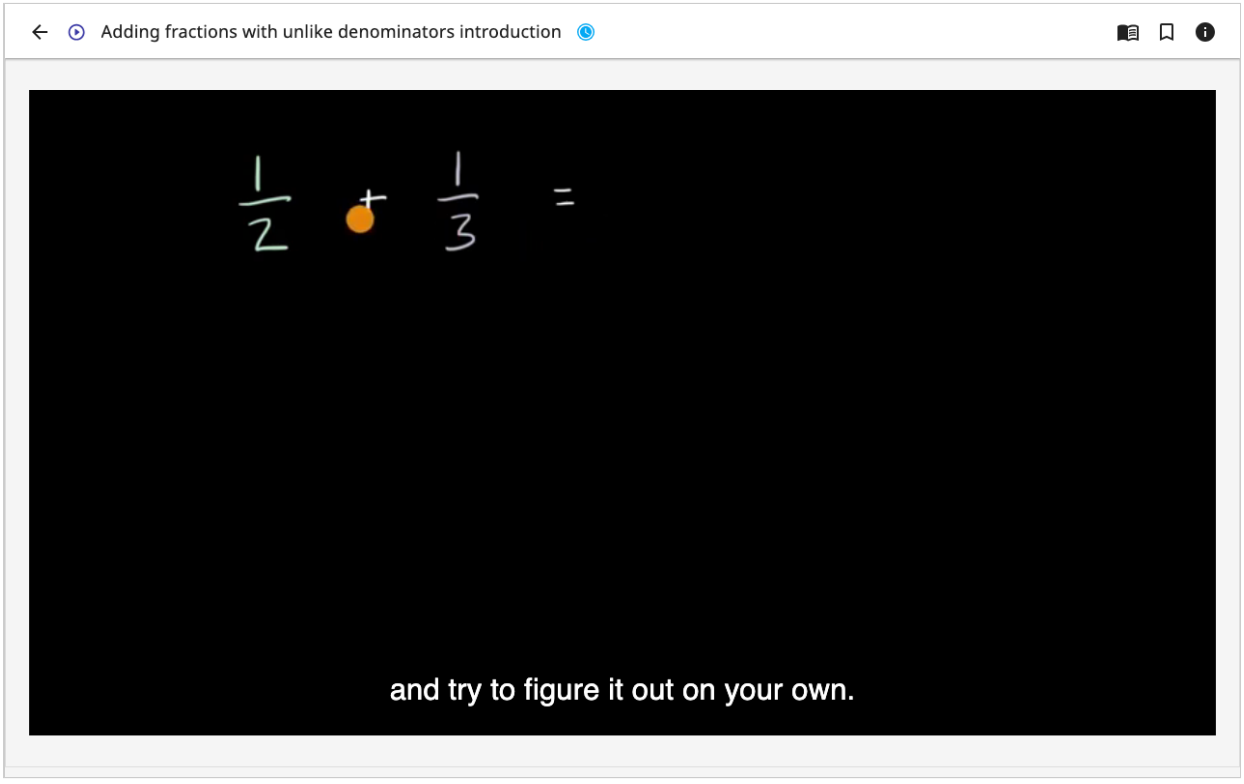

Figure 25. Video

4. Open an exercise, type an answer, click **CHECK**. Keep going until the exercise is complete ("5 correct" goal shown at the top).

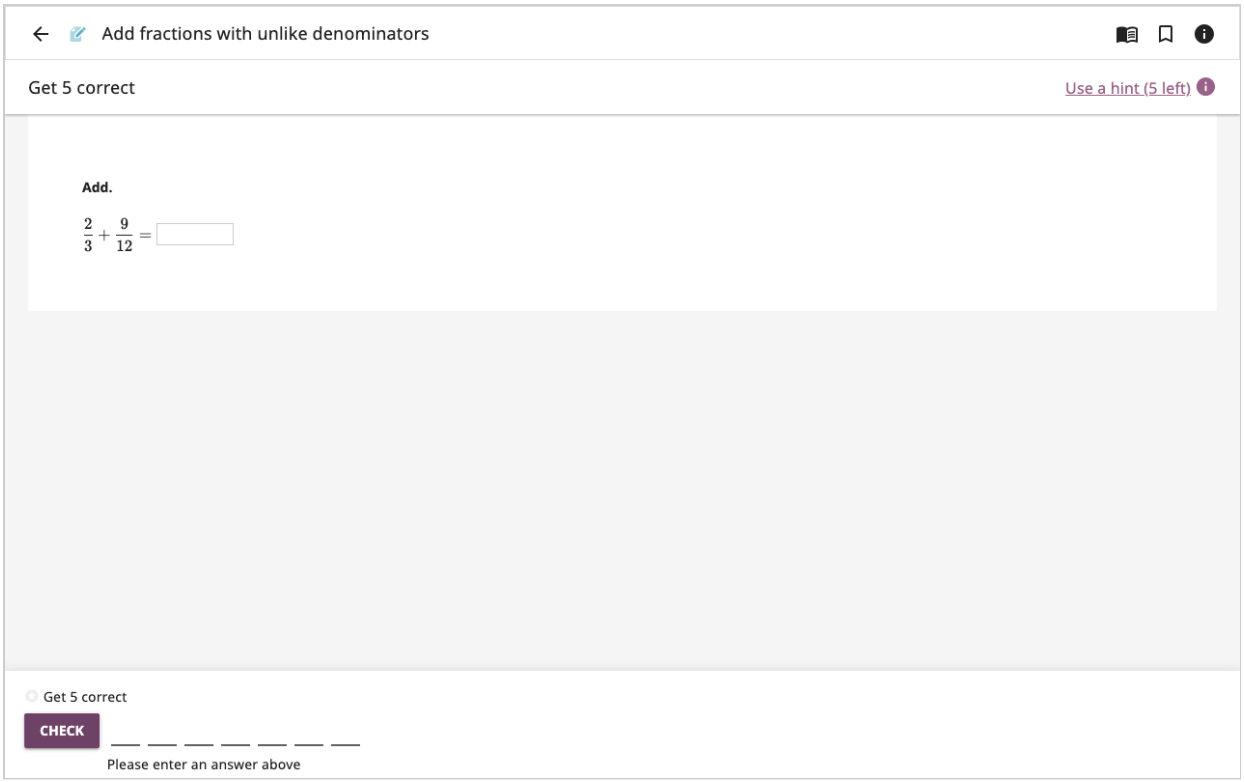

Figure 26. Exercise

5. Sign out. Sign in as `demo_learner2` and open only one video, so the report shows a difference.

4.2 Take a quiz

1. Open the quiz from **Recent quizzes** (or the class page).

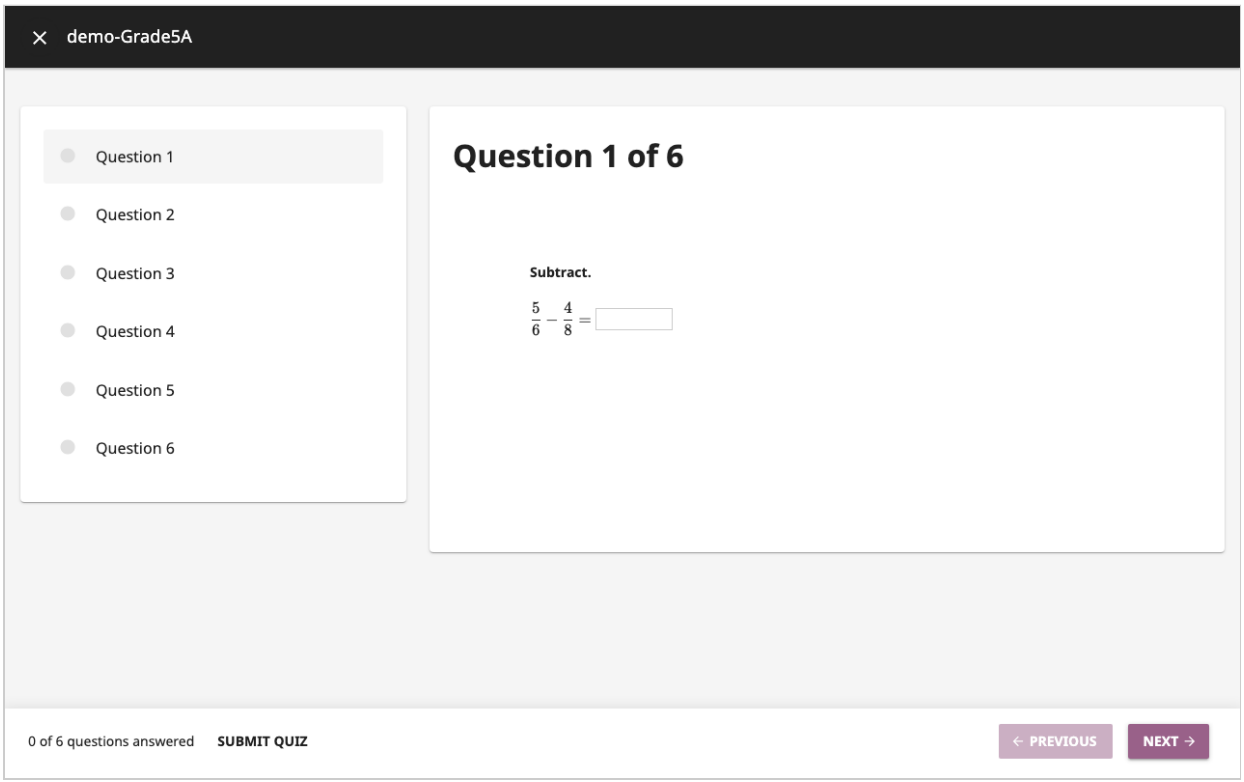

Figure 27. Quiz

2. Answer each question and use **NEXT** / **PREVIOUS**. The list on the left shows answered questions.

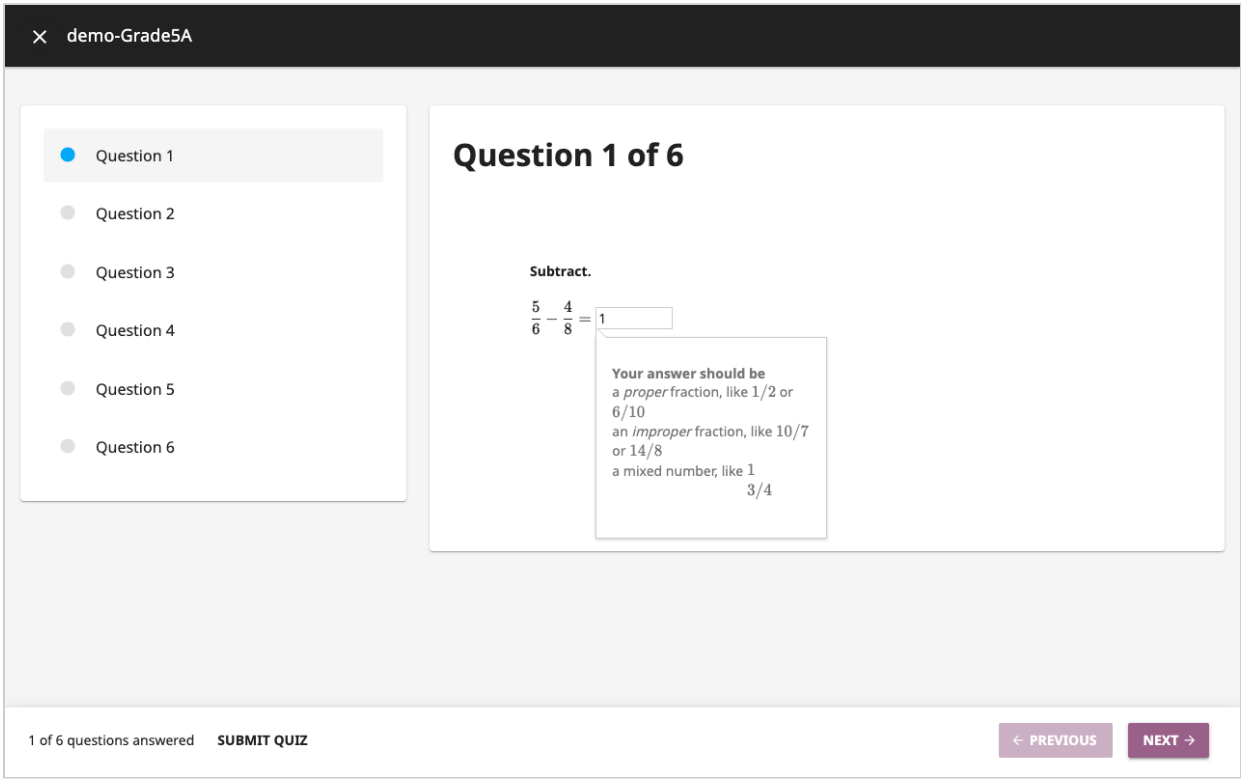

Figure 28. Question

3. Click **SUBMIT QUIZ** and confirm. After submitting, answers cannot be changed.

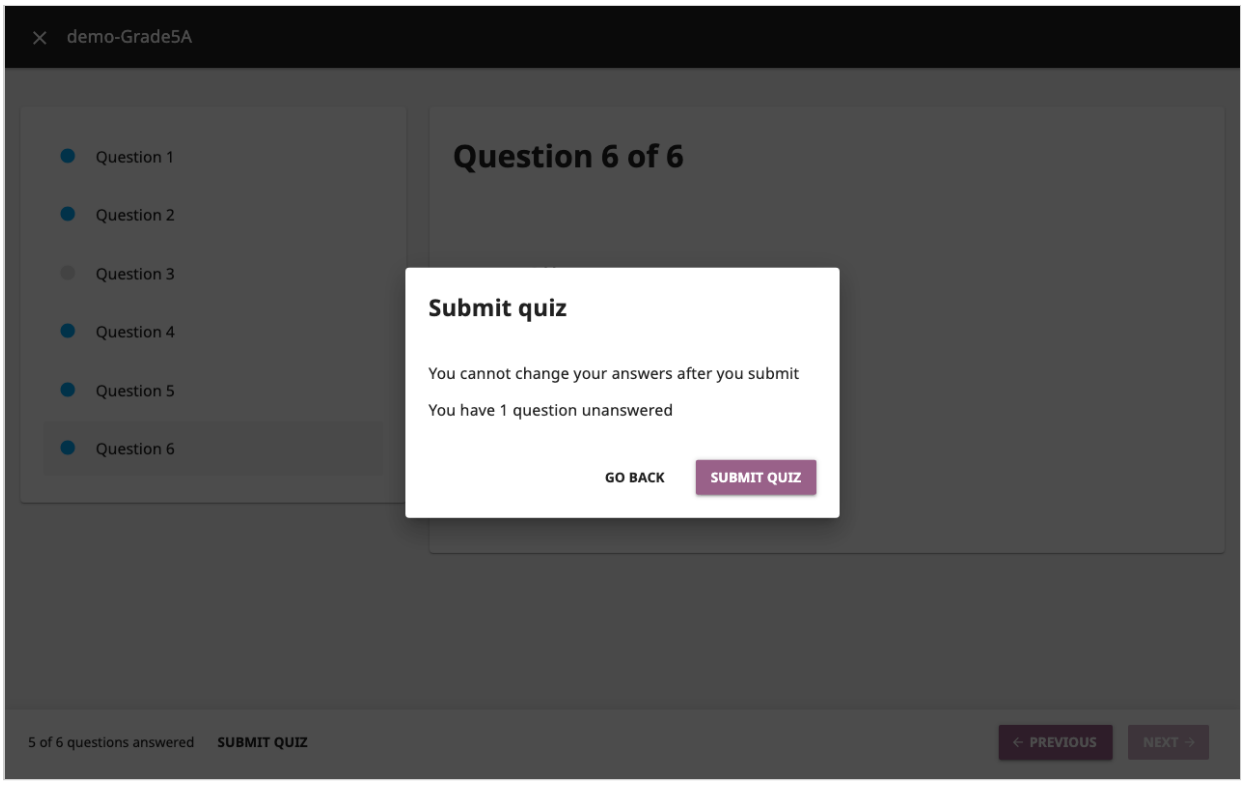

Figure 29. Submit

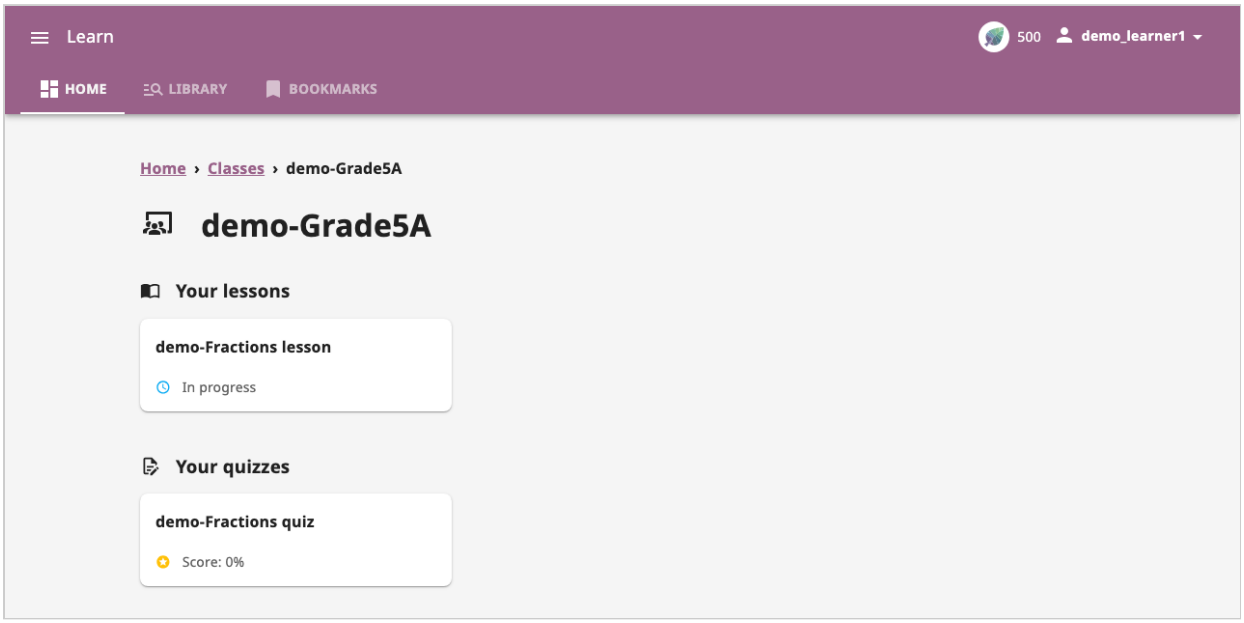

Figure 30. After submit

Now go back to the teacher window and look at Reports (3.6).

5. Nextcloud for teachers

Demo: `demo-teacher1`, groups `demo-Grade5A` (class) and `demo-teachers`. Office documents open in **Nextcloud Office**.

Open Nextcloud from the Console (chapter 2) and sign in. Click **Files** at the top.

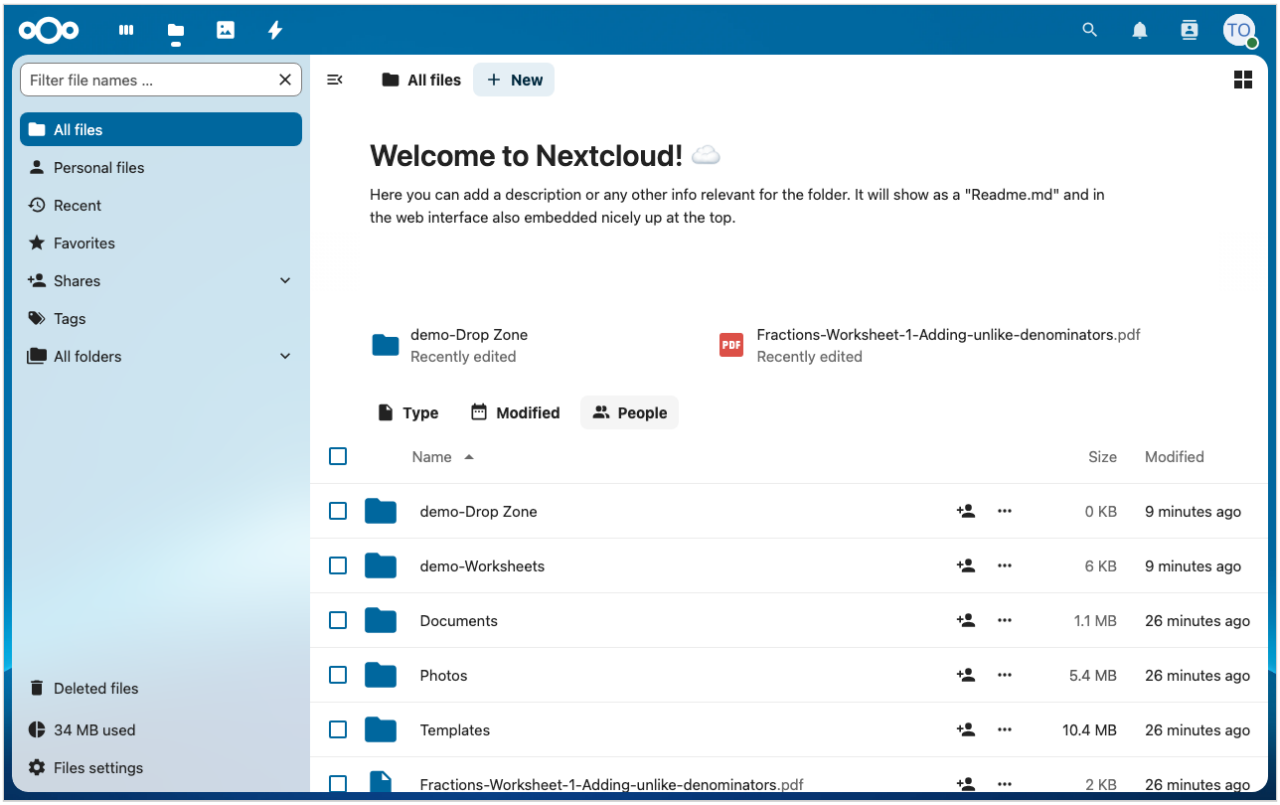

Figure 31. Files

5.1 Share worksheets with the class (view only)

1. Next to the folder `demo-Worksheets`, click the share icon (**Show sharing options**). The right panel opens on **Sharing**.

