

MilkWise — Pricing Options & Income Estimates

Prepared by: Kit **Date:** June 2026

The Two Options

Option 1 — Three-tier model

Tier	Price	What you get
Free	€0	Feed logging, dashboard, 7-day chart
Pro	€4.99 one-time	Full analytics, CSV export, iCloud/Google Drive backup
Household	€1.99/month or €9.99/year	Everything in Pro + real-time co-parent sync

Option 2 — Two-tier model

Tier	Price	What you get
Free	€0	Feed logging, dashboard, 7-day chart
Pro + Household	€4.99 one-time	Everything: analytics, export, backup, co-parent sync

Key Assumptions

App store cut: 15% (first year for apps earning under \$1M — Apple and Google both apply this)

Usage window: Parents typically use a feeding tracker for 3-9 months. Average: 6 months.

Download projections:

Period	Conservative	Moderate	Optimistic
Year 1 avg/month	500	1,500	3,000
Year 2 avg/month	1,000	3,000	6,000

Conversion Rate Assumptions

Option 1

- **Free → Pro (€4.99):** 15% — modest because it's a two-step funnel; some users stop here
- **Pro → Household monthly (€1.99/mo):** 25% of Pro buyers — those with a co-parent who actively use the app together
- **Pro → Household annual (€9.99/yr):** 35% of Pro buyers — most who want sync prefer the annual deal
- **Avg Household active duration:** 6 months monthly / 10 months annual (churn: baby grows up)

Option 2

- **Free → Pro+Household (€4.99):** 25% — higher than Option 1 because it's a single decision, simpler pitch, and more perceived value for the same price

Revenue Per 1,000 Downloads (Lifetime Value)

Option 1

Revenue source	Calculation	Amount
Pro buyers	$150 \times €4.99$	€749
Household monthly (25% of 150 = 38 users $\times$ €1.99 $\times$ 6 months)	$38 \times €11.94$	€453
Household annual (35% of 150 = 53 users $\times$ €9.99 $\times$ ~1 renewal)	$53 \times €9.99$	€530
Gross per 1,000 downloads		€1,732
After 15% store cut		€1,472
Supabase infrastructure cost	~€0 (free tier to 50k MAU)	€0
Net per 1,000 downloads		€1,472

Option 2

Revenue source	Calculation	Amount
Pro+Household buyers	$250 \times €4.99$	€1,248
Gross per 1,000 downloads		€1,248
After 15% store cut		€1,061

Revenue source	Calculation	Amount
Supabase infrastructure cost	~€0 (free tier)	€0
Net per 1,000 downloads		€1,061

Annual Income Projections

Year 1

Scenario	Downloads	Option 1 (net)	Option 2 (net)
Conservative	6,000	€8,832	€6,366
Moderate	18,000	€26,496	€19,098
Optimistic	36,000	€52,992	€38,196

Year 2

Scenario	Downloads	Option 1 (net)	Option 2 (net)
Conservative	12,000	€17,664	€12,732
Moderate	36,000	€52,992	€38,196
Optimistic	72,000	€105,984	€76,392

Side-by-Side Comparison

Factor	Option 1	Option 2
Revenue per 1,000 downloads	€1,472	€1,061
Year 1 moderate scenario	€26,496	€19,098
Year 2 moderate scenario	€52,992	€38,196
Conversion complexity	Two decisions (Pro, then Household)	One decision
Recurring revenue	Yes — monthly subscribers	No
Infrastructure risk	Low — you get paid per active user	Higher — one-time fee funds indefinite sync
Pricing clarity	Moderate	Simple
Upgrade appeal	Good upsell message	

Factor	Option 1	Option 2
		"Everything for €4.99" is a strong hook
Long-term sustainability	Better — revenue scales with active users	Weaker — grows only from new downloads

Verdict

Option 1 earns ~39% more revenue at every scale — because the recurring Household subscription converts well and adds meaningful lifetime value per user without raising the entry price.

Option 2 is simpler to sell and will convert better at the top of the funnel, but it undersells the ongoing service. Providing indefinite cloud sync for a one-time €4.99 means you're funding Supabase infrastructure and support for free as the user base grows.

The risk of Option 2 is not the Supabase cost (free tier is generous) — it's that you lose the lever to grow revenue from an existing user base. With Option 1, every new co-parent household is a recurring revenue opportunity. With Option 2, they all paid once and you can never charge them again.

Recommendation: Option 1. The Household subscription is easily justified — "you're paying for the ongoing sync service, not the app." If conversion proves slow, you can always run a promotional period of "Pro+Household for €4.99" without permanently destroying the model.