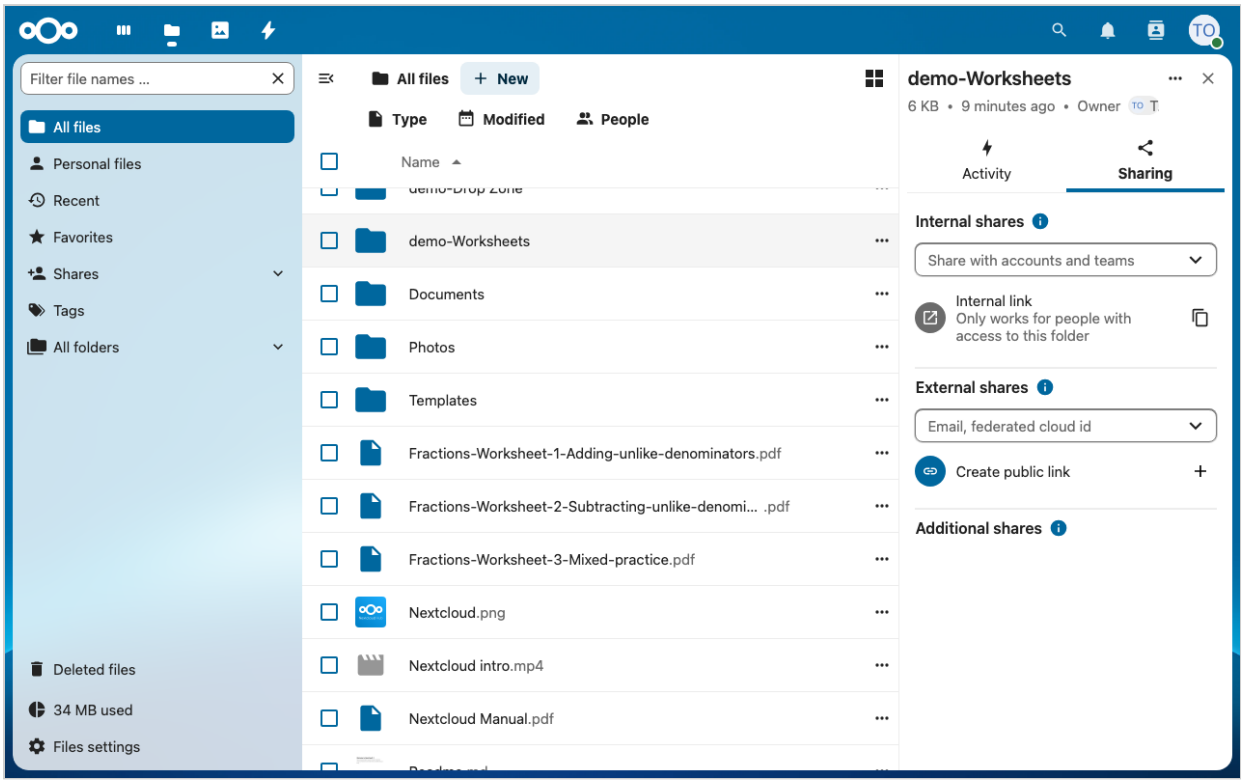

Figure 32. Sharing panel

2. In **Internal shares** ("Share with accounts and teams"), type `demo-Grade5A` and pick the group.
3. Set the permission to **View only**. The group then appears under Internal shares.

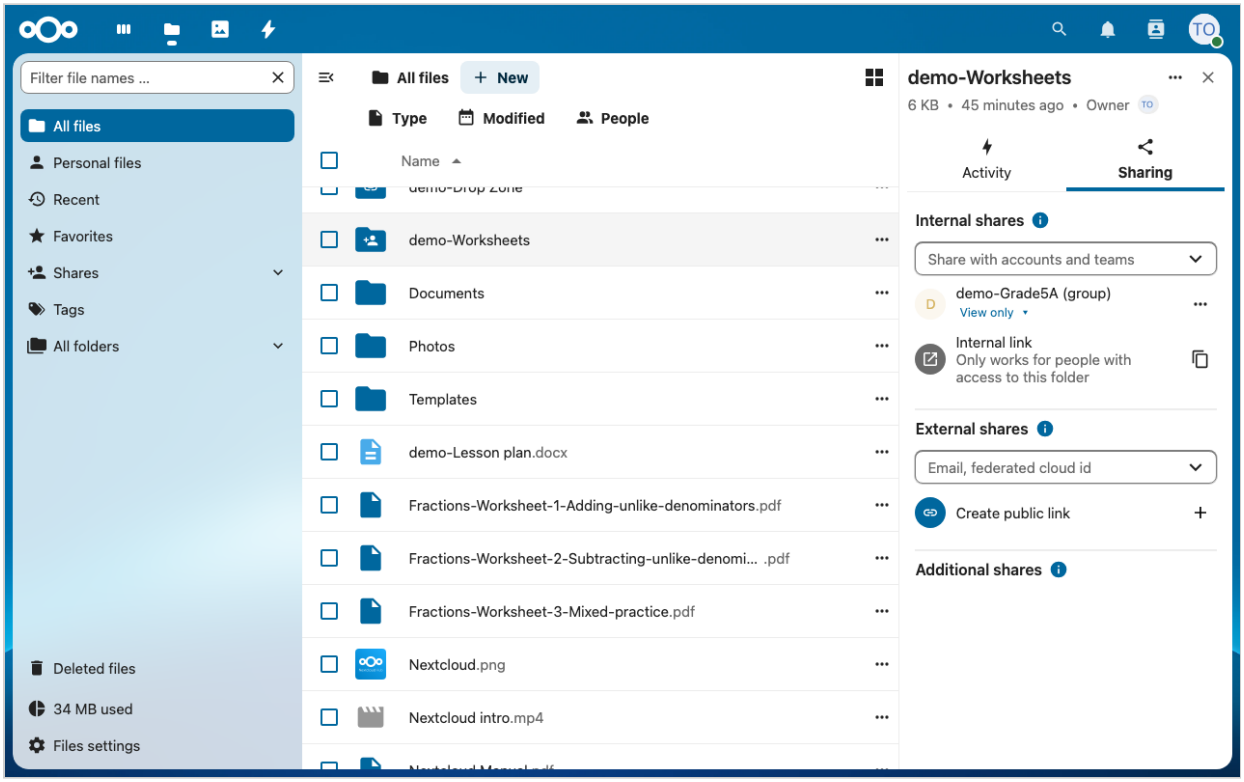

Figure 33. Shared with group

Learners now see the folder but cannot change or delete files.

5.2 Write a document together

1. Click **+ New** > **New document**.

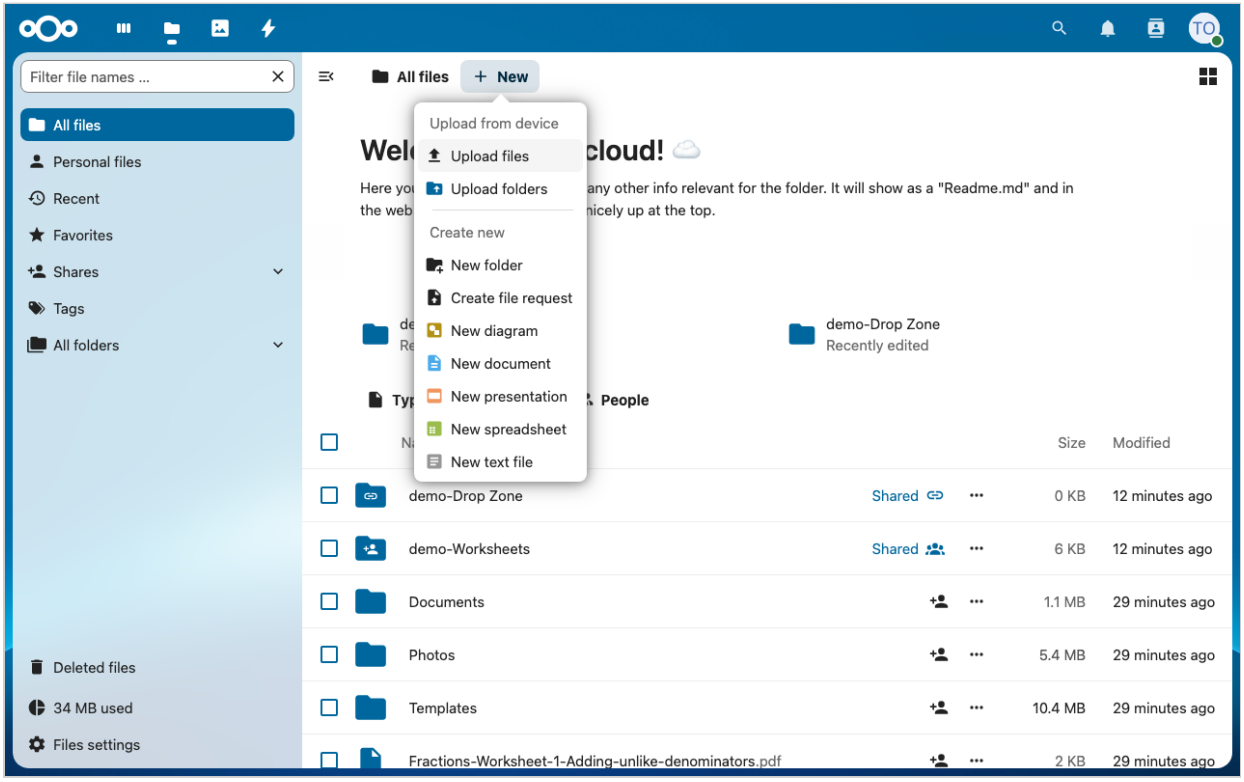

Figure 34. New menu

2. Type a name (`demo-Lesson plan`) and click **Create**.

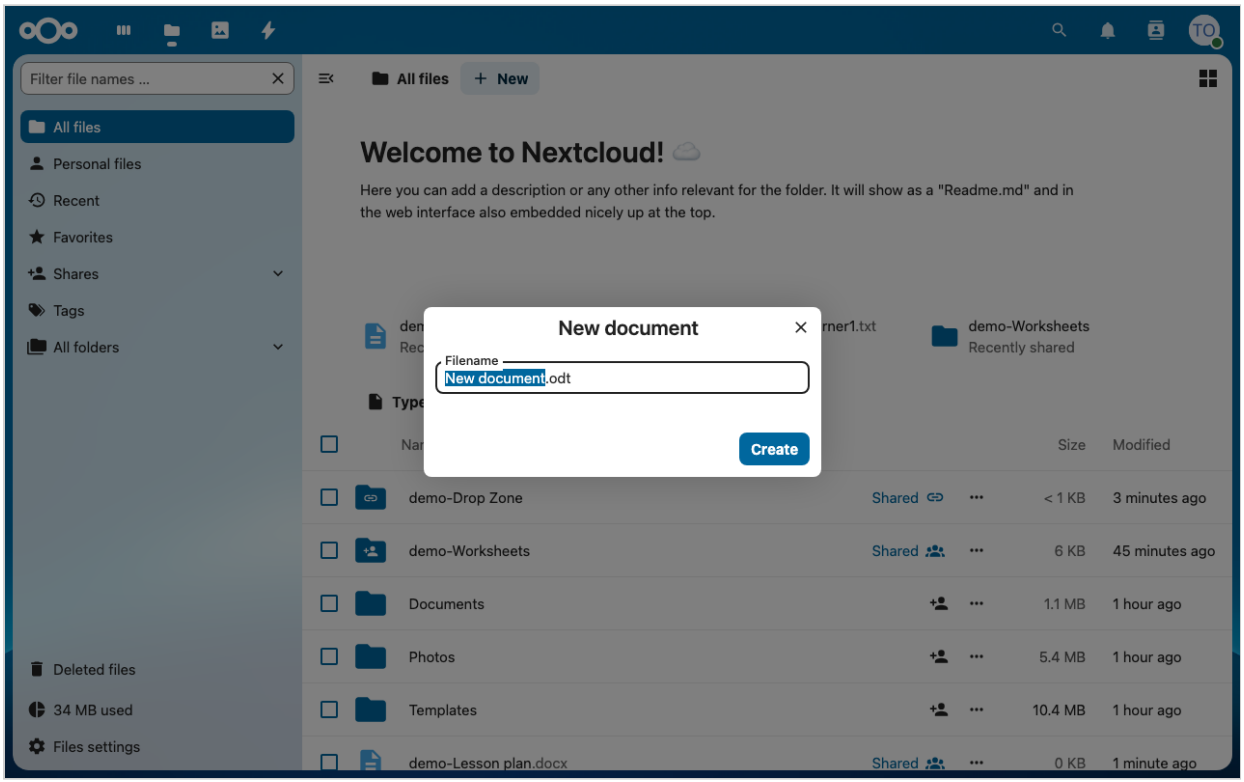

Figure 35. Name

3. Pick a template (Blank is fine) and click **Create**.

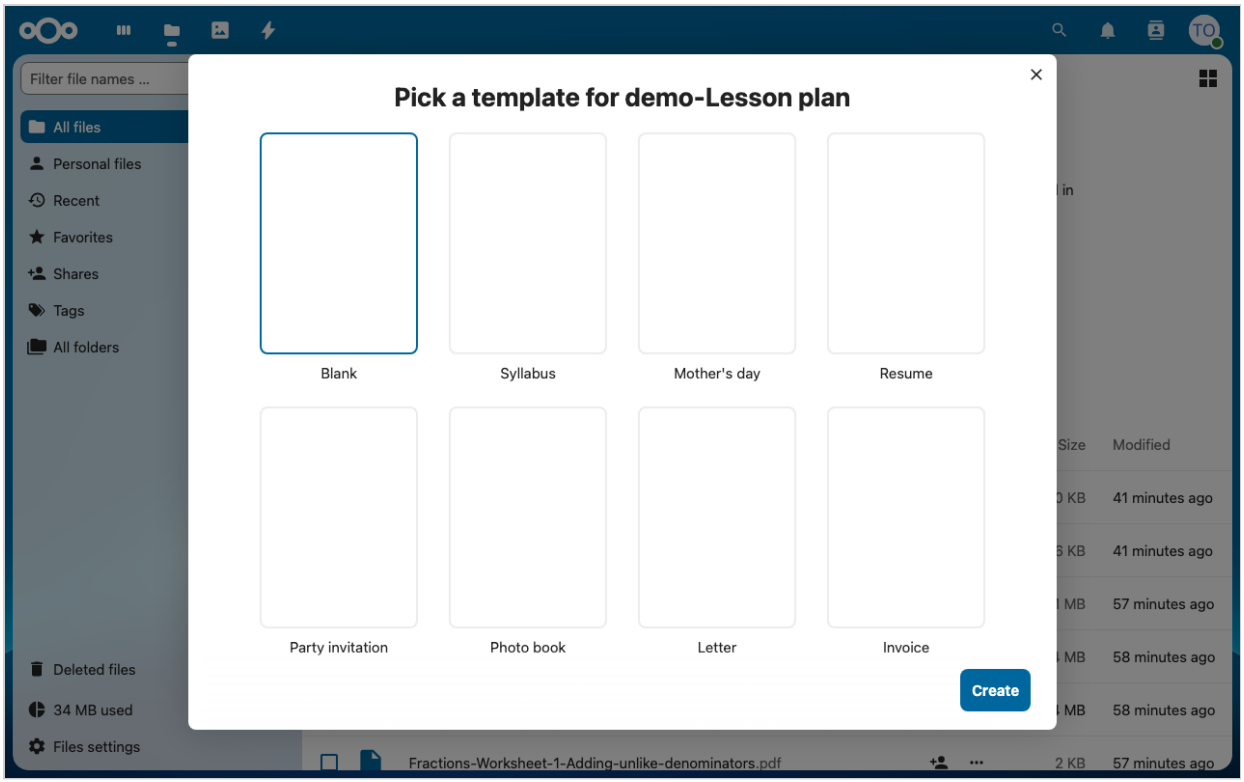

Figure 36. Template

4. Share the file with `demo-teachers` and/or your class group, with editing allowed.

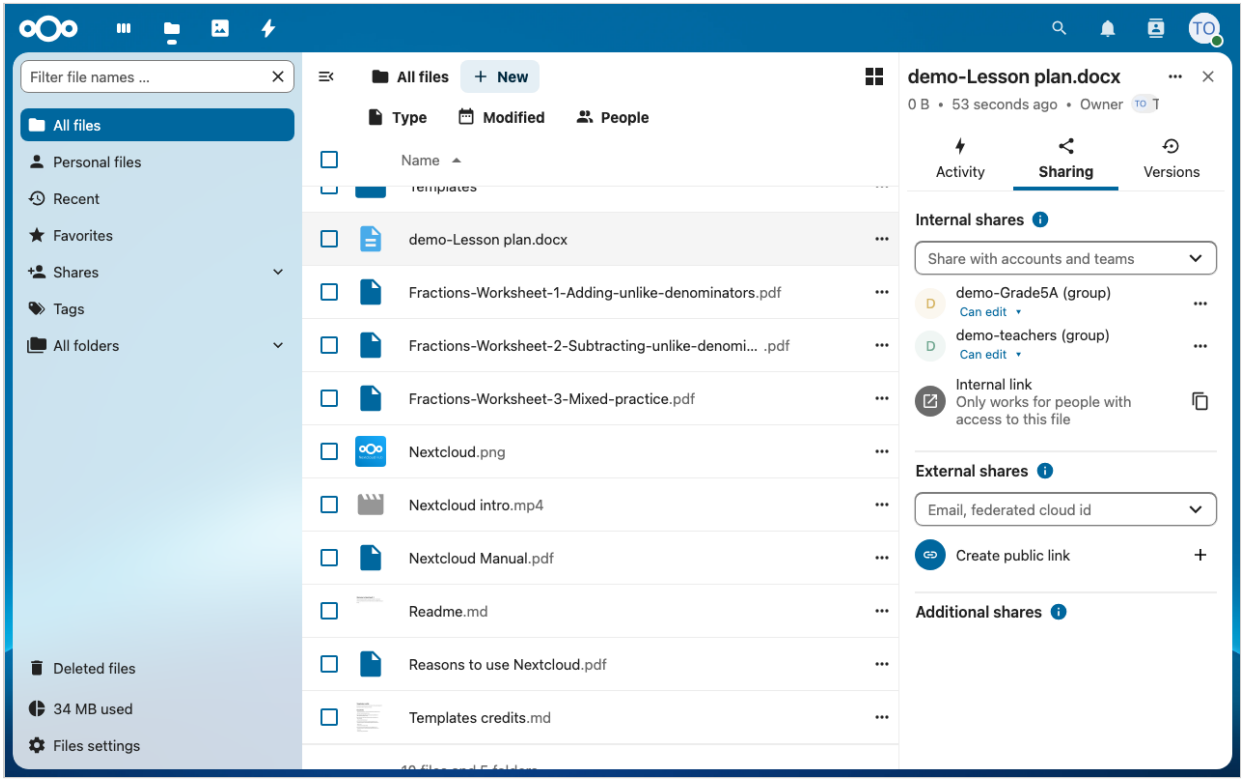

Figure 37. Shared document

5. The document opens in Nextcloud Office. When others open it at the same time, you see their names and cursors.

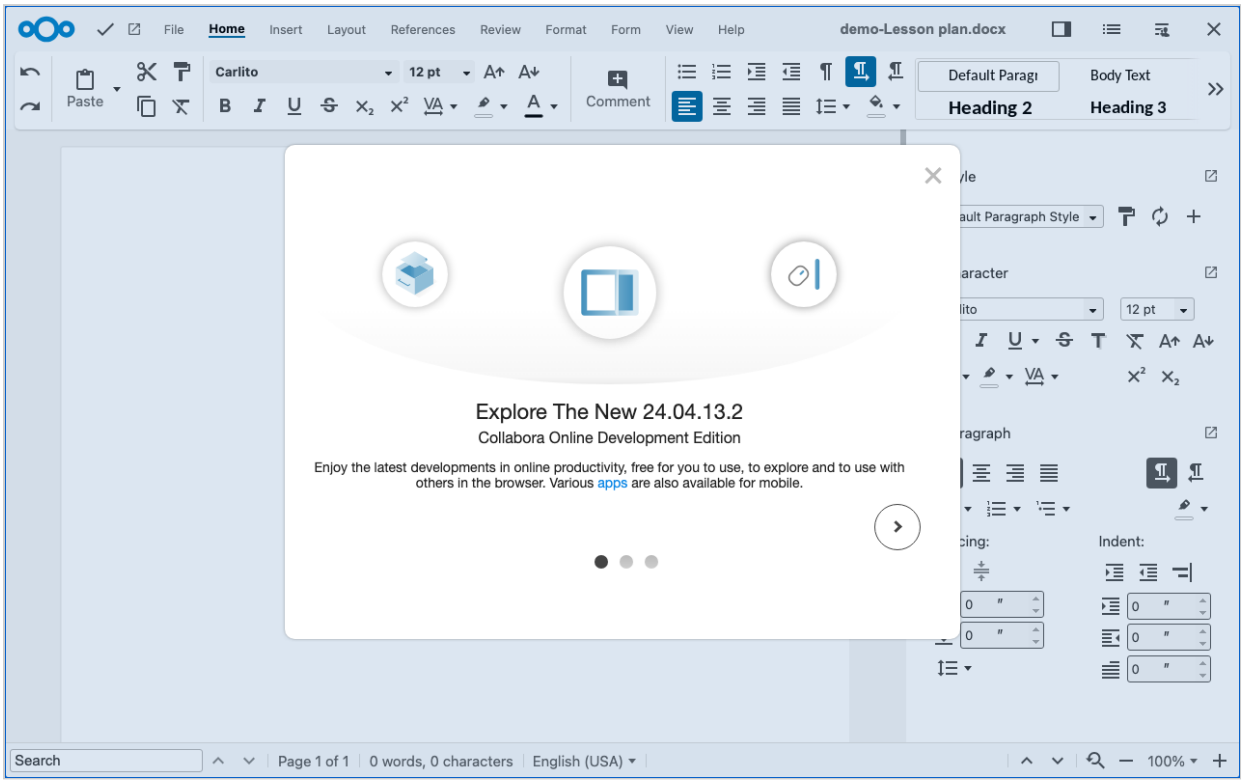

Figure 38. Office editor

5.3 Collect homework (File drop)

Learners upload work, but cannot see each other's work.

1. Open sharing for folder `demo-Drop Zone`.

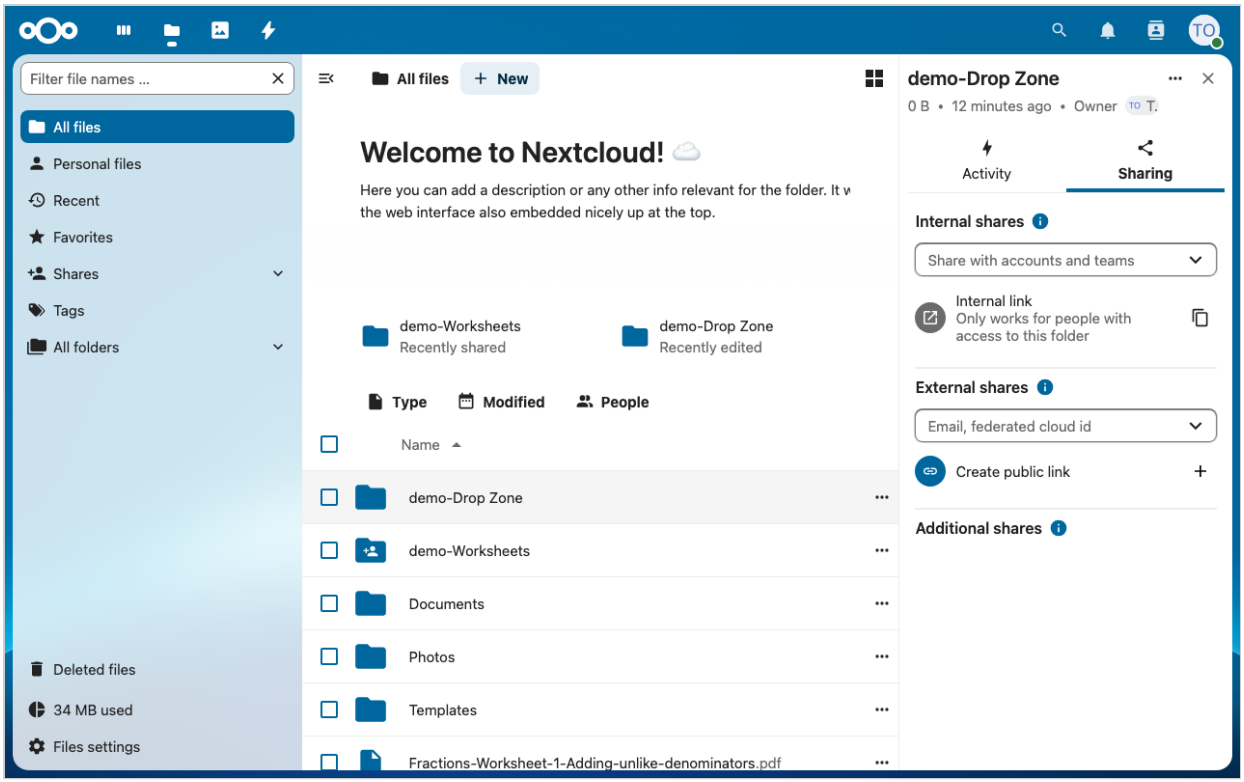

Figure 39. Sharing for Drop Zone

2. Under **External shares**, click **+** next to **Create public link** and choose **File request** (upload only). Copy the link.

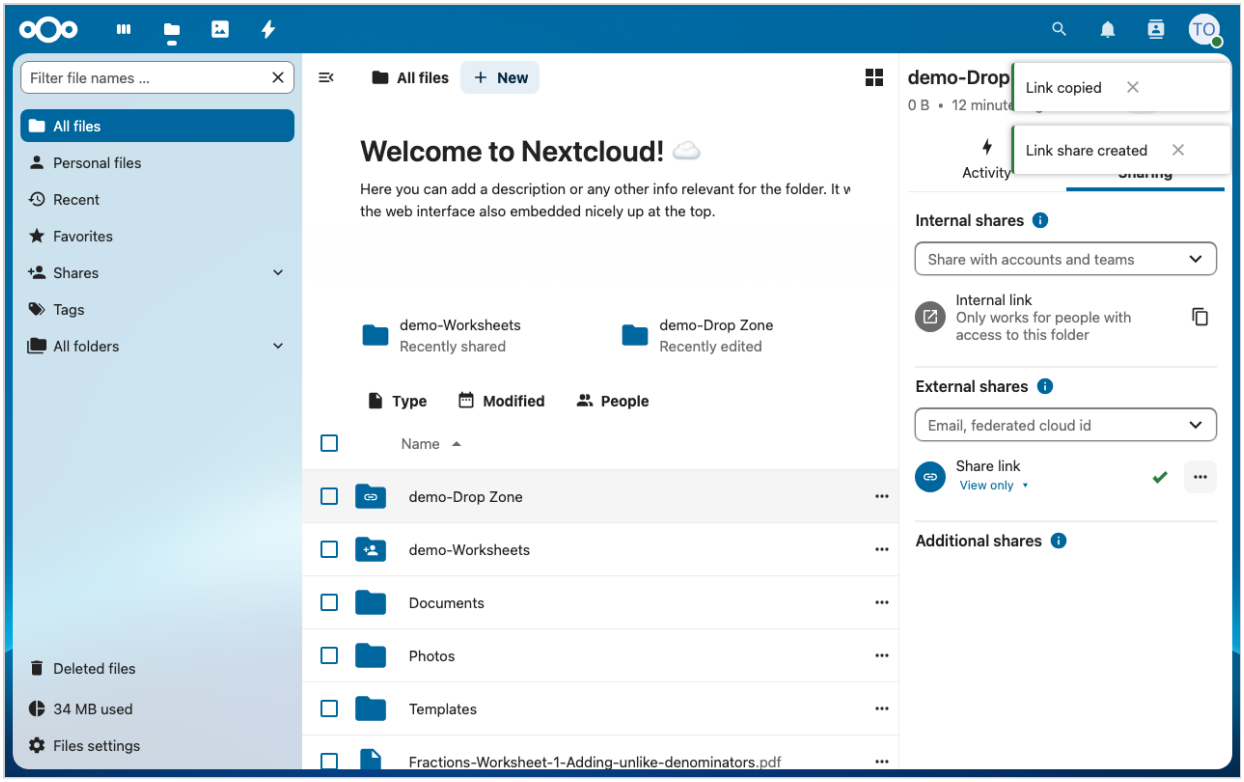

Figure 40. Create link

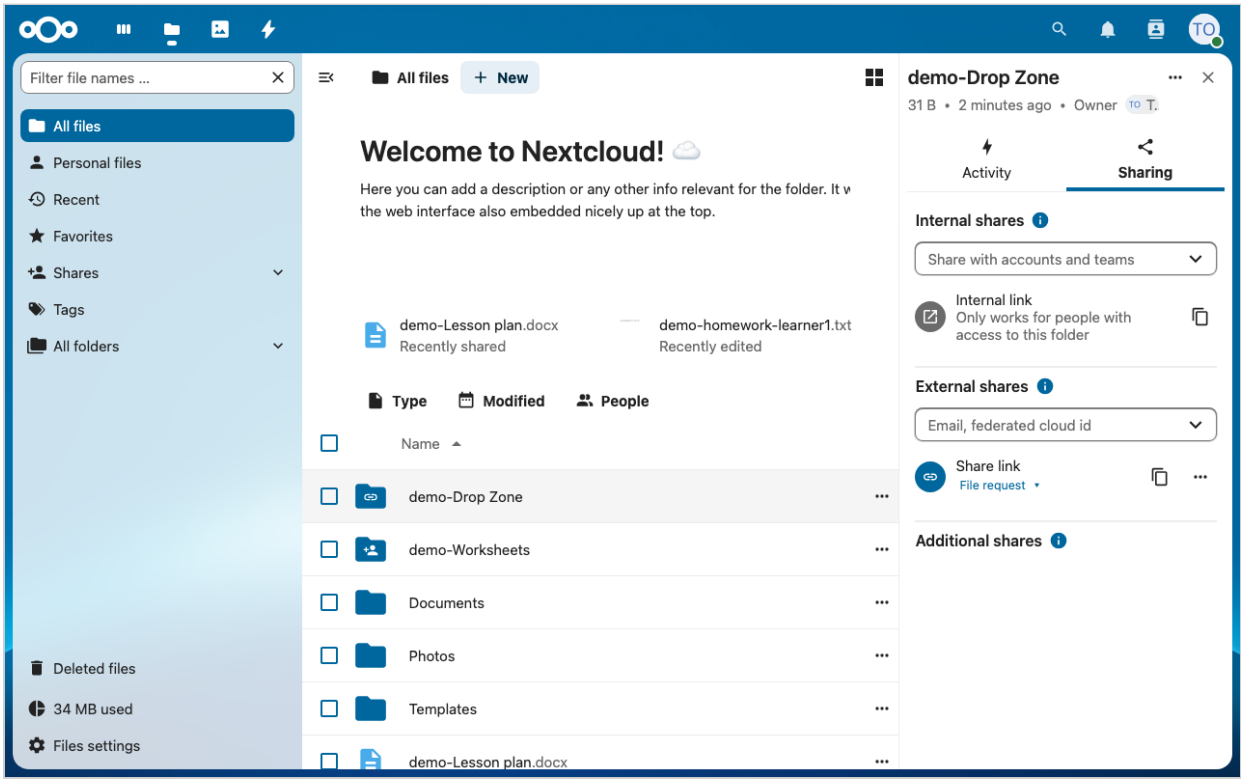

Figure 41. Link created

3. Give learners the link (for example, write it on the board). Uploaded files appear in your `demo-Drop Zone` folder.

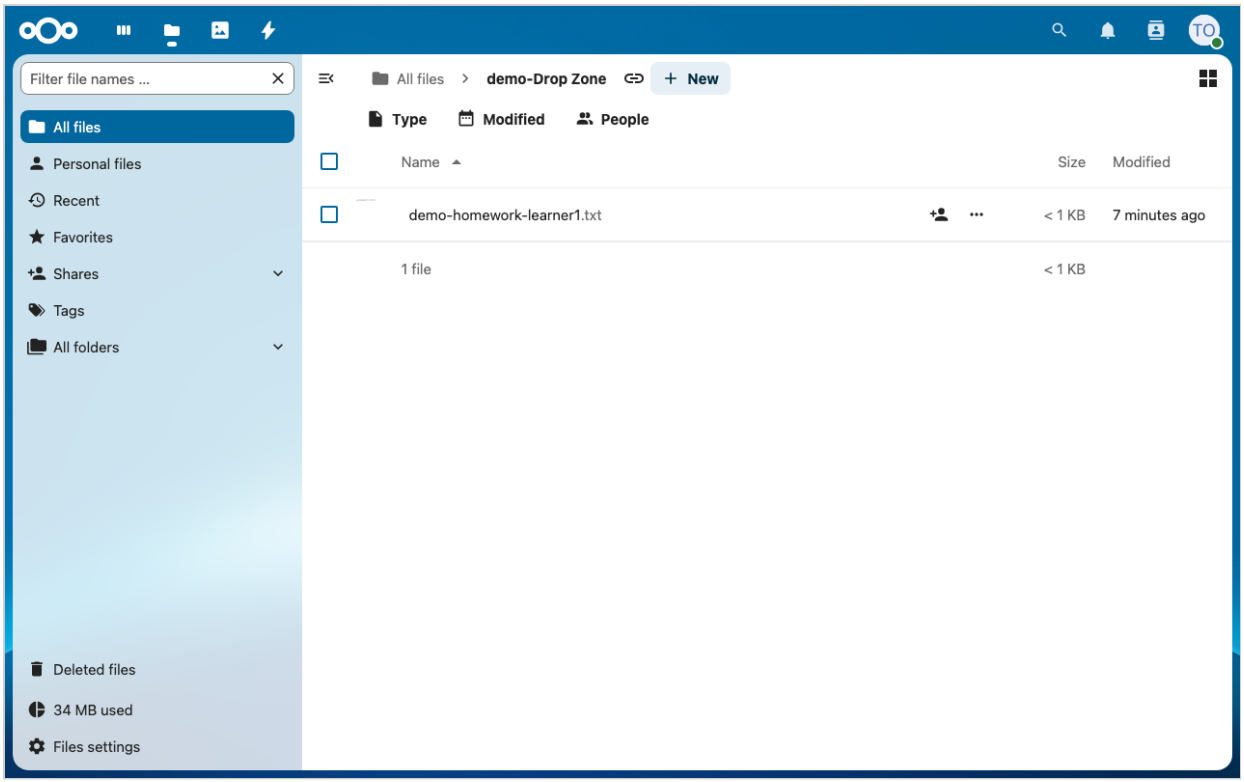

Figure 42. Received homework

6. Nextcloud for learners (try it yourself)

6.1 Open class files and co-edit

1. Sign in to Nextcloud as `demo-learner1` (private window). Shared folders and files appear in **Files** with the teacher's name.

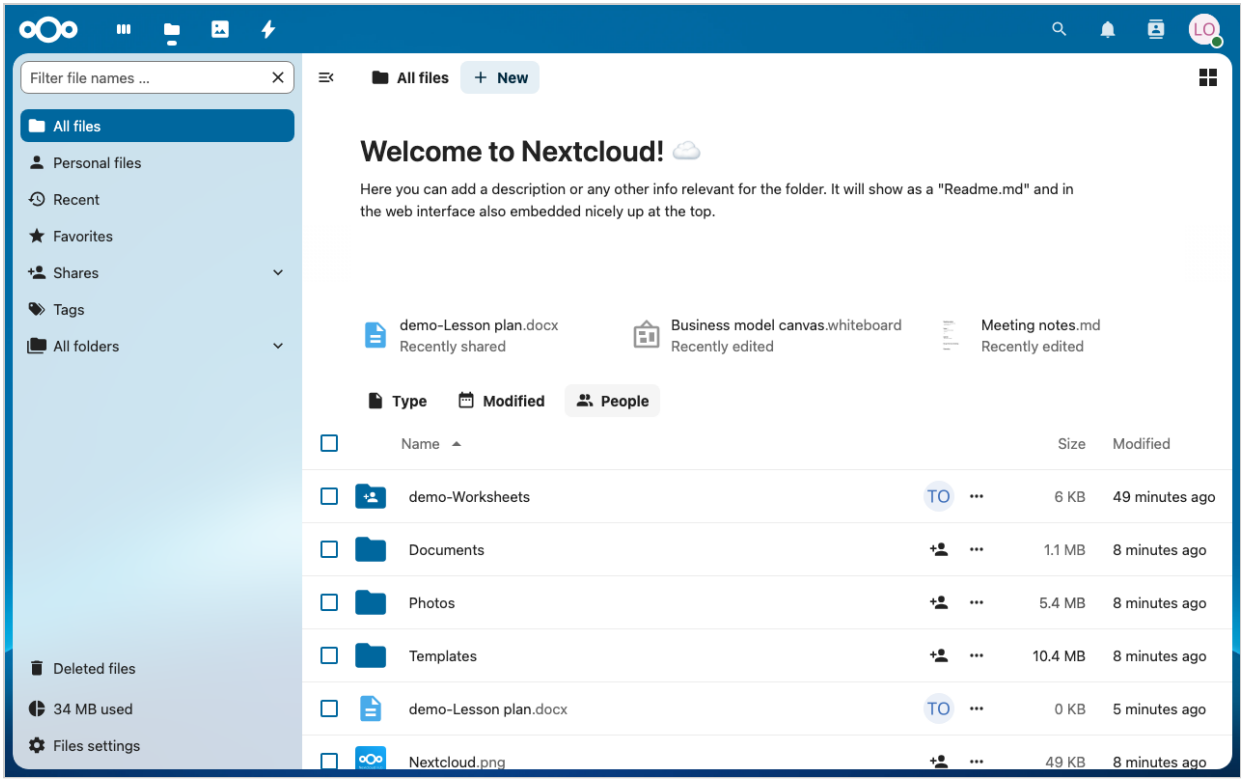

Figure 43. Learner files

2. Open `demo-Worksheets`: the learner can open and download the worksheets, not change them.

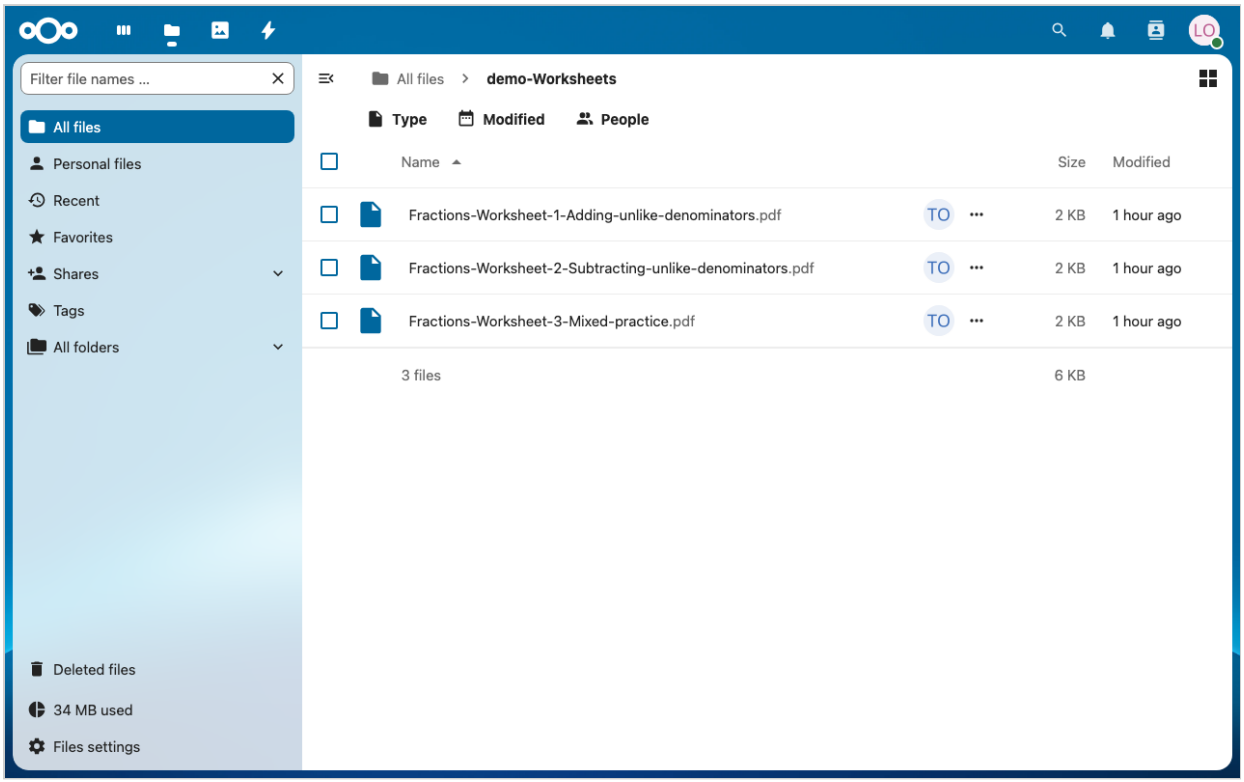

Figure 44. Worksheets

3. Open `demo-Lesson plan.docx`: it opens in Nextcloud Office and the learner can type.

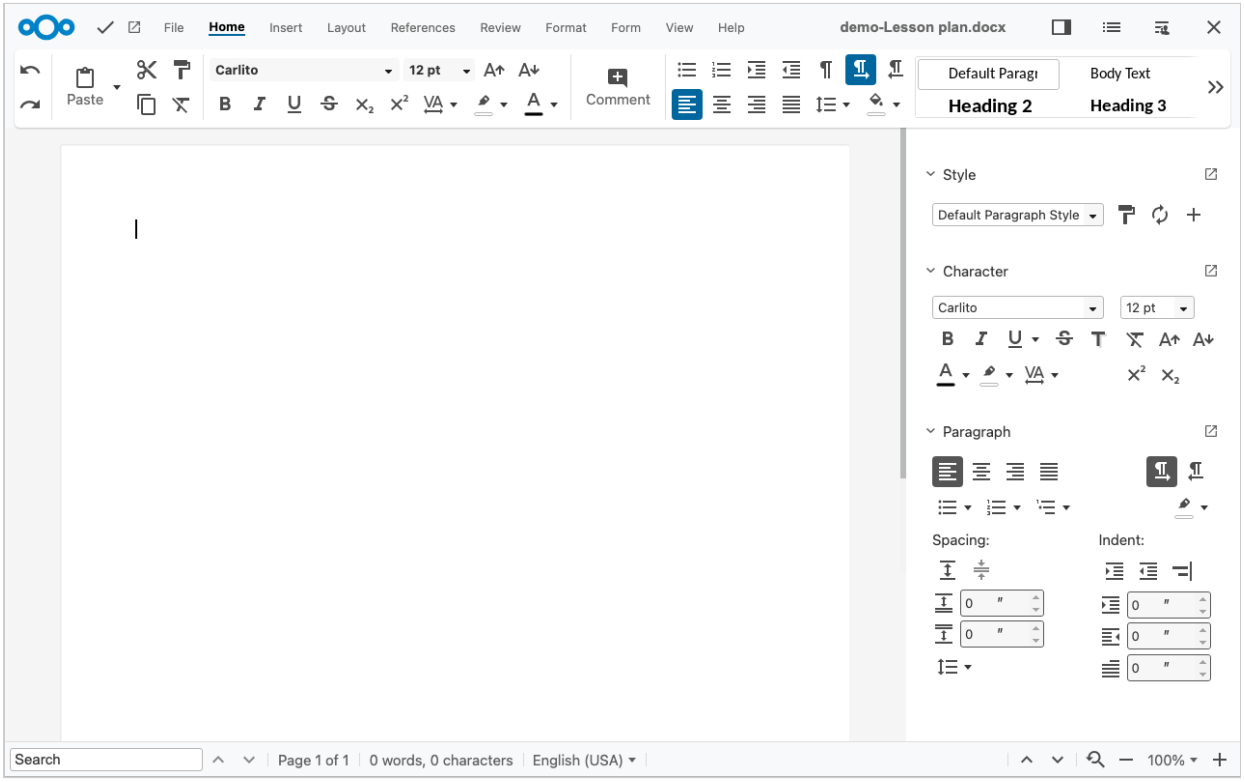

Figure 45. Learner in document

6.2 Hand in homework

1. Open the File drop link from 5.3. The page says **File drop** and shows an **Upload** button; the learner cannot see other files.

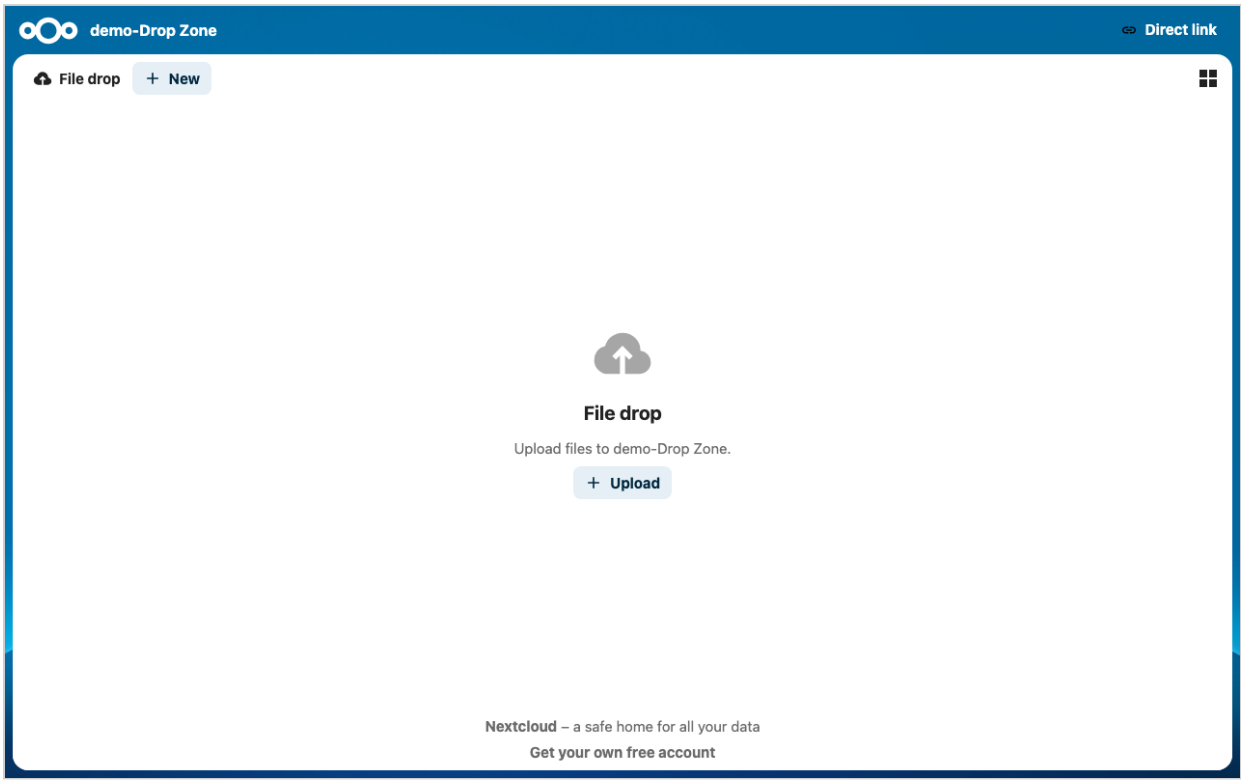

Figure 46. File drop

2. Click **Upload** and choose the file (e.g. a photo of written work). If asked, type your name.

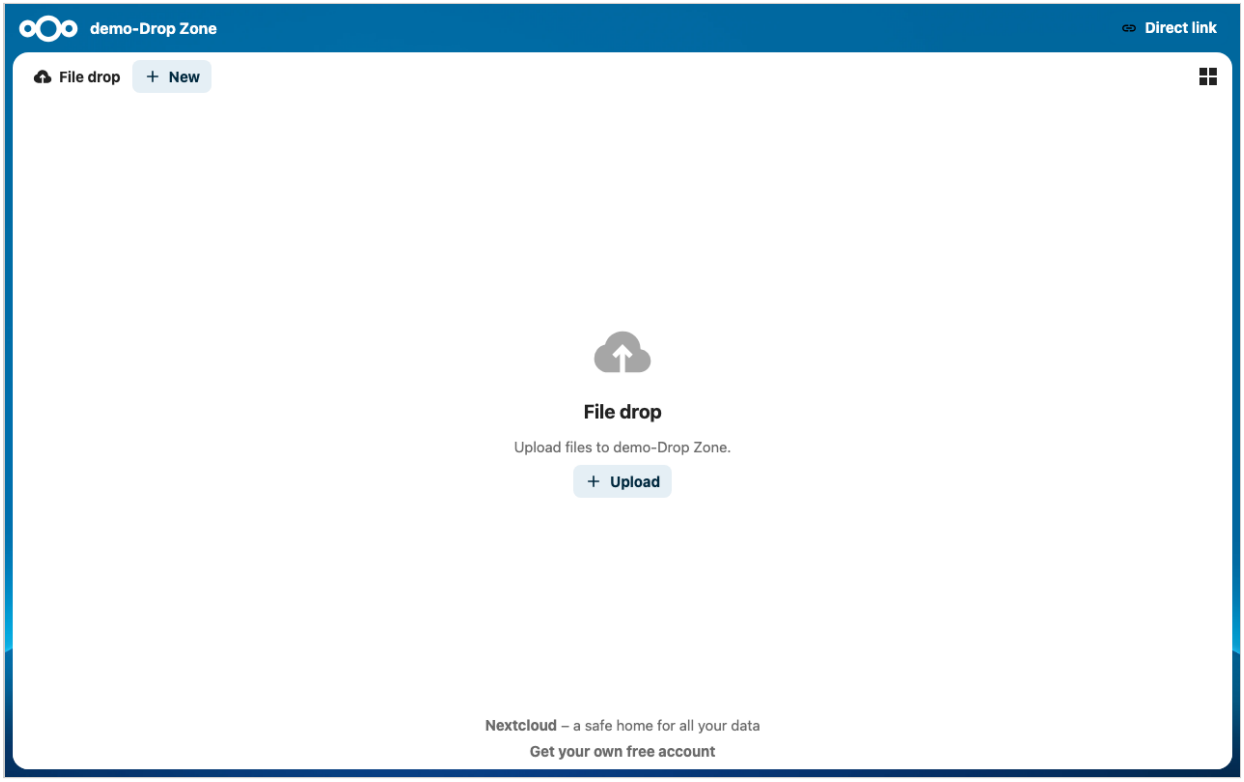

Figure 47. Uploaded

The teacher sees the file in `demo-Drop Zone` (5.3).

7. Wikipedia offline (Kiwix)

The demo has **Wikipedia in simple English** (text, no pictures). It works without internet.

7.1 Look something up and use it in class

1. Open Kiwix from the Console (chapter 2). The library shows the books available.

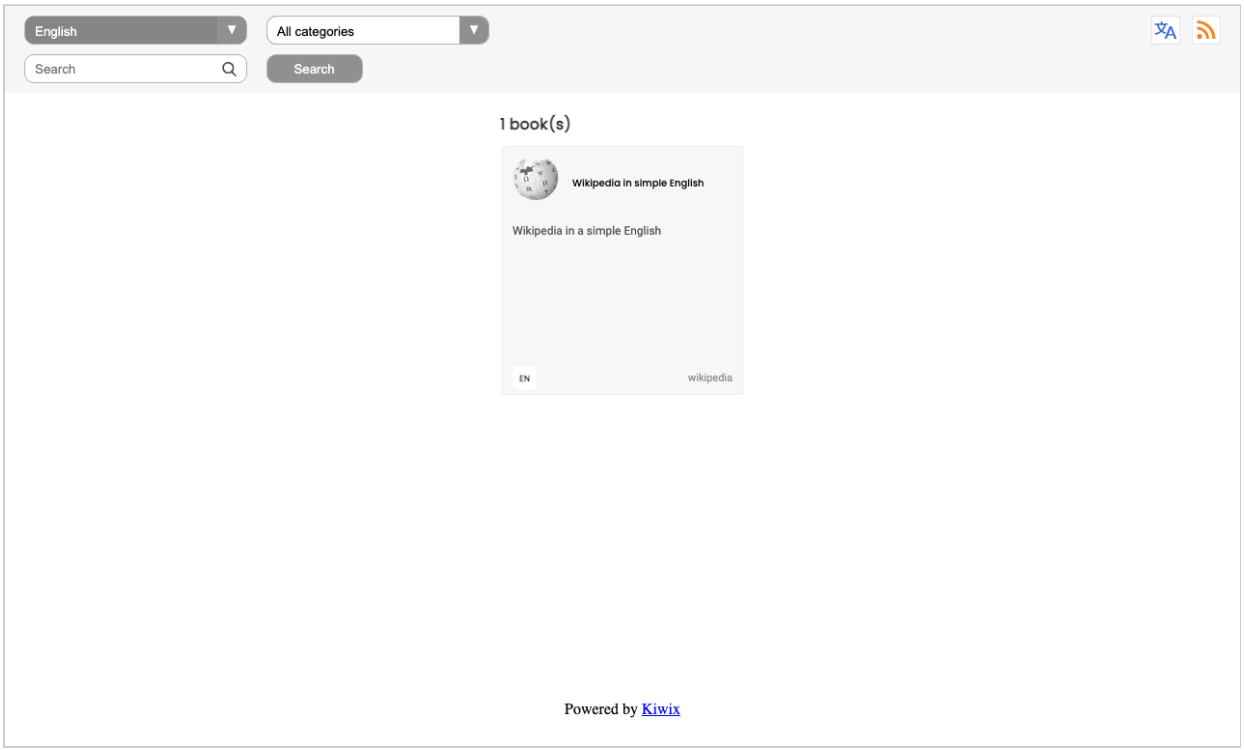

Figure 48. Kiwix library

2. Click **Wikipedia in simple English**. Its welcome page opens.

Figure 49. Wikipedia home

3. Type in the search box at the top, e.g. `Fraction`. Pick a result.

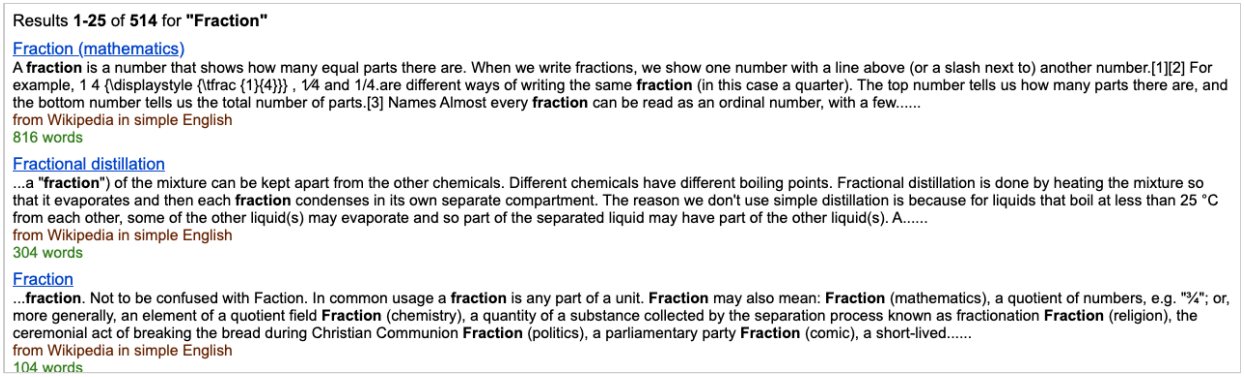

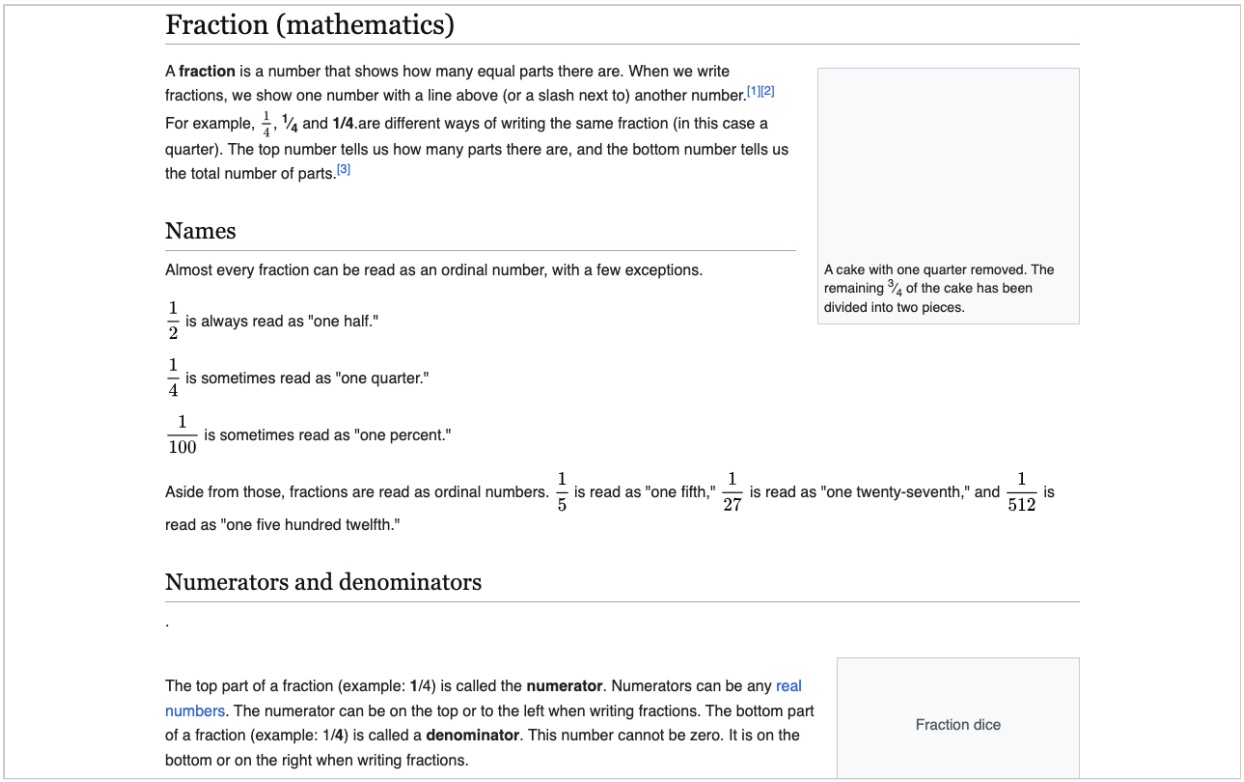

Figure 50. Search results

Fraction (mathematics)

A **fraction** is a number that shows how many equal parts there are. When we write fractions, we show one number with a line above (or a slash next to) another number.[1][2] For example, $\frac{1}{4}$, 1⁄4 and **1/4**.are different ways of writing the same fraction (in this case a quarter). The top number tells us how many parts there are, and the bottom number tells us the total number of parts.[3]

A cake with one quarter removed. The remaining $^3/_4$ of the cake has been divided into two pieces.

Names

Almost every fraction can be read as an ordinal number, with a few exceptions.

$\frac{1}{2}$ is always read as "one half."

$\frac{1}{4}$ is sometimes read as "one quarter."

$\frac{1}{100}$ is sometimes read as "one percent."

Aside from those, fractions are read as ordinal numbers. $\frac{1}{5}$ is read as "one fifth," $\frac{1}{27}$ is read as "one twenty-seventh," and $\frac{1}{512}$ is read as "one five hundred twelfth."

Numerators and denominators

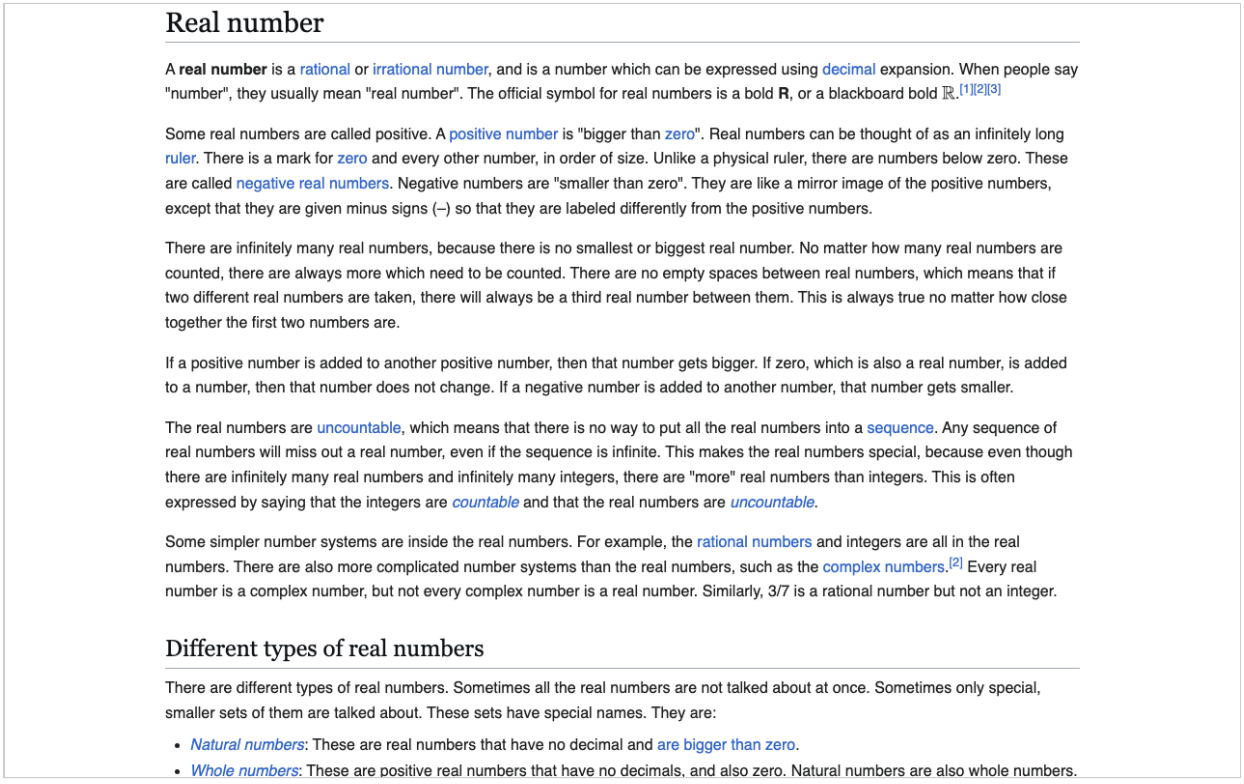

.

The top part of a fraction (example: **1**/4) is called the **numerator**. Numerators can be any real numbers. The numerator can be on the top or to the left when writing fractions. The bottom part of a fraction (example: 1/**4**) is called a **denominator**. This number cannot be zero. It is on the bottom or on the right when writing fractions.

Fraction dice

Figure 51. Fraction article

4. Follow blue links to related articles.

Real number

A **real number** is a rational or irrational number, and is a number which can be expressed using decimal expansion. When people say "number", they usually mean "real number". The official symbol for real numbers is a bold **R**, or a blackboard bold $\mathbb{R}$.[1][2][3]

Some real numbers are called positive. A positive number is "bigger than zero". Real numbers can be thought of as an infinitely long ruler. There is a mark for zero and every other number, in order of size. Unlike a physical ruler, there are numbers below zero. These are called negative real numbers. Negative numbers are "smaller than zero". They are like a mirror image of the positive numbers, except that they are given minus signs (−) so that they are labeled differently from the positive numbers.

There are infinitely many real numbers, because there is no smallest or biggest real number. No matter how many real numbers are counted, there are always more which need to be counted. There are no empty spaces between real numbers, which means that if two different real numbers are taken, there will always be a third real number between them. This is always true no matter how close together the first two numbers are.

If a positive number is added to another positive number, then that number gets bigger. If zero, which is also a real number, is added to a number, then that number does not change. If a negative number is added to another number, that number gets smaller.

The real numbers are uncountable, which means that there is no way to put all the real numbers into a sequence. Any sequence of real numbers will miss out a real number, even if the sequence is infinite. This makes the real numbers special, because even though there are infinitely many real numbers and infinitely many integers, there are "more" real numbers than integers. This is often expressed by saying that the integers are *countable* and that the real numbers are *uncountable*.

Some simpler number systems are inside the real numbers. For example, the rational numbers and integers are all in the real numbers. There are also more complicated number systems than the real numbers, such as the complex numbers.[2] Every real number is a complex number, but not every complex number is a real number. Similarly, 3/7 is a rational number but not an integer.

Different types of real numbers

There are different types of real numbers. Sometimes all the real numbers are not talked about at once. Sometimes only special, smaller sets of them are talked about. These sets have special names. They are:

- *Natural numbers*: These are real numbers that have no decimal and are bigger than zero.
- *Whole numbers*: These are positive real numbers that have no decimals, and also zero. Natural numbers are also whole numbers.

Figure 52. Linked article

Classroom idea. give learners 3 questions to answer from one article; they read on their own device.

8. Your own files: the Files Disk

A **Files Disk** is a USB disk that the operator prepares in the Console (chapter 11). Its content appears in Nextcloud as the folder **School Files**. Use it to bring in material you downloaded elsewhere, for example worksheets on a USB disk.

Good to know:

- **School Files** is only in **Nextcloud**, not in Kolibri.
- Only teachers see the **School Files** folder. Learners get only the files you share with them.
- **The Backup Disk does not save School Files.** Keep your own copy of important files.

8.1 Open School Files

1. Open Nextcloud from the Console and sign in. In **Files** you see the folder **School Files** (marked as **External storage** in the left menu).

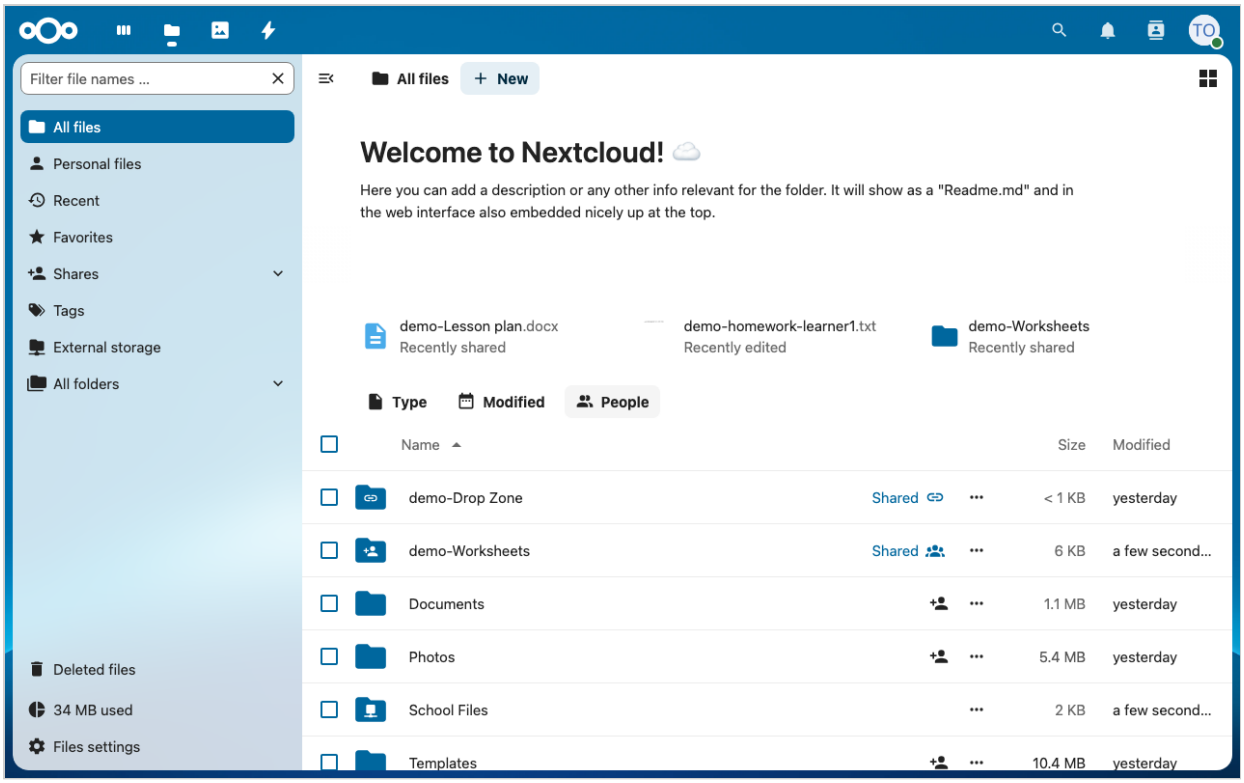

Figure 53. School Files in Nextcloud

2. Open **School Files** to see what is on the disk (here `demo-Fractions-Worksheet-1.pdf`).

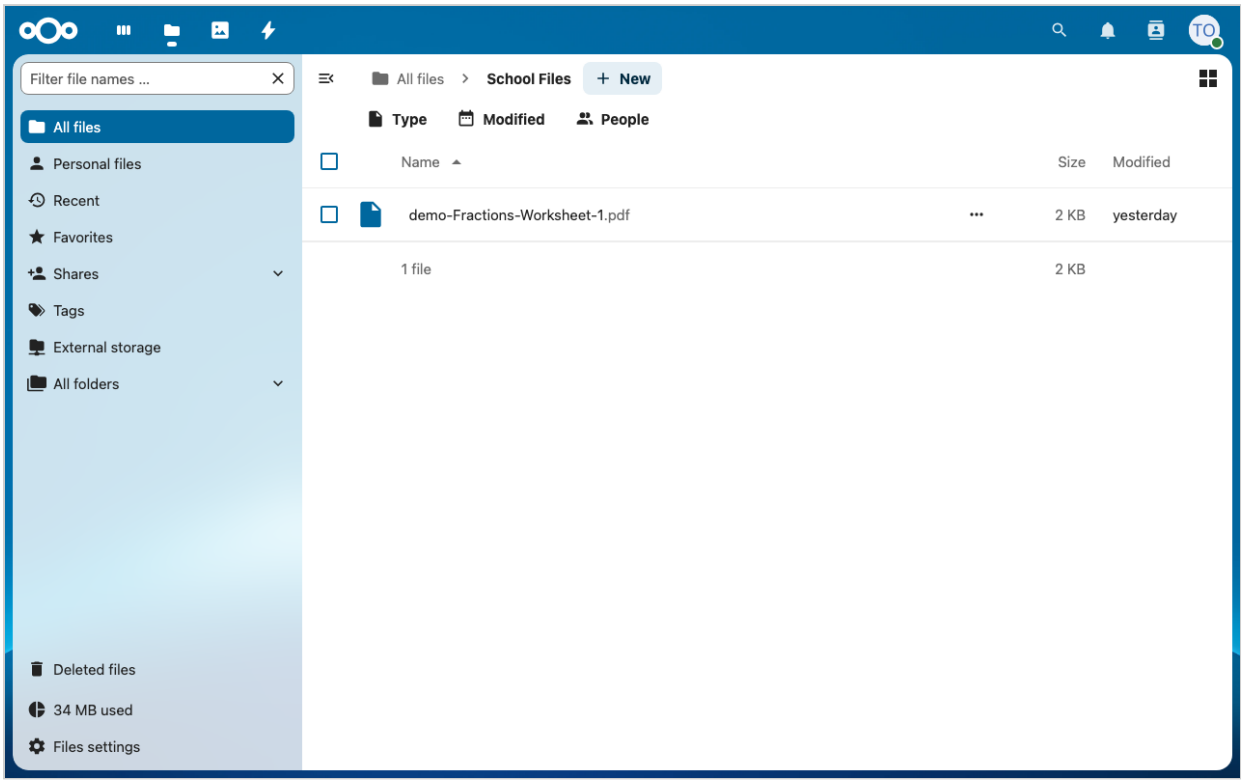

Figure 54. School Files content

8.2 Share a file from School Files with your class

1. On the file's row click ··· (Actions) > **Show sharing options**, or click the share icon.
2. In **Internal shares**, type the class group name (here `demo-Grade5A`) and choose it from the list. Keep **View only**. The group then appears under **Internal shares**.

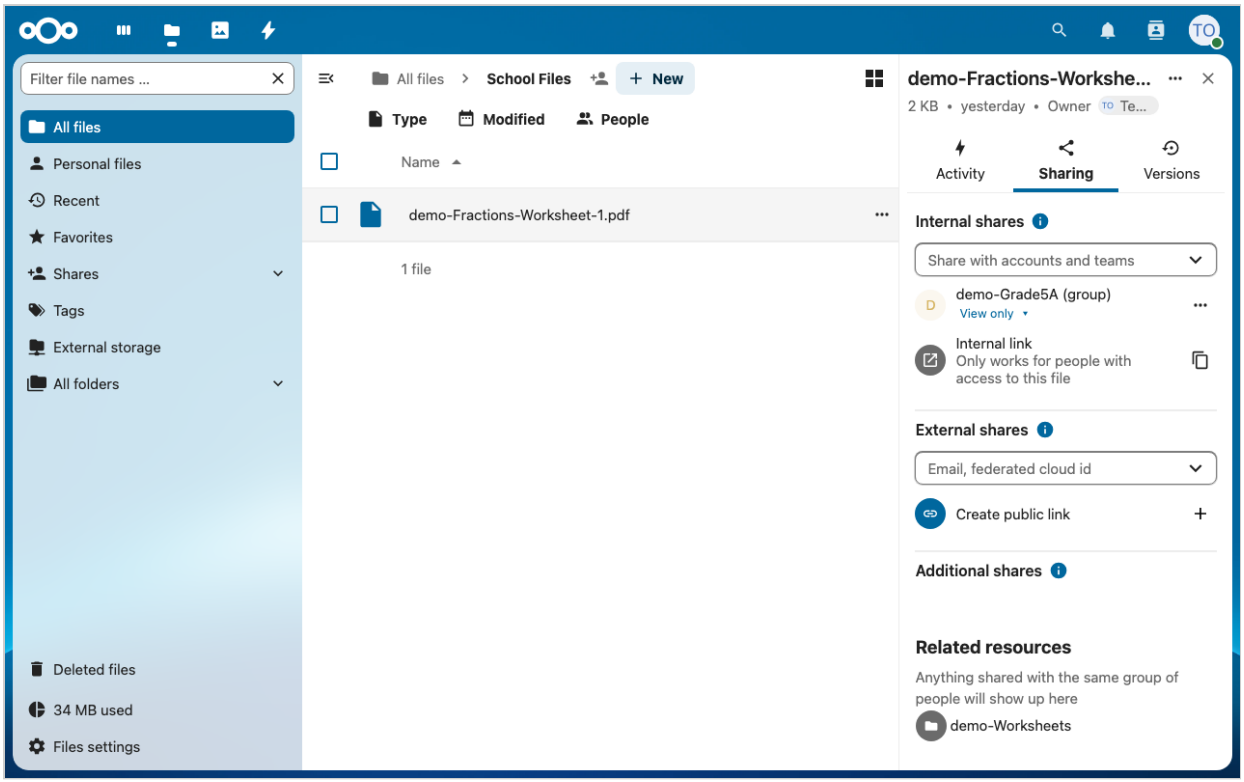

Figure 55. File in School Files shared with demo-Grade5A

3. A learner in that group signs in and finds the file in **All files** and under **Recently shared**.

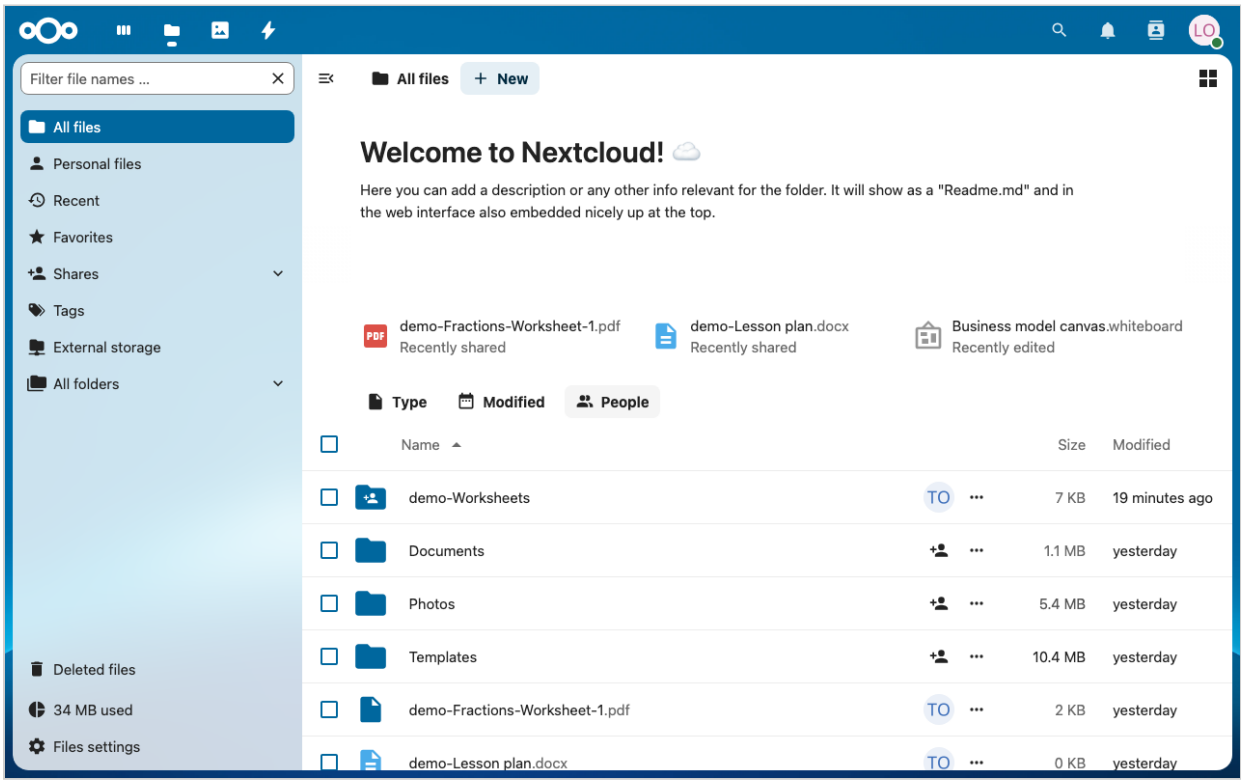

Figure 56. A learner sees the shared file

8.3 Can I put my own files into Kolibri?

Not directly. Kolibri only imports ready-made **Kolibri channels**. Your own videos and PDFs would first have to be built into a channel on Kolibri Studio, which needs internet and an account. Use Nextcloud for your own files, and Kolibri for the prepared lessons.

9. Keeping data safe: the Backup Disk

The operator looks after backups (chapter 11). As a teacher you should know:

- A **Backup Disk** is a separate USB disk with the **backup** badge in the Console.
- It saves the **apps' data**: Kolibri (classes, learners, progress) and Nextcloud (accounts, and the files inside Nextcloud).
- It does **not** save the **School Files** folder (chapter 8).
- During a backup, the app stops for a short time and then starts again. Backups are planned outside lesson time.
- How often backups run (on request, each time the disk is plugged in, or on a schedule) is set by your IDEA contact.
- If the IDEA box breaks, the operator restores the latest backup onto a spare disk. Only the work done after the last backup is lost.
- Never unplug a disk while a backup is running.

Part B

Part B: For the school operator

10. The Console for the operator

This chapter is for the school operator. Do not press **Start**, **Stop** or other action buttons unless your IDEA contact asks you to.

10.1 Operator Login

1. In the Console, click the person icon (top right). The **Operator Login** panel opens with a username and a password field (the eye icon shows or hides the password).

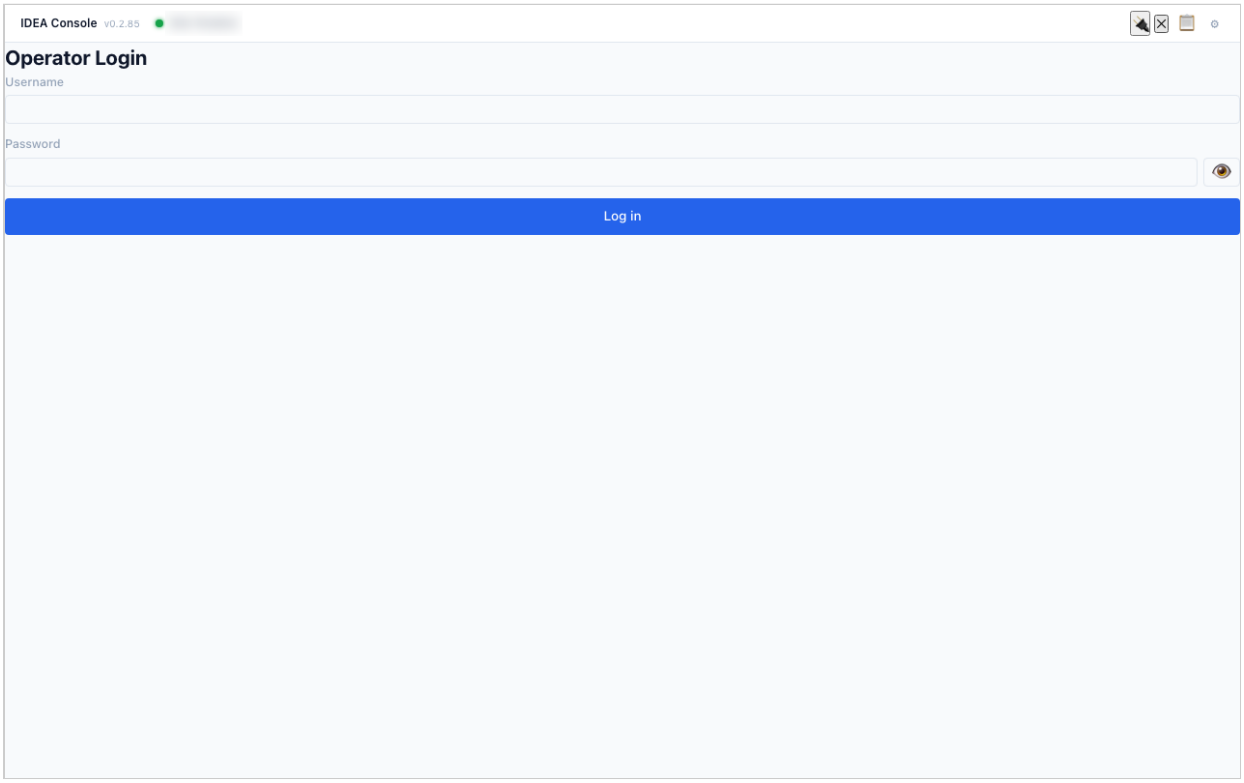

Figure 57. Operator Login

2. Type the operator username and password and click **Log in**. The **Account** panel shows your name, the role **Operator**, **Change Password**, **Manage Operators** and **Log out**.

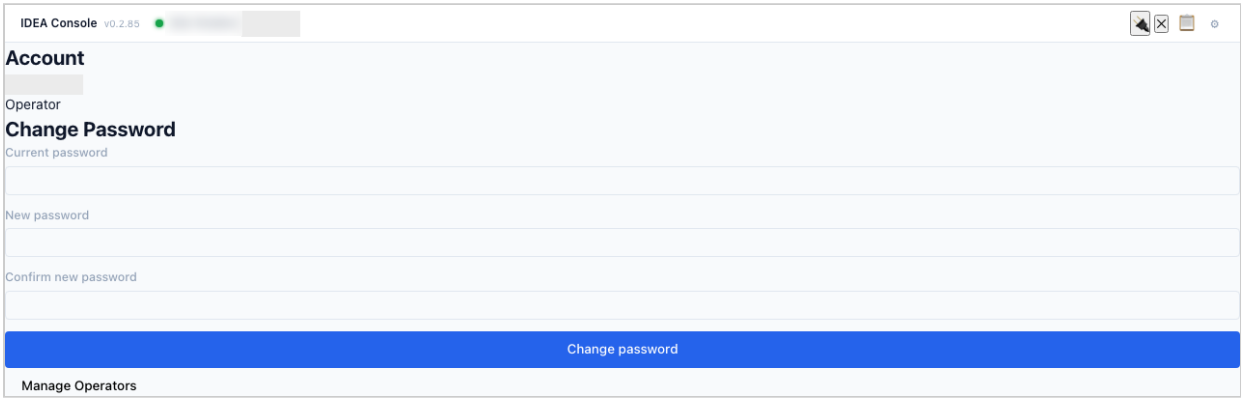

Figure 58. Account panel

3. **Change the default operator password straight away** on a new school box: **Account > Change Password**, type the current password, the new password twice, and click

Change password. Keep the new password with the school head, not on a sticker on the box.

4. Close the panel with ×. Use **Log out** in the same panel when you are done.

10.2 The Network view: the IDEA box and its disks

1. After login the left side shows **NETWORK**: **ALL APPS**, then the IDEA box with a green dot (online) and its disks.

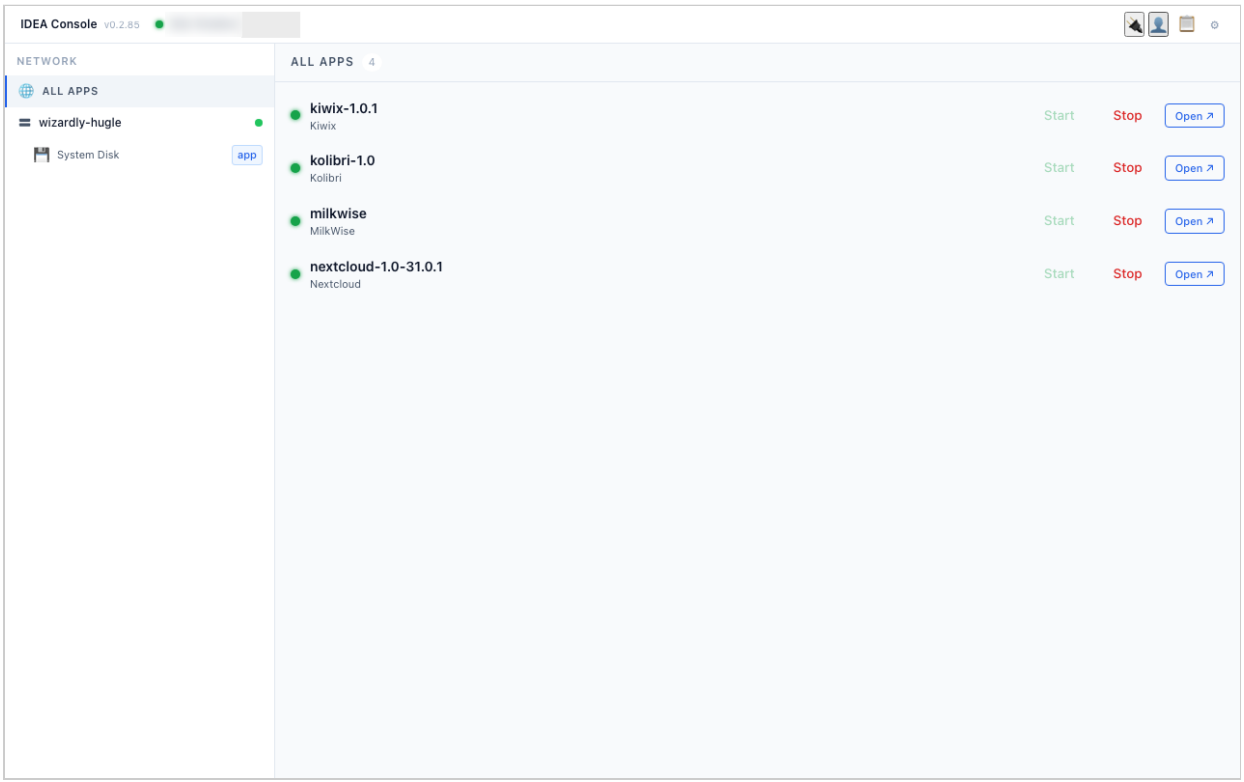

Figure 59. All apps

2. Click the IDEA box name to select it.

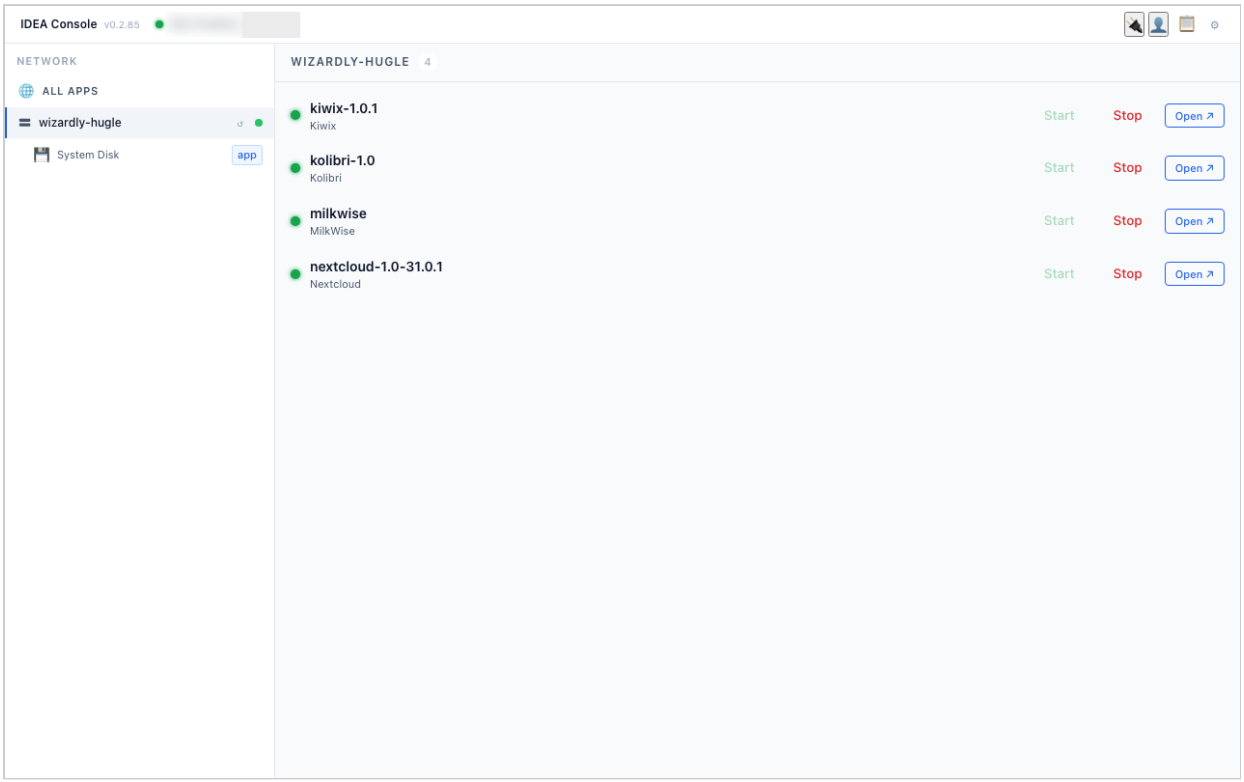

Figure 60. IDEA box selected

3. Click a disk (here **System Disk**). Each disk shows a role badge: **app**, **backup**, **files** or **empty**. The right side lists the apps on that disk.

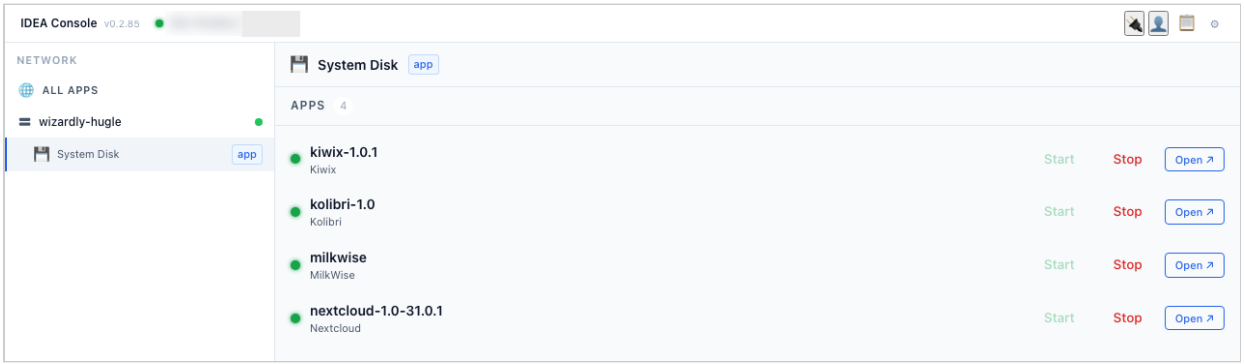

Figure 61. Disk view

10.3 App status

1. Each app row shows the app name and version, a coloured status dot, and the buttons **Start**, **Stop** and **Open ↗**.
2. Click the status dot (**Show details**) to see STATUS (for example **Running**), VERSION, PORT, CREATED, LAST STARTED, **LAST BACKUP**, the description and the container metrics.

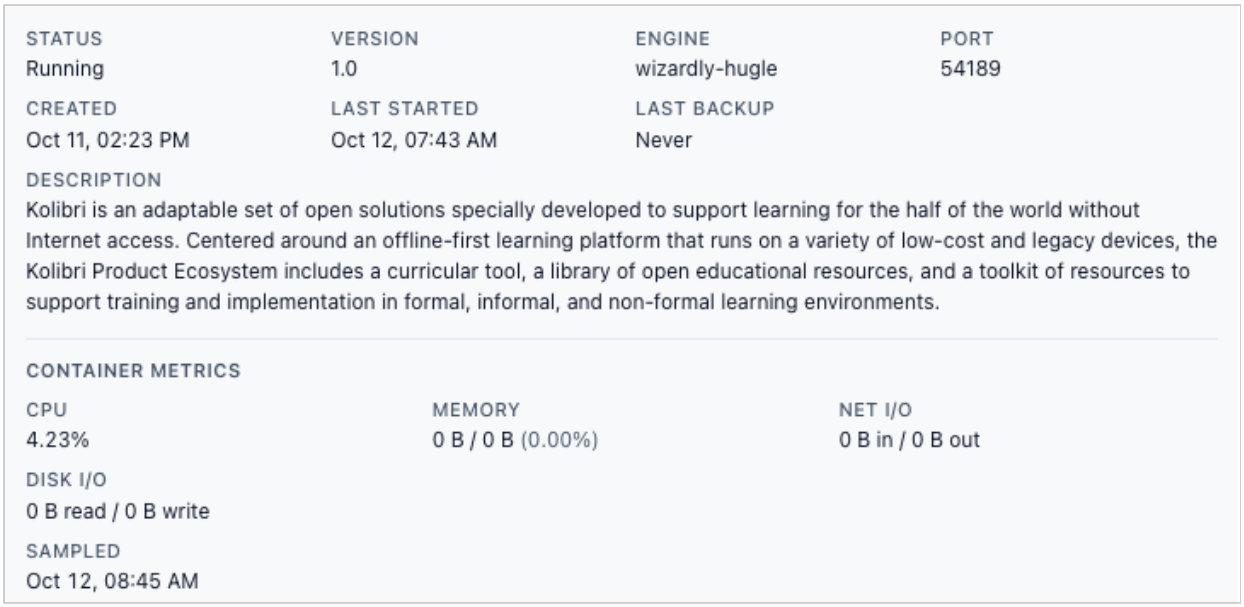

Figure 62. App details

3. To check that an app really works, click **Open ↗**: the app's page must load.
4. Only start or stop an app when your IDEA contact asks you to. Do not touch apps your IDEA contact did not mention.

10.4 Command History

The clipboard icon (top right) lists recent Console commands with ✓ (done) or ✗ (failed) and how long ago. Read it out to your IDEA contact when you report a problem.

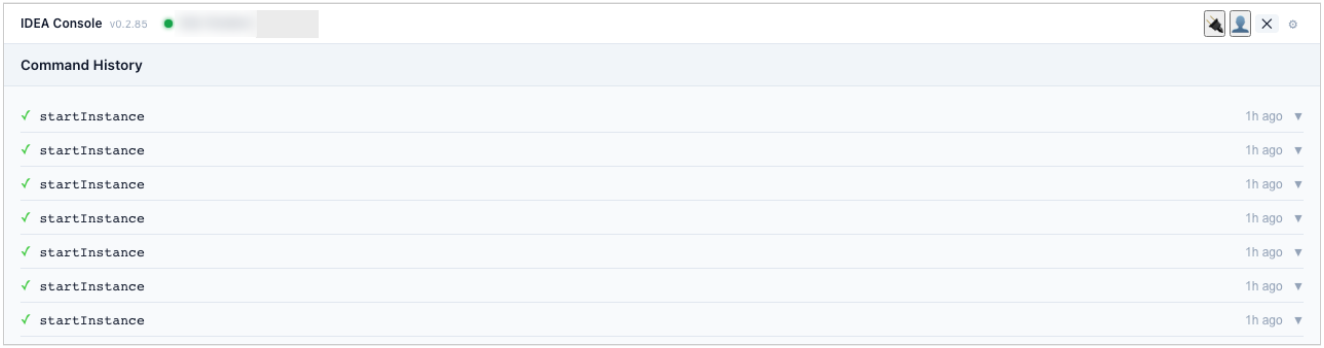

Figure 63. Command History

10.5 Buttons to leave alone

- The small **↺** next to the IDEA box name is **Reboot**: it restarts the whole IDEA box. Never press it during lessons.
- **Erase this disk…**, **Install App**, **Make this a Files Disk**, **Make this a Backup Disk**, **Restore** and **Stop**: only with your IDEA contact on the phone. The System Disk has no Erase button.

11. Disks: Files Disk and Backup Disk

This chapter is for the school operator, with the IDEA contact on the phone.

11.1 A new USB disk

1. A new disk appears under the IDEA box with its model and size and an **UNFORMATTED** badge.

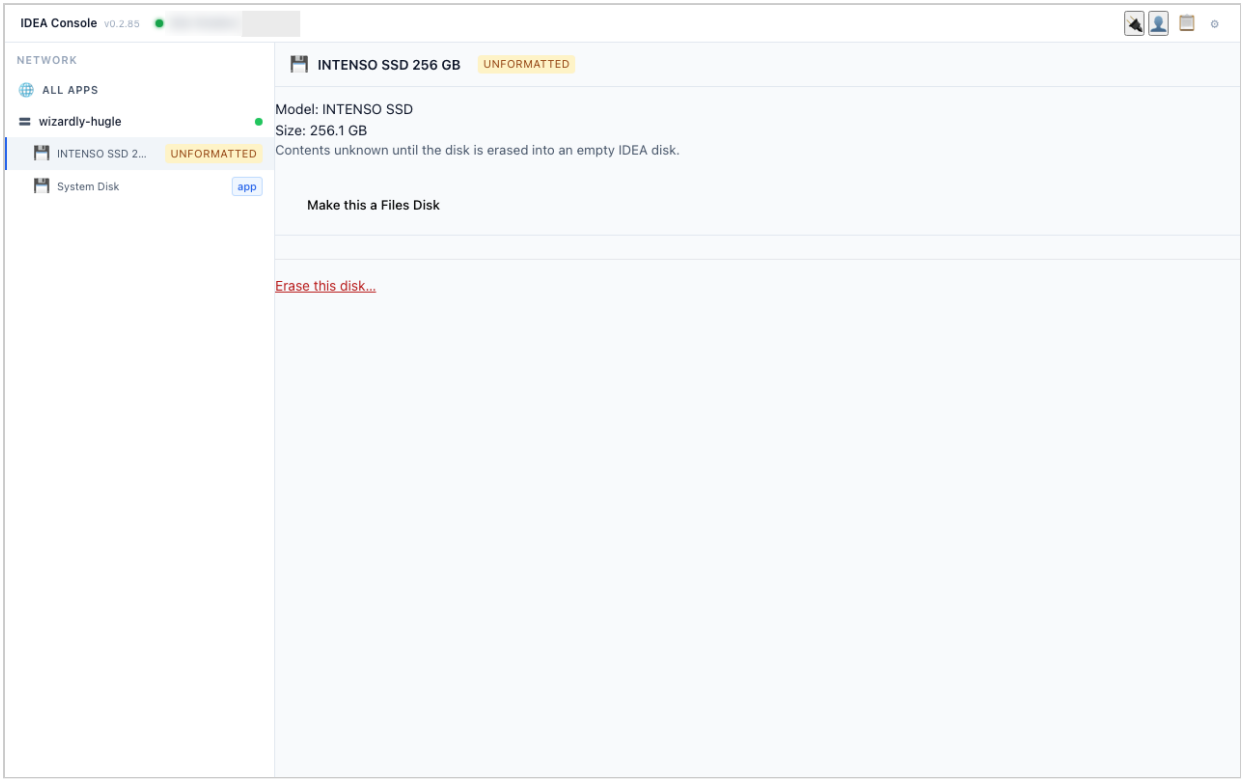

Figure 64. Unformatted disk

2. Its view shows the model, the size and two buttons: **Make this a Files Disk** and **Erase this disk…**.

11.2 Erase a disk

1. Click **Erase this disk…**. The confirmation shows the disk name, model, size and contents, and the red warning "This erases everything on the disk…".
2. Check the **size and contents**: several disks can have the same name (for example **IDEA Disk**). Make sure it is not the Backup Disk.
3. Type the disk name exactly as the dialog asks. The **Erase this disk** button stays grey until the name is right. Press **Cancel** if anything looks wrong.

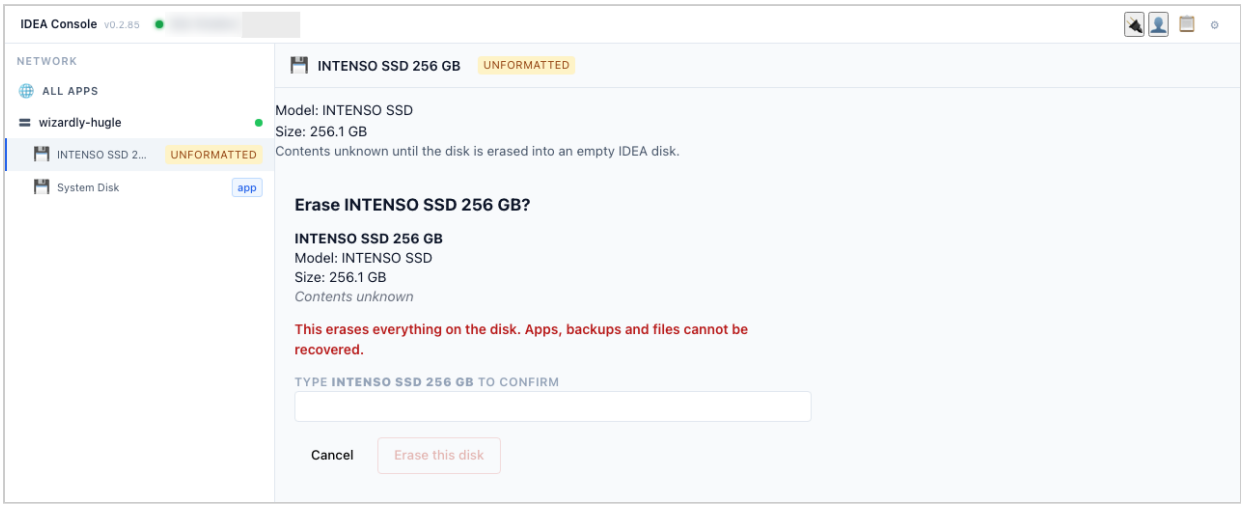

Figure 65. Erase confirmation

4. After the erase, the disk shows as an **IDEA Disk** with the **empty** badge.

> **A Files Disk that Nextcloud is using cannot be erased.** Ask your IDEA contact to stop Nextcloud first.

11.3 Make a Files Disk

1. Select the **IDEA Disk** marked **empty**. The view asks "What would you like to do with this disk?": **Make this a Files Disk**, **Make this a Backup Disk** or **Install App**.

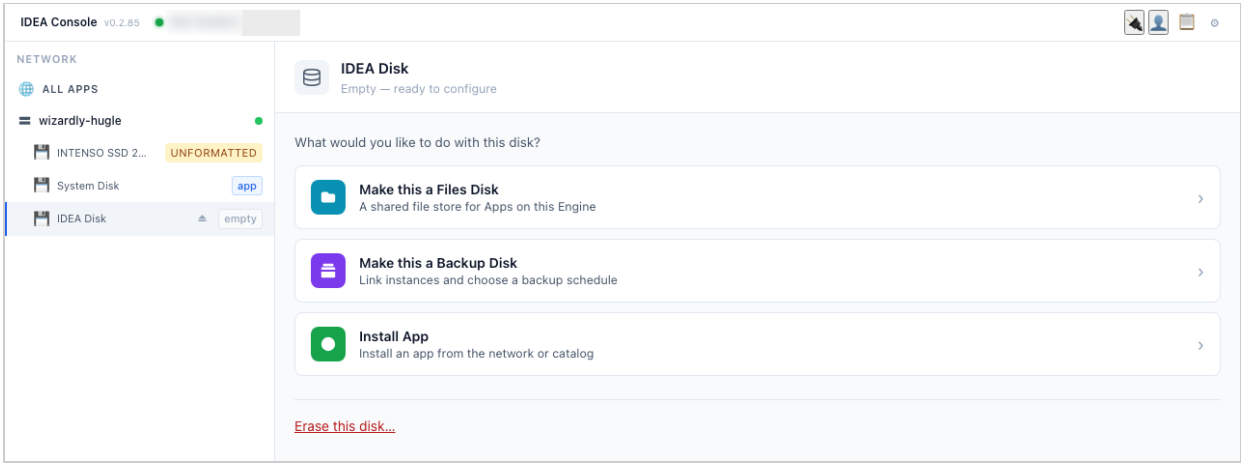

Figure 66. Empty IDEA Disk

2. Click **Make this a Files Disk**. The panel says "Nothing on the disk is erased", with **SHARE NAME** filled in as **School Files**. Click **Make this a Files Disk**.

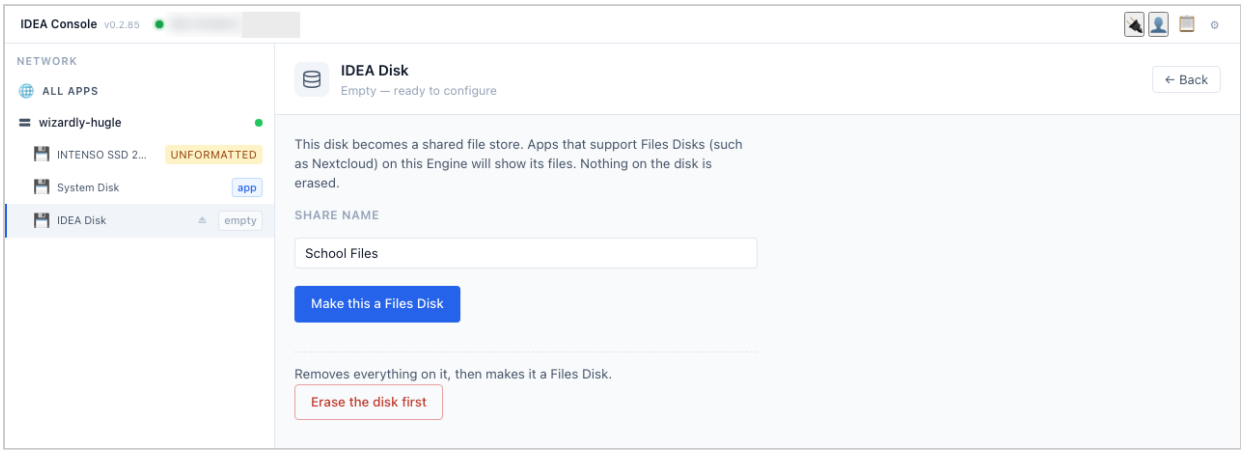

Figure 67. Make this a Files Disk

3. After a short wait the disk shows the **files** badge, "Share name: School Files", the free space, an **Eject** button and **Erase this disk…**. Once your IDEA contact has linked it, the view also says **Available in: Nextcloud**. Teachers then find it in Nextcloud (chapter 8).

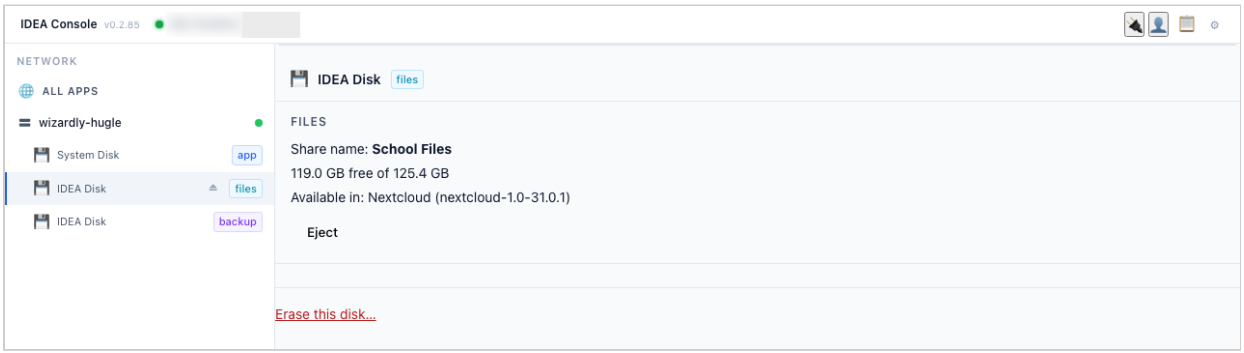

Figure 68. Files Disk available in Nextcloud

11.4 Eject a disk

A USB disk has a small ⏏ icon next to its name in the Network list and an **Eject** button in its disk view. The System Disk has none. Never eject or unplug a disk during a backup.

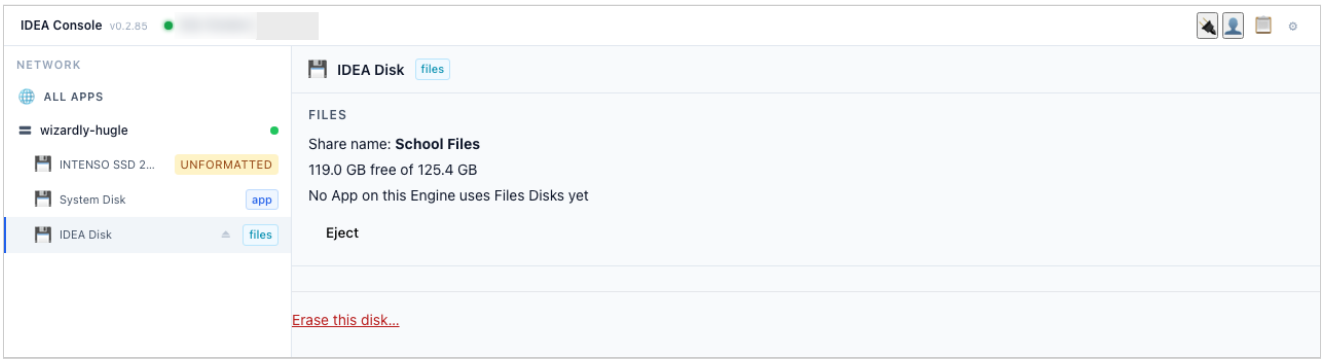

Figure 69. Eject button on a Files Disk

11.5 Make a Backup Disk

1. Select an **IDEA Disk** marked **empty** and click **Make this a Backup Disk**.

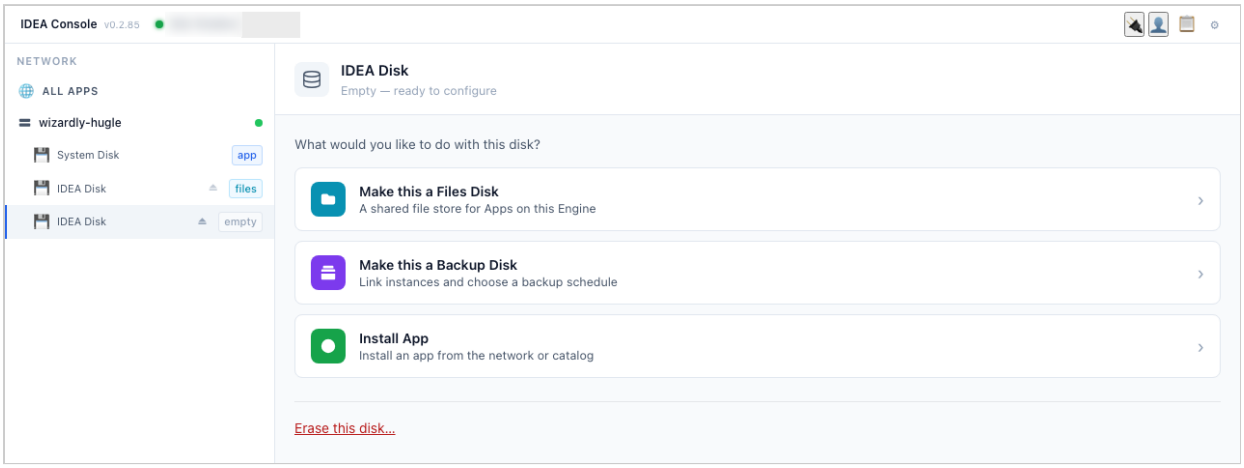

Figure 70. Empty disk options

2. Choose when backups run: **On demand** (only when you press **Back up**), **Immediate** (as soon as the disk is plugged in) or **Scheduled**. Your IDEA contact tells you which.

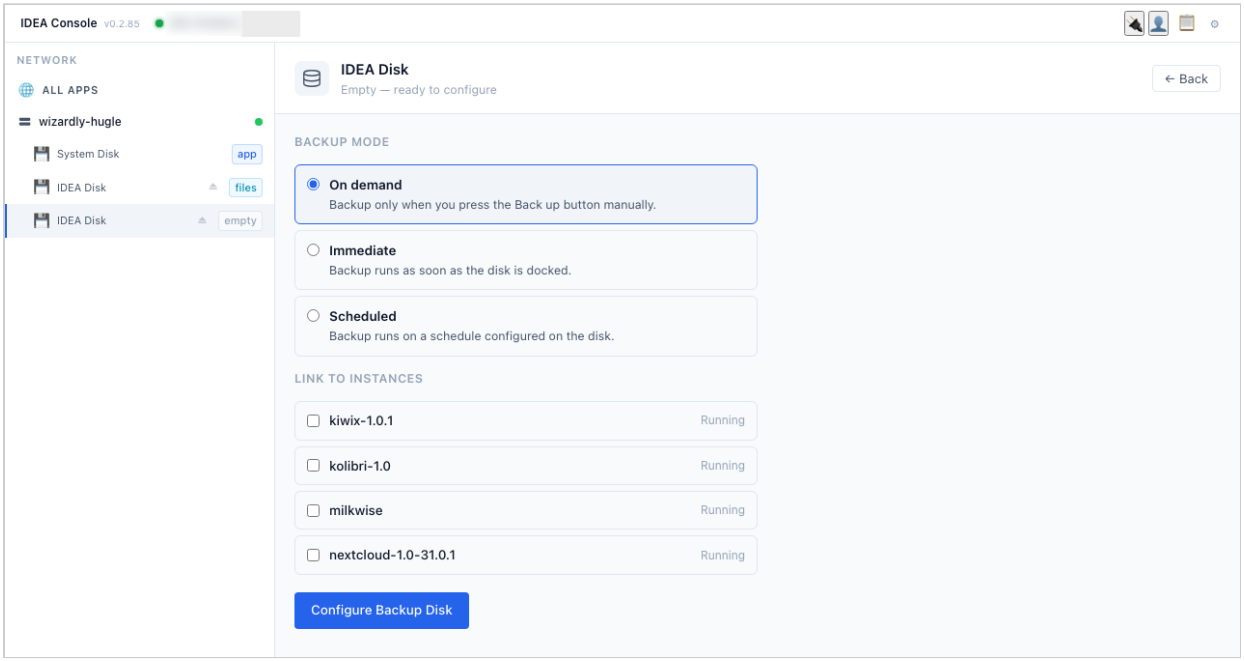

Figure 71. Backup mode

3. Under **LINK TO INSTANCES**, tick only the school apps to protect: Kolibri and Nextcloud.

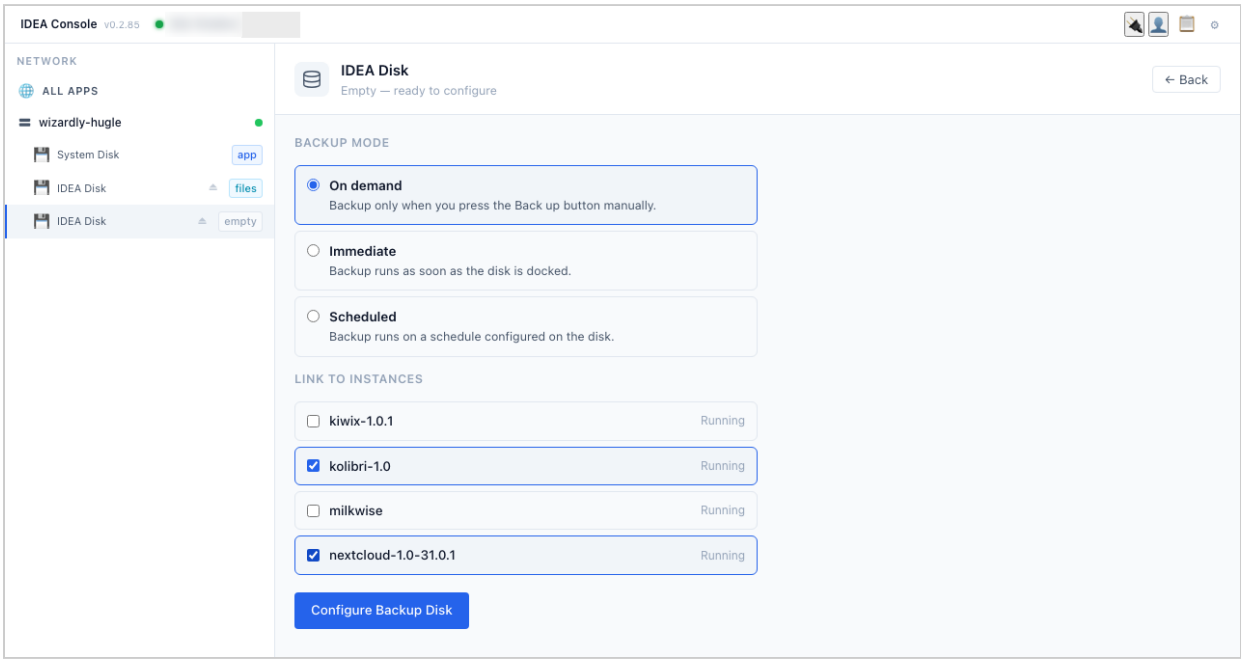

Figure 72. Linked apps

4. Click **Configure Backup Disk**. The disk gets the **backup** badge and a **Backups** list with each linked app.

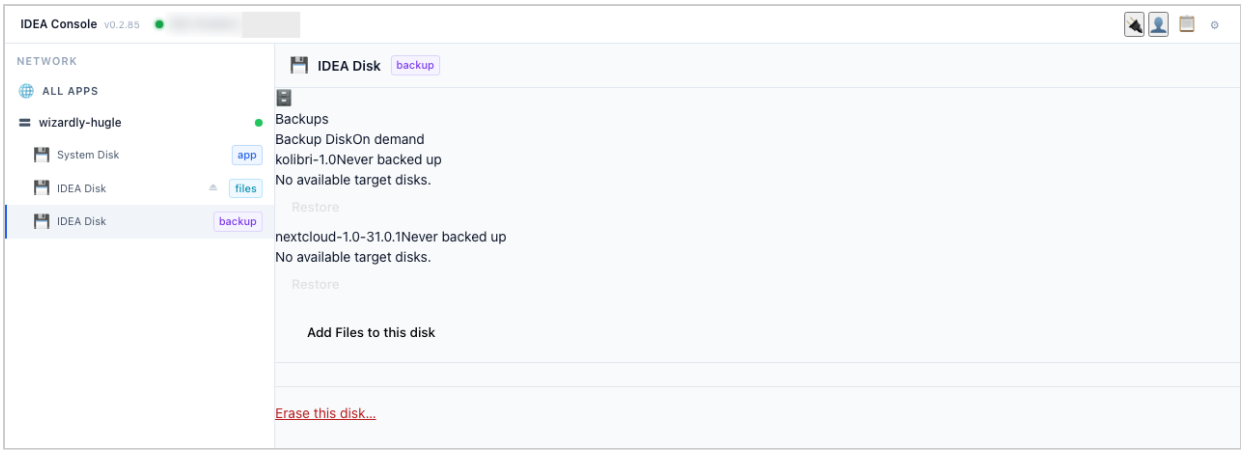

Figure 73. Backup Disk configured

11.6 Run a backup

1. In **ALL APPS**, each linked app row has a **Back up** button next to Start, Stop and Open. Click it for Kolibri.

> **Screenshot pending retake:** Back up clicked.

2. The app stops for a short time while it is copied, then starts again. The Console shows the progress. Do this outside lesson time.

> **Screenshot pending retake:** Backup in progress.

3. When it is done, the Backup Disk's **Backups** list shows **Last backup** with the date and time for each app. Repeat for Nextcloud.

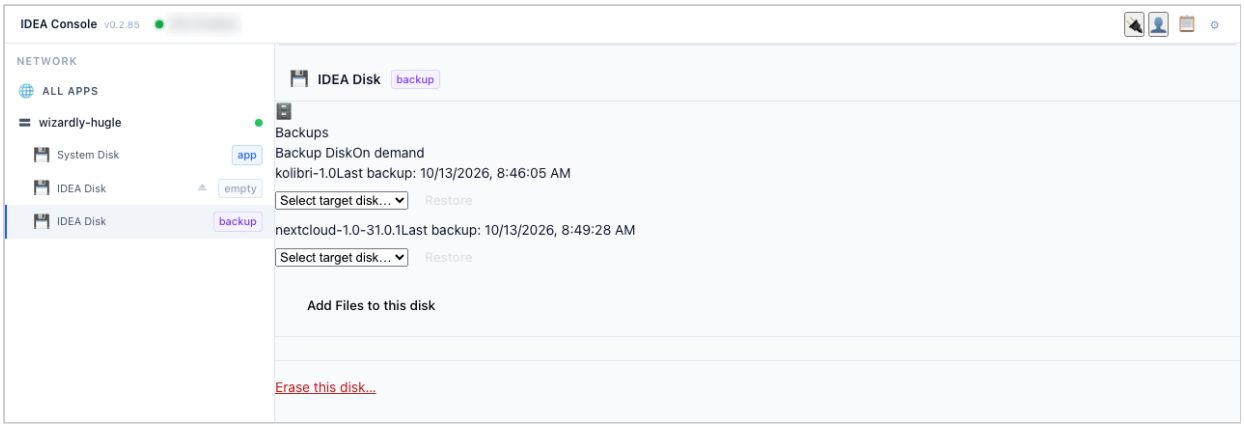

Figure 74. Last backup for both apps

11.7 Restore after a breakdown

You need a **spare disk** (an empty IDEA Disk) to restore onto.

1. Open the **Backup Disk**. Each app in the **Backups** list shows **Last backup**, a **Select target disk…** list and a **Restore** button (grey until a target is chosen).
2. In **Select target disk…** choose the spare disk. Only spare disks are offered. Click **Restore**.

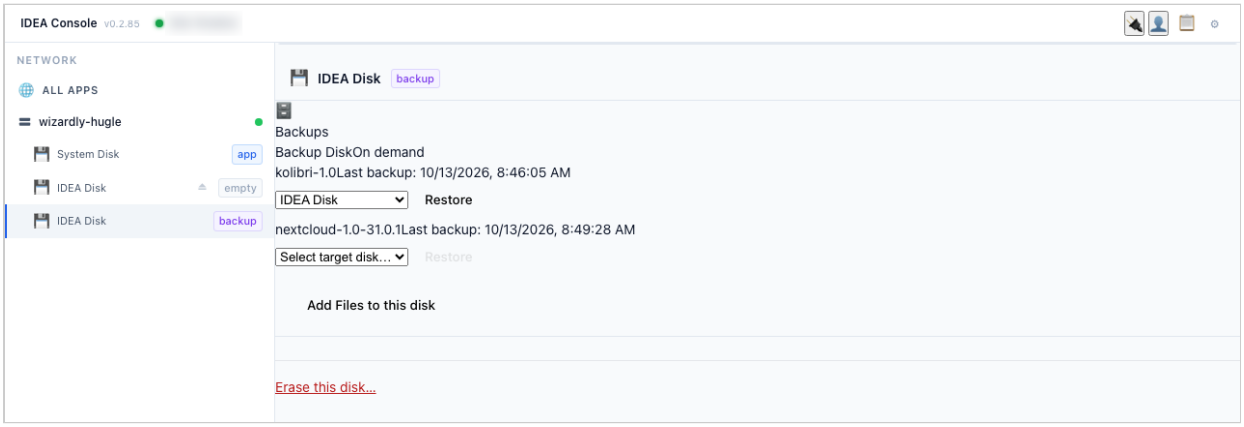

Figure 75. Target chosen

3. The Console asks: "Are you sure? This will overwrite **kolibri-1.0** on **IDEA Disk**." Click **Confirm Restore**.

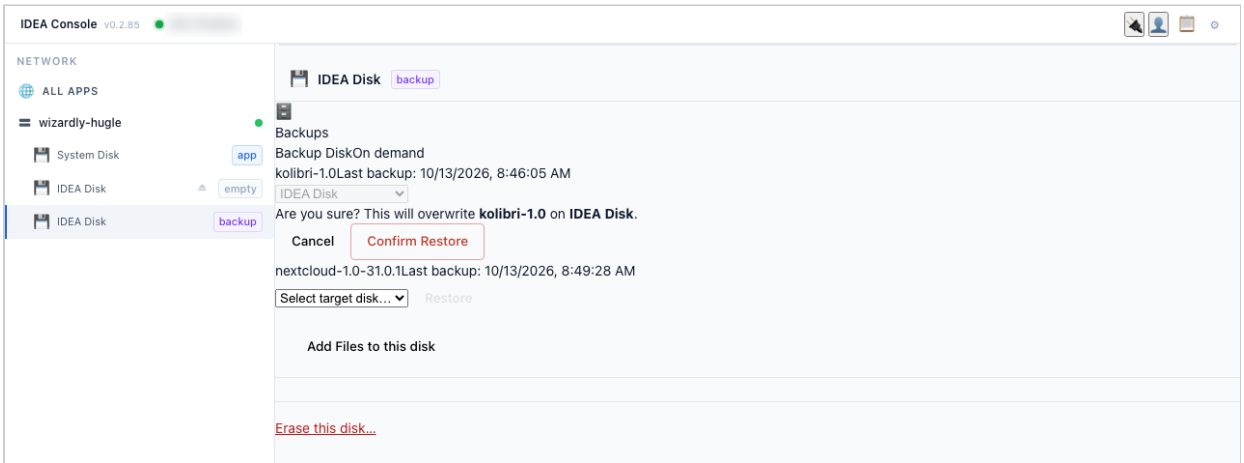

Figure 76. Confirm Restore

4. After about a minute the spare disk shows the **app** badge and lists the restored app.

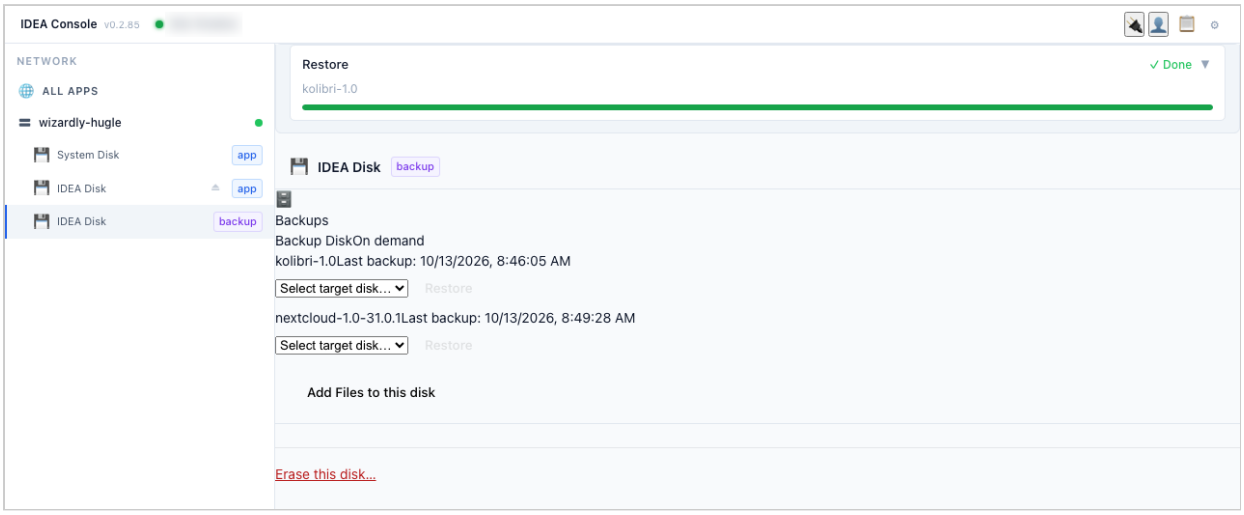

Figure 77. Restore running

> **Screenshot pending retake:** Restored Kolibri on the spare disk.

5. The restore **moves** the app: it is no longer listed on its old disk, and the restored app is **stopped** (orange dot, **Start** button). Until you start it, the app cannot be opened. A restore is for a real breakdown, not for practice on a working school box.

> **Screenshot pending retake:** System Disk after restore.

6. Click **Start** on the restored app's row. After about 30 seconds it runs again and the row shows **Open ↗**.

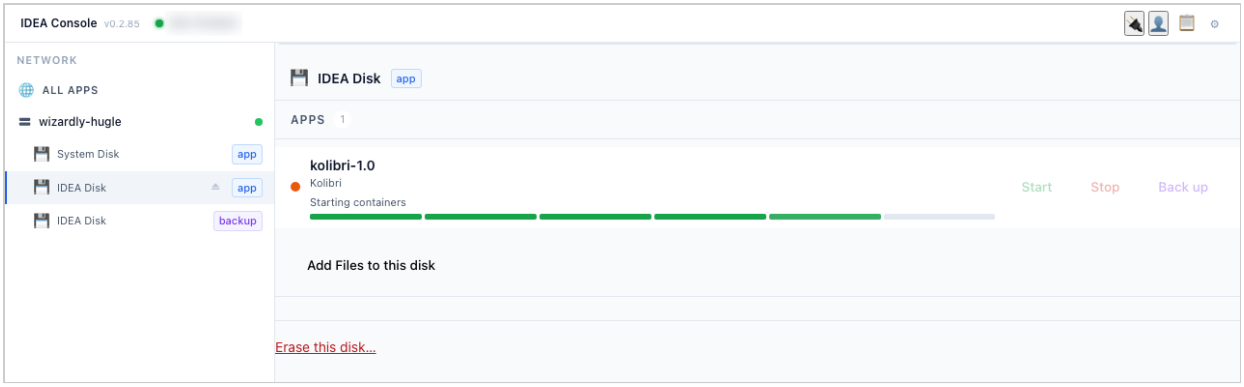

Figure 78. Start clicked

> **Screenshot pending retake:** Restored Kolibri running.

7. Open the app from its card on the **Apps** page (chapter 2) and sign in as a teacher.

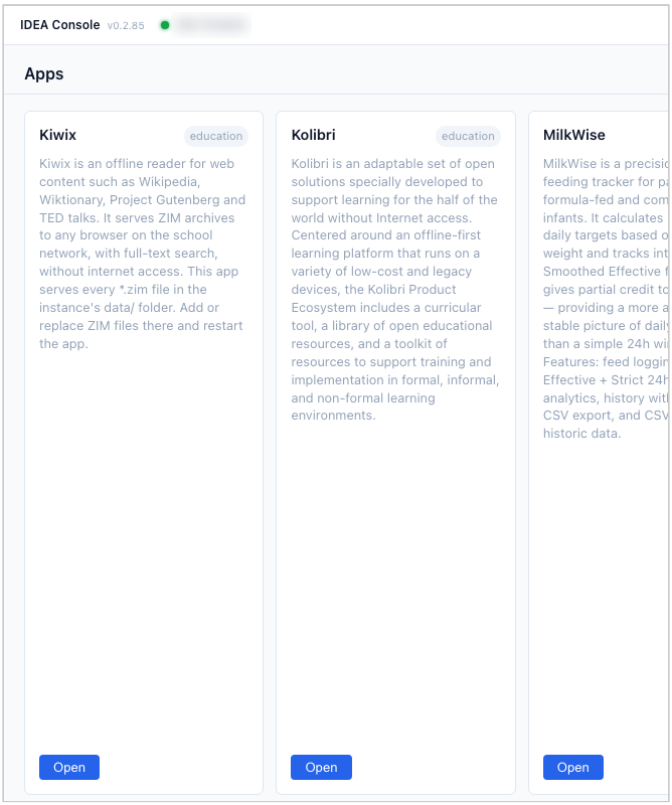

Figure 79. Apps page

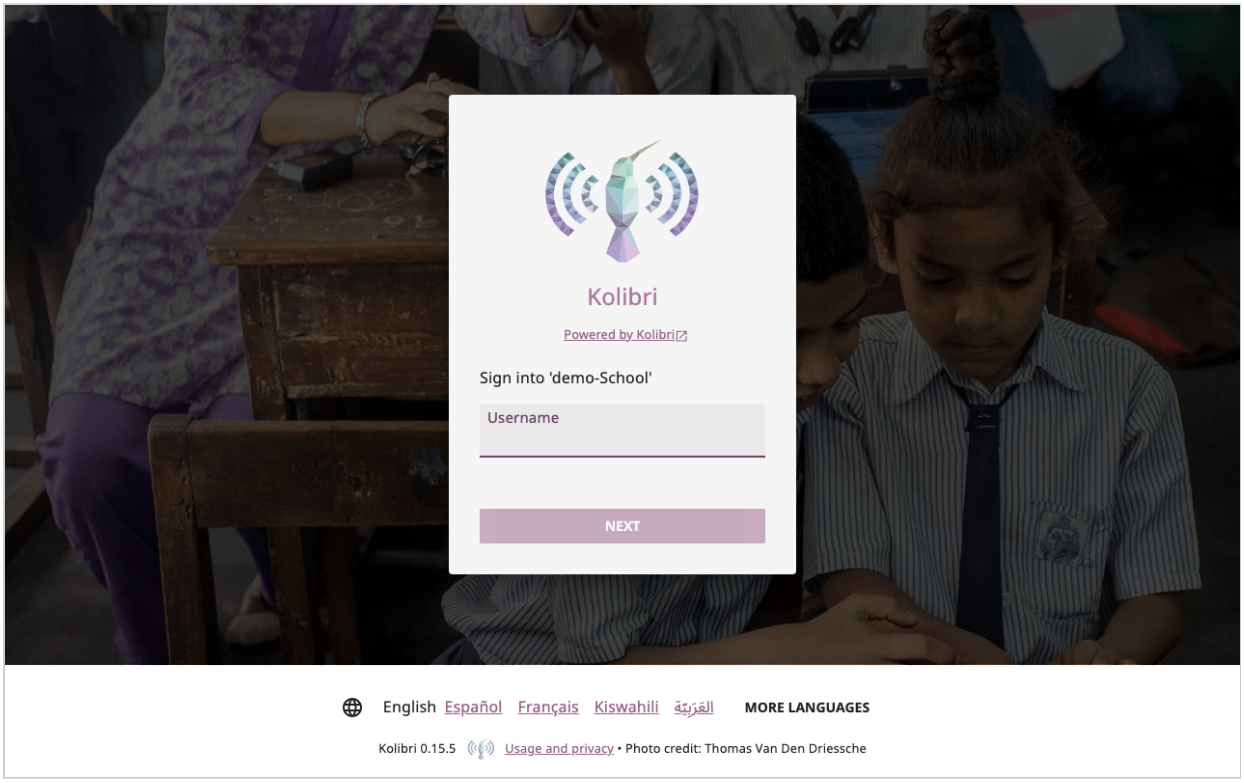

Figure 80. Kolibri sign-in

8. Check that the data is back: classes, learners, lessons, quizzes and reports, as at the last backup.

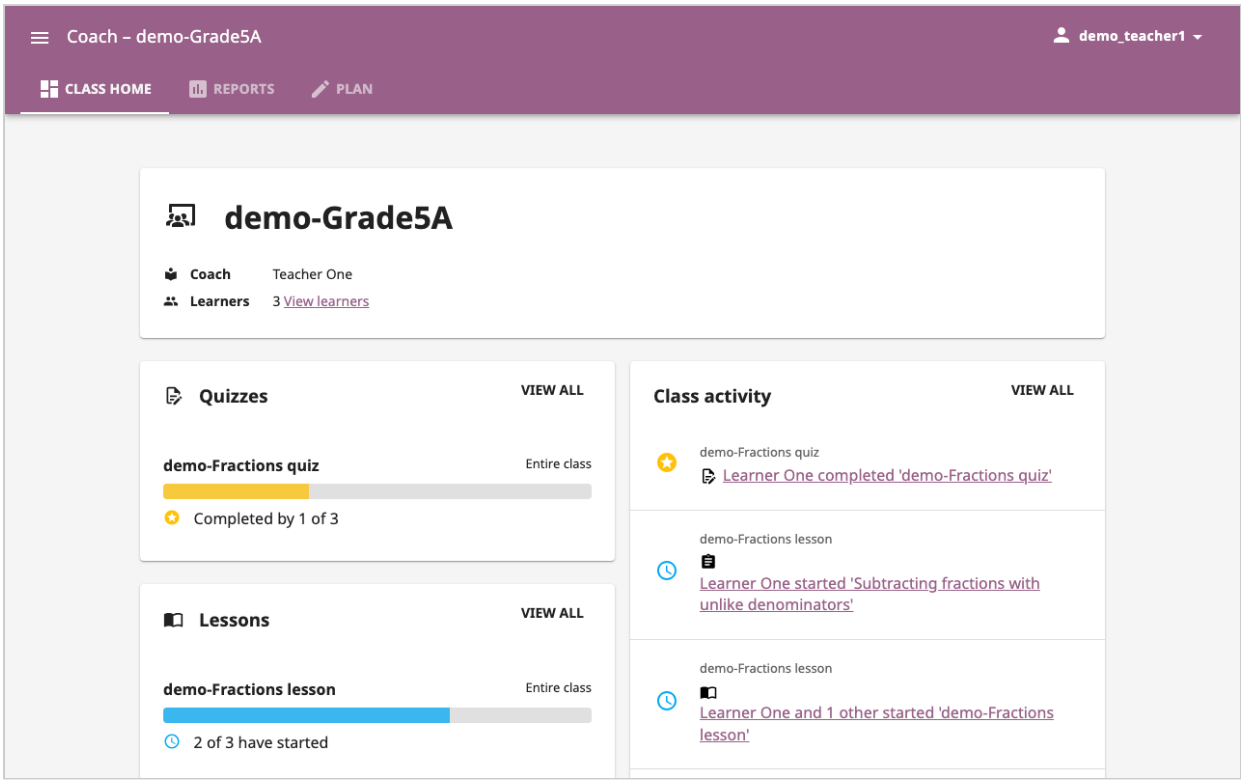

Figure 81. Class after restore

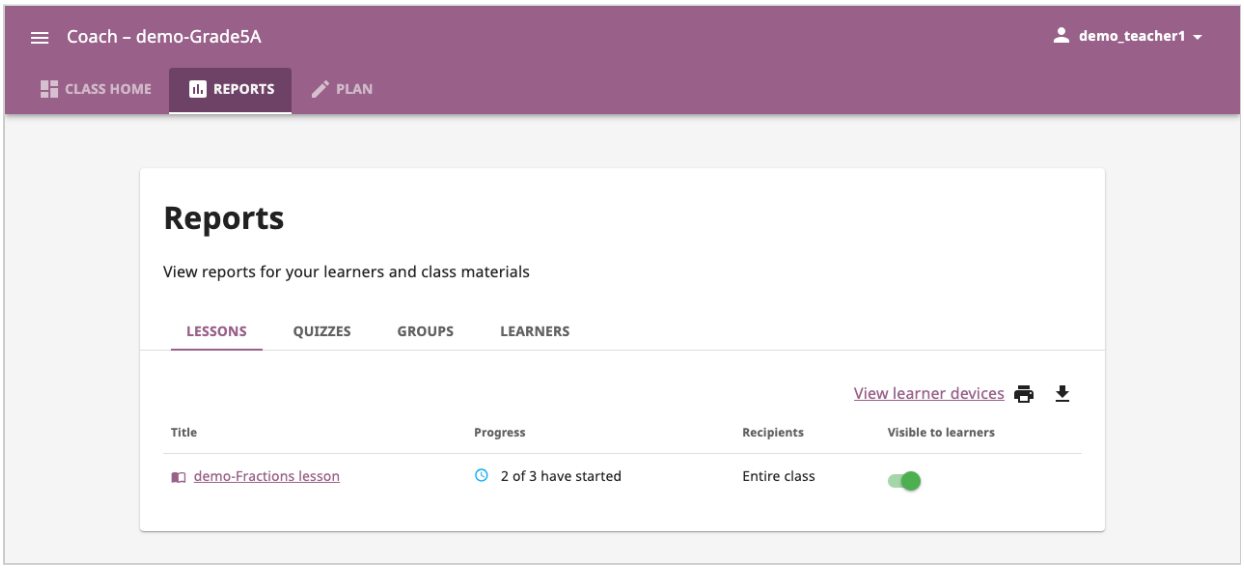

Figure 82. Reports after restore

Anything done after the last backup is lost. Make a new backup of the restored app as soon as it runs.

Appendix: demo accounts

These are the accounts used for the screenshots. Your IDEA contact gives you the demo passwords. Kolibri usernames use an underscore (`demo_teacher1`); Nextcloud usernames use a hyphen (`demo-teacher1`).

Username	App	Role	Used in
demo_admin	Kolibri	Kolibri admin	3.3 (shown in the enroll list)
demo_teacher1	Kolibri	Admin and coach of class demo-Grade5A	3, 11.7
demo_learner1	Kolibri	Learner in demo-Grade5A	4
demo_learner2	Kolibri	Learner in demo-Grade5A	4
demo_learner3	Kolibri	Learner, enrolled in 3.3	3.3
demo-teacher1	Nextcloud	Teacher (groups demo-Grade5A, demo-teachers)	5, 8
demo-teacher2	Nextcloud	Teacher (group demo-teachers)	5.2
demo-learner1	Nextcloud	Learner (group demo-Grade5A)	6, 8.2
demo-learner2	Nextcloud	Learner (group demo-Grade5A)	6.1

Demo content: Kolibri class **demo-Grade5A**, lesson **demo-Fractions lesson**, quiz **demo-Fractions quiz**; Nextcloud folders **demo-Worksheets** and **demo-Drop Zone**, document **demo-Lesson plan**.
